FOREWORD

THE chief purpose of the Municipal Year Book, now in its nineteenth year, is to provide municipal officials with information on the current problems of cities throughout the country, with facts and statistics on individual city activities, and with analyses of trends by population groups. Many of the sections are brought up to date and repeated year after year, and certain types of material are published in one edition only. This plan enables the Year Book to achieve continuity and balance and also to introduce some new material each year.

Final figures for the 1950 census of population are used in this edition of the Year Book and are shown for each city over 5,000 population in Table IV. The 2,319 cities shown in the 1951 Year Book have increased to 2,526 cities for this edition. Differences between preliminary and final census figures added seven cities, and 200 towns and townships in eastern states have been added as cities. These changes are described in the section, "Governmental Data for the 2,526 Cities over 5,000 Population."

New sections in this Year Book present individual city data on traffic safety and electric utilities and on revenue, expenditure, and debt for cities of 5,000 to 25,000. Some of the regular sections have been expanded to show new material. The city planning section, for example, contains extensive data on zoning and land subdivision.

Most of the regular features of the Year Book have been retained and brought up to date. Among such features are forms of city government, how the mayor and city council are selected, utilities owned and operated, salaries of chief municipal officials, pay rates for selected city jobs, number of city employees and payroll, personnel organization, working conditions, retirement systems, reporting to the public, city planning data, financial statistics, parking lots, fire and police data, directories of city officials, and model municipal ordinances.

Considerable emphasis is placed on the more significant municipal events and developments of the past year. The first article, "Our Cities in 1951," reviews and comments on the highlights of the year. Summary articles in each section analyze and comment on trends.

The individual city data presented in the 19 major tables are summarized and analyzed in articles that precede the tabulations. These comprehensive summaries, together with individual city data, enable officials to compare their city with other cities in their population group.

The sources of information that are listed at the end of each section are useful to public officials and to students of government. An explanation of the content of these sources and how they can be used to the best advantage is presented in the article "How to Use the Year Book" which also makes suggestions on the use of Year Book statistics.

Every section of the Year Book has been revised to contain the latest available data. In selecting new material the editors are guided by the suggestions of Year Book users and the most important problems facing local officials. The aim is to present as much information as possible within the limitations of the number of questionnaires which municipal officials can reasonably be expected to answer and the cost of compilation and printing.

The editors of the Year Book continue to rely heavily on the cooperation of many officials and of other specialists in the governmental field. Nearly five thousand municipal officials supplied data, the 48 state correspondents reported the most important developments affecting the cities in their states, and editorial consultants analyzed and interpreted developments in their special fields so as to give Year Book users a discriminating summary and comment on events and trends during the past year. Special contributors, various state and federal officials, and the headquarters staffs of professional and technical organizations provided invaluable assistance and advice. To all who assisted in the preparation of this nineteenth edition of the Municipal Year Book we express our sincere appreciation.

Our Cities in 1951

By Arthur W. Bromage

Professor of Political Science, University of Michigan, and Member of the City Council, Ann Arbor, Michigan

IN peace or war, municipal administration, the expression of our urban democracy, must continue to operate and go forward. The basic services which our cities perform are essential to the health, safety, and welfare of the American people. We cannot be strong internationally unless we are adequate in municipal government. It is our urban democracy which provides the "hardware" for our military strength so essential to the preservation of democracy everywhere. With the increased demands upon us for federal and state taxes, it is more than ever essential that municipal services be provided efficiently, at the lowest possible unit costs in the face of inflationary trends. A sound urban democracy contributes to our national safety.

The year 1951 found our cities seeking to strengthen the fabric of local democracy and to fulfill this mission. It was a fluid year with rapid shifts in costs and personnel. Once more a defense effort was changing state and local index figures to new levels in revenues and expenditures. This flexibility of the dollar-trend lines created an artificial sense of bouyancy. Actually, much of the so-called advances represented an adjustment in the value of the dollar, rather than a real and fundamental change in the service level of local government.

Forms of Government. The council-manager plan continued to gain rapidly in adoptions during 1951, as in other post-World War II years. The nationwide trend to this system demonstrated continuing interest in balancing representative democracy and professional management in American cities. For the first time in our history more than 1,000 places in the continental United States had adopted the manager plan. More than one-third (36.2 per cent) of the cities over 25,000 now have this form of government. The inception of the council-manager plan four decades ago had culminated in numbers of adoptions beyond the predictions of its proponents.

A new approach to the government of metropolitan cities was spelled out by Philadelphia during the year. There, voters adopted a strong-mayor charter with a managing director, charged with supervision of 10 line departments, under the mayor. To be sure, the Philadelphia charter was not a brand-new idea, but it was noteworthy for it so obviously attempted to fuse the integrated management core of the council-manager plan under the strong-mayor system. It was possibly not only our latest but also our best example of a council-mayor-manager plan for big cities. Only time could tell.

State Legislation. State capitols sheltered 44 regular legislative sessions in 1951, in the usual odd-year rush to set state and local democracy straight. Predominant in state legislative trends were social security and civil defense. Many states passed enabling acts to permit the inclusion of state and local personnel under federal old-age and survivors insurance, and patterned new or revised civil defense legislation after the model legislation of the Council of State Governments. In a half-dozen states highway-aid legislation emphasized increased state sharing of gas and other motor vehicle revenues with local units.

In municipal home rule, Rhode Island and Illinois scored the most notable advances. By constitutional amendment adopted in 1951, the former permitted cities to frame home-rule charters; the latter authorized the adoption of council-manager government by any city, except, of course, Chicago. States continued by permissive legislation to promote the diversification of municipal revenues from nonproperty tax sources.

Concerned with over-all problems of municipal corporations, state leagues of municipalities divided their time in 1951 between legislative activities and service-bureau functions. On a nation-wide scale the leagues continued to cooperate through the American Municipal Association. For the first time in history the state leagues had combined annual revenues in 1951 of more than one million dollars. Their combined membership reached a new peak when 41 state associations reported 11,019 members. It was increasingly apparent that municipalities recognize that there is strength in union. As the municipal league movement gained momentum, urban problems received more attention from state legislatures.

Administrative Organization. The most significant trend was the continued development of council-manager charters with integrated administrative structures. San Antonio became the fourth largest city to adopt the plan, after years of trial of commission government. A managing director was established under the strong-mayor charter of Philadelphia, and an administrative officer under the mayor was created by charter amendment in Los Angeles.

On the other hand, the continued development of "authorities" in Pennsylvania and other states was creating disintegration in local public administration. Local authorities stemmed from attempts to settle organizational and financial problems arising out of multiplicity of jurisdictions, or to surmount debt limits and management problems in individual local units. In Pennsylvania there were reported sewer, water, parking, school, flood control, and airport authorities, for example. It was clear that the continued development of authorities in many states called for detailed study and appraisal of this device.

An outstanding readjustment of local functions took place between the city of Atlanta and Fulton County, Georgia, under a state statute. The adjustments included annexation by Atlanta of 82 square miles of territory with a population of some 100,000, and a reallocation of functions to reduce duplication of services between city and county.

Reporting. More than 150 United States cities issued general annual municipal reports to citizens in 1951, publishing an average of one copy for every five citizens. This is double the number of such reports issued 10 years ago. The 1951 reports were more widely distributed, more timely, and shorter than their predecessors. In addition, 66 cities issued special leaflets or folders enclosed with tax or utility bills. Several cities made movies of municipal activities, and others held "open house" at the city hall. Officials in a number of cities used the radio or television as a means of reporting city activities to the public.

Civil Defense. The Korean incident of 1950 spurred our cities to the redevelopment of civil defense auxiliaries which had withered on the vine since World War II. During 1951 cities made substantial progress in rebuilding police, fire, and other civil defense corps. Signals were installed, communications systems established, auxiliaries recruited, and public education continued. This time the threat of the atomic bomb made civil defense more than an intra-city problem. The magnitude of potential disasters produced thinking and action in delineating mutual-aid areas to provide for inter-city cooperation.

The year was marked by many cross-currents in federal-state-local argumentation over fiscal responsibilities. Nevertheless, substantial progress was made by local units in planning and organizing for civil defense. Cities entered 1952 more adequately prepared for disaster, whereas in 1950 they had been wide-open to attack without civil defense preparations.

Planning. Renewed interest in planning was aroused by the federal policy of industrial dispersal, announced by President Truman during the summer of 1951. Emphasis was placed on the decentralization of new and expanding industries on satisfactory outlying sites which would provide reasonable military security. Many plants sought suburban or sub-metropolitan locations to obtain space for modern structures, dispersal from target centers in the event of bombing, parking facilities, and other advantages of outlying sites. City, county, and regional planning commissions were called upon to assist in finding decentralized locations for expanding defense industries.

The familiar pattern of defense workers on the move to new locations was being re-enacted. Urban fringe development had a new impetus, and concerned the operators as well as the planners in local government. To those who had witnessed similar migration and fringe growths in response to new industrial locations in 1941-42 it was not a new phenomenon but an old one repeated with variations.

On the zoning front, the courts continued to look with disfavor on regulations requiring a minimum area for residences. In Hitchman v. Oakland Township, 329 Mich. 331 (1951), the Supreme Court of Michigan declared invalid a local ordinance which required a minimum area of 800 square feet for residences and a minimum site area of three acres. In the field of industrial zoning the American Society of Planning Officials issued a set of standards which constitute a significant guide for officials.

Municipal Finance. Dollar-wise, municipal revenues and spending were still climbing in 1951, partially as a result of the new inflationary trends set in motion by the "Korean" incident. While figures are not yet available for 1951, some appreciation of their probable course can be obtained from data for 1950. In the nation's 474 largest cities revenue and spending of city governments increased by approximately 7 per cent in the fiscal year 1950 from 1949 figures.

Continuing construction in 1950 pushed the outstanding gross debt of these cities to $8,626,000,000 as compared with the 1949 total of $8,046,000,000, or an increase of 7.2 per cent. Capital outlay for these cities rose 12.1 per cent from fiscal 1949 to 1950, moving upward from $697,000,000 to $782,000,000. Evidence that these trends continued in 1951 comes from Bureau of the Census reports that local government debt in 1951 reached the record level of $20,667,000,000 as against a 1950 total of $18,830,000,000. To this increase, every major type of local government contributed, according to the Bureau of the Census.

During 1951 the post-World War II trend continued for states to authorize municipalities to diversify their revenue sources. At least 14 states passed local revenue legislation, five states allowed or extended the powers of some or all cities to make sewer service charges, and 13 states adjusted local tax limits. These illustrations of trends demonstrate that inflationary pressures in 1951 forced state governments to adjust municipal revenues in a variety of ways, all of which were designed to increase municipal dollars to pay for rising costs of personnel and material.

Assessed valuations and property tax rates rose concurrently over 1950 levels, but the adjusted average property tax rates decreased. Evidence still accumulated that assessments and tax rates were falling short of the inflationary spiral in property values. Perhaps this explains the dominant 1951 emphasis on state programs of assistance to local assessors in such states as Kentucky, for example, and other states, too, joined in the growing emphasis on improving initial assessments at the local level by state assistance and guidance. The NAAO survey of assessed valuations in larger jurisdictions indicates that urban assessors are by no means keeping pace with inflation.

Personnel. The accelerated defense program and inflation had a marked effect on personnel administration in 1951. At state and local levels the effects were: increased difficulty in recruiting to fill vacancies; higher rates of turnover; and insistent demands of employees for pay raises. State and local governments employed 4,287,000 in October, 1951, up only 2,000 in a 12 month period. Thus 1951 witnessed the end of the post-World War II rise of more than 1,000,000 in state and local governmental employees. Losses to the armed forces and to defense industries tended to stabilize state and local employee rosters.

Considerable emphasis was placed in 1951 on in-service training for administrative personnel in city halls. Group training by the conference method was carried on in a number of cities and individual officials enrolled in correspondence courses offered by the Institute for Training in Municipal Administration, conducted by the International City Manager's Association.

Group life insurance, hospital, and medical plans were adopted by a number of cities. The human relations approach in dealing with public employees received much emphasis. Continuing a trend of recent years several cities issued attractive employee manuals to inform city employees of personnel rules and working conditions. By the end of the year more than 30 states had approved plans to bring state and local employees under the federal social security plan and cities in numerous states were entering into such agreements.

Police Administration. There was a resurgence of interest in the fight against organized crime. Many cities organized their own crime commissions, some of which were privately organized and financed by citizens. Among these local crime commissions were those in New York City, Chicago, St. Louis, Dallas, Miami and Tampa. In Alabama, Arkansas, California, Missouri and Texas, legislatures acted to create crime commissions; governors created investigating committees in Colorado, Maine, and New York.

Routine police administration continued to be an expanding operation. During the first six months of 1951, there was an increase in Part I crimes of 5.1 per cent in cities. Continuing emphasis was noted in police training with numerous universities expanding old or developing new courses of the short-term type. Pittsburgh, San Antonio, and Des Moines reported reorganization surveys by consultants. Increased use of one-man patrol cars was made in Denver, Des Moines, San Francisco, and other cities.

In the course of the year the Kefauver Committee completed its investigation and issued a Third Interim Report delineating the interstate character of organized crime. The committee indicated that the federal government had a major and vital responsibility, for criminal gangs and syndicates had nation-wide ramifications. Federal responsibilities extended, according to the committee, to seeing that channels of interstate commerce, transportation, communication and the United States mails were not used to facilitate operations of criminal gangs and syndicates, and to effective use of existing federal powers. On the other hand, the committee pointed to the fundamental roles of state and local law enforcement agencies in dealing with organized crime, especially in metropolitan counties.

Traffic Administration. Traffic continued to be a principal problem. Motor vehicle registrations in 1951 stood at 52 million, more than 50 per cent higher than the pre-World War II peak of 1941. Preliminary estimates of vehicle mileage were over a million miles a minute. The cost in human life of highway accidents was emphasized in 1951 by the millionth traffic death in the nation. Officials of most states and many cities undertook comprehensive traffic studies and took action in a variety of ways to strengthen official coordination among traffic safety organizations and in accident-prevention efforts. Traffic engineering, enforcement and education were still part of the annual battle against loss of life and property damage in our urban streets.

At the end of the year 484, or 43 per cent, of the cities over 10,000 population owned and operated one or more off-street parking lots in their central business districts. This is an increase of 96 cities, or 20 per cent, in the number of cities as compared with 1950. Another trend is that an increasing number of cities made a charge for parking, the lots being equipped with parking meters. Some of the larger cities were concerned in 1951 with the construction of expressways for the more efficient handling of through traffic.

Fire Administration. Fire losses and fire casaulties were still of major concern in 1951. Estimates of fatalities from fire in the United States and Canada were approximately 12,000. Preliminary estimates of property loss stood at $742,000,000 in buildings and contents and $81,500,000 in outdoor fires, compared with $699,600,000 for the former and $76,840,000 for the latter in 1950. Total unadjusted dollar value figures for fire loss in 1951 were $823,500,000, greater than any previous year. Taking inflation into account, the record is better. In terms of property destroyed, it is considered that we are better than holding our own.

Expansion of fire prevention work has continued; in 1951 a special campaign was undertaken by the International Association of Fire Chiefs to reduce child fatalities in fires. This campaign was specifically directed to the inspection of dwellings by fire departments, a procedure demonstrated to be effective in cities instituting inspection of dwellings as well as of downtown and industrial areas. The 1951 edition of the National Electrical Code was widely adopted. The National Education Association issued manuals on fire safety for elementary and high school teachers.

A notable development was the widespread interest among the smaller cities in an integrated public safety department in which the same men perform both police and fire duties. This was due in part to the wide publicity given to the successful experiment at Sunnyvale, California, a city of 11,000 population.

Public Works. As 1951 lengthened, improvements began to suffer setbacks because of material shortages and higher construction costs. Yet, even under conditions of increasing difficulty, state and local public works activity was at an all-time high of almost six billions in new construction.

Money borrowed and pledged to capital improvements often is the end result of public referenda. So emphasis in 1951 was on completion of projects underway and for which commitments had been made in financing and contracting. School, hospital, electric light and power (private and public), and state and local sewage disposal and water supply facilities registered new dollar-volume peaks for construction.

It seemed likely that 1951 marked a turning point, and that higher costs and shortages would force a retrenchment from these peaks in 1952. Cities had to place continuing emphasis on mechanized operations as the manpower shortage developed and hand labor became more costly. This process of mechanization has produced new problems in garage and storage space for municipal vehicles.

Public Health. The unending battle against disease and preventable deaths was waged with the customary vigor by public health administrators. Favorable mortality rates were maintained in 1951. Further decreases were recorded for infant and maternal deaths and for several communicable diseases, including tuberculosis. On the other hand, the 1951 epidemic of poliomyelitis was second only to that of 1950. Birth rates changed only slightly. Cities continued to advance in the fluoridation of water supplies as a preventive measure to diminish dental caries. In local unit organization to promote public health administration, the trend to county and multi-county health units continued.

At the close of 1951 there were 766 Hill-Burton hospitals under construction, compared with 781 completed and placed in operation since the inception of the program some five years ago. The trend to cease pollution of our water resources continued.

Public Welfare. A notable bench mark was reached in public welfare administration. More old people were receiving some income for the first time from the contributory system of federal old-age and survivors insurance than from state old-age assistance based on a means test. This was deemed remarkable in view of the rapid growth of the aged population potentially eligible for public assistance in relation to total population growth. As 1951 closed there were 3.3 million aged insurance beneficiaries and 2.7 million old age assistance beneficiaries. At the same time funds available for payment of state unemployment benefits approached the $8 billion mark. Some 62.3 million persons were insured under the federal old-age and survivors insurance systems.

Parks and Recreation. For recreational administrators, the year 1951 marked a return to World War II problems with some variations. National Production Authority controls tightened, bringing construction of recreational facilities to a virtual standstill. On the other hand, further mobilization gave rise to increased demands for recreation; the armed forces and civic officials again faced the problem of armed forces personnel on leave in communities near large military installations.

Once more cooperative planning and action was undertaken between the military authorities, the communities involved, and such national voluntary agencies as the USO and the National Recreation Association. Recreation for defense workers assumed a high priority. Congress passed Public Law 139, authorizing the appropriation of federal funds for housing and community facilities and services in regions officially designated as "critical defense areas." Community recreation facilities and services are among those authorized by this legislation.

Schools and Education. The year 1951 produced further evidence of a continued increase in school enrollments resulting from the World War II babies and postwar babies. It has been estimated that there will be by 1960 over seven million more children in school than were enrolled in 1949-50. With elementary school enrollments up by 800,000 in 1951-52, the need for more buildings and more teachers was becoming imperative.

Increasing needs of school districts for capital improvement programs, expanded personnel, and higher salaries, are concurrent with the fiscal problems of cities in an inflationary period. It is not only the cost of municipal government but the total cost of city, county, and school administration which is significant to the taxpayers in local areas. The year 1951 made even more obvious the necessity for greater coordination between cities and independent school districts in planning for capital improvements, bond issues, and over-all local government expenditures.

School district reorganization continued to be a significant phase of educational administration. A 1951 report, "Reorganization of School Districts," published by the Bureau of Public Administration, University of California, showed that the number of school districts in the United States was reduced 33.8 per cent from 1932 to 1950. The states achieving the largest reductions percentage-wise were West Virginia, Arkansas, Idaho, Washington, Illinois, and Oklahoma.

How to Use the Year Book

CONTENT AND ARRANGEMENT

THE purpose of this introductory section is to present a brief explanation of the contents and arrangement of material in this Year Book and to make a few suggestions regarding the use of statistical data. All material dealing with each municipal function or activity is brought together in one place. In conformity with this idea, Part II is devoted entirely to matters of personnel and Part III to finance. Data relating to operating departments have all been included in Part IV, but within this general grouping all material relating to each individual activity is segregated. In addition, there are three other principal sections: preceding this article is a general summary of municipal developments in 1951. Part I which follows presents data regarding local governmental units as such, while Part V contains the directories of officials.

The arrangement of materials within these major parts may be illustrated by a glance at Part III, dealing with municipal finance. At the beginning of Part III are short articles reviewing the developments during the year in municipal financial administration, assessment, purchasing, and revenues, expenditures, and debt. Following some of these summary articles are the individual city statistical data. Next are presented sources of information, which are designed to guide the user to (1) sources of municipal finance statistics; (2) selected standard reference; (3) new books, pamphlets, and reports published in 1951 and early 1952; and (4) selected periodicals.

Summary Articles on 1951 Developments. The articles at the beginning of Parts II and III and at the beginning of each activity in Part IV cover only the more significant events and developments in 1951 and were prepared for the Year Book by the editorial consultants of Public Management.

Individual City Statistics. Most of the data for individual cities shown in the tables were obtained directly from city officials by questionnaires sent out by the International City Managers' Association, by other national organizations, or by federal agencies. Other statistical data were supplied by various governmental or private agencies with the source given at the beginning of each table. Summary articles preceding the individual city data indicate trends and should be read when using the tables.

Sources of Information. Four types of information are presented in most of the sections in Parts II, III, and IV, in the following order:

1. Sources of Statistics. The items listed under this heading for each function include recent compilations of municipal statistics for individual cities, which are in most instances nationwide in scope. Except for a few recent publications, the items listed are restricted to periodical sources and to compilations which include cities in more than one state. The individual city data included in each publication are briefly described, together with the number of cities included and their population range.

2. Selected Standard References. In this section are listed for each function the standard references which have been published in recent years and which form the basis of a working library in the administration of that function. The items were selected on the basis of their value to the administrator.

3. New Books and Pamphlets. Only the more important books, pamphlets, and reports issued in 1951 and early in 1952 are listed. Included also are a few items with a 1950 publication date which came to the attention of the Year Book editors after the 1951 edition went to press. Publications of the years 1933 to 1950 and early 1951 are listed in previous editions.

4. Selected Periodicals. The most important periodicals in each field are the best sources of information on current developments, practices, and procedures.

Model Ordinances. At the end of Part IV is a section on "Selected Model Municipal Ordinances" which has proved useful to officials. Municipal officials who wish to obtain a model ordinance on any particular subject should look first of all to the league of municipalities in their state. Many of the states have up-to-date ordinances on practically every phase of municipal activity. While especially prepared for use by cities in a given state, the provisions often are applicable to similar situations in other states. Some of the best model ordinances are prepared by federal agencies or national groups, but it should be borne in mind that they frequently may not be in accord with state laws. City officials will do well to consider carefully the provisions of model ordinances in adapting them to local needs and conditions before adoption. Some model ordinances may be too comprehensive for small cities. Special provisions to be included in any local ordinance can be determined only by the officials in each city. Also helpful are the compiled ordinances or codes of cities which have issued such volumes in recent years. Some of these cities are listed on the first page of the model ordinance section.

Directories of Municipal Officials. Part V contains directories of chief officials in cities over 10,000 population, of city managers, and of mayors and city clerks in cities of 5,000 to 10,000 population arranged alphabetically by states. Census figures for 1950 are used.

POPULATION FIGURES AND SELECTION OF CITIES

Final figures from the 1950 federal census of population are used for the first time in the Year Book. Preliminary 1950 census figures were used in the 1951 Year Book and 1940 census figures in the 1950 Year Book. Note comparisons with data in prior Year Books on per capita or other population bases should therefore be made with caution.

The Year Book gives some information for all 2,316 cities and other incorporated urban places over 5,000 population in the United States. In addition 200 of the 401 towns in New England and townships in Pennsylvania and New Jersey were selected as "cities" by the editors of the Year Book in accordance with standards described in the section "Governmental Data for the 2,526 Cities over 5,000 Population." These 200 towns and townships are not classified by the United States Bureau of the Census as either incorporated or unincorporated urban places and were not shown in the 1951 Year Book.

The final population figures for all 2,526 cities over 5,000 are taken from the Bureau of the Census advance reports (Series PC-8, Nos. 1-49) and are listed alphabetically by population groups in Table IV. The 2,526 cities are listed alphabetically by states in Tables XVIII and XIX. Other final 1950 census data on urban population are described in the articles "Urban Places and Population" and "Metropolitan and Urbanized Areas" in Part I of the Year Book.

USE OF STATISTICAL DATA

An uninterpreted or misinterpreted statistical table will inevitably lead —whether intentionally or unintentionally—to mistaken conclusions. In order to interpret the statistical data in this Year Book properly and to arrive at correct conclusions, the user must observe a number of cautions. An intelligent approach to the use of the information calls for a careful study of both the table heading and discussion prefacing each table.

Averages and Quartiles. Most tables presented in this volume summarize data for all the cities of a given population group. The correct use of such data involves an understanding of the summarizing devices which have been employed. In many cases an average is shown. The average of an index for a group of cities is intended to represent the typical value of the index for those cities. In addition to the familiar arithmetic average or mean, the median has also been used. The median designates the value of the middle item in a series of items arranged in order of increasing size; i.e., one-half of the items fall above, and one-half below the median. To illustrate the distinction between median and average, suppose five persons have wages of $3.00, $4.00, $5.00, $7.00, and $11. The average is $6.00, the median is $5.00. An average, whether it be an arithmetic average or a median, is only a measure of the typical, or usual case. It is in no sense a standard. The average number of employees in 1949 in cities over 500,000 was 17.1 per 1,000 population. This does not mean that cities of that size should have that precise number of employees, but that the average city did have that number.

Of equal importance are measures of dispersion which show how closely the individual items adhere to the average, or how widely they are distributed about the average. The four measures of dispersion that have been used here are (1) the lowest item, (2) the first or lower quartile, (3) the third or upper quartile, and (4) the highest item. The lowest and highest items are self-explanatory and indicate the total range covered by the items. When the items are arranged in order of increasing size, the first quartile is that value below which one-quarter of the items fall, and the third quartile is that value below which three-quarters of the items fall. Thus a tabulation of salaries of police chiefs in a previous Year Book showed the lowest item to be $1,980; the first quartile to be $2,562; the median $3,000; the third quartile $3,600; and the highest item $6,000. In other words, all the chiefs received $1,980 or more, one-fourth received $2,562 or less, one-fourth received at least $2,562 and not more than $3,000, one-fourth received at least $3,000 and not more than $3,600, and one-fourth received at least $3,600 and not more than $6,000. It should be realized that several cases may be grouped at the value of a quartile or median; in this example, 20 chiefs might receive $3,000.

Comparison of the statistics of an individual city with the average will only indicate whether it is out of line with usual practices and suggest the need for further analysis of operations. Comparison with quartiles and range will indicate how far the city departs from the typical and will help to determine whether the deviation is of sufficient magnitude to be significant.

Kinds of Statistical Measures. To know whether a high or a low value of a particular statistical index is a symptom of "good" administration, the significance of that index must be understood. For example, a table showing the total value of burnable property in a city measures the magnitude of the governmental problem facing the fire department; while a table showing fire losses per $1,000 of burnable values measures the adequacy of the results achieved by the department. Sometimes the activity of a department is measured in terms of work units performed (miles of streets swept, for example) instead of results (cleanliness of streets).

These measures of governmental service give an indication of the efficiency of the department's administration only when the effort (men and equipment employed), or money expended is taken into consideration. That is, one city may be satisfied to maintain a moderate fire loss with a low expenditure for the fire department, while another, desiring a higher municipal "standard of living" may work for a lower fire loss by the expenditure of larger sums for fire protection. The fire departments in the two cities may be equally efficient.

Before he uses any statistical index, then, the reader should satisfy himself whether it measures cost, effort, adequacy of results or performance (service in relation to the problem magnitude), or efficiency of results or performance (service in relation to its cost). The summaries preceding each table generally describe the statistics from this standpoint.

Per Capita Data. One additional measure deserves special consideration. This is the measurement index reduced to a per capita basis. It is often assumed that by reducing statistics to a per capita basis valid comparisons between cities can be made. Statistics are reduced to a per capita basis because population is a rough measure of the magnitude of the governmental problem. Therefore an index reduced to a per capita basis will have the same significance as if it were divided by some other measure of problem-magnitude. An index of results reduced to per capita will be a measure of adequacy of service.

The usefulness of such an index is severely limited by the fact that population is only a very crude measure of problem-magnitude. Fire risk, for instance, is related directly to the amount and type of burnable property and only indirectly to population. The per capita fire risk will therefore vary with valuation per capita and types of property, and per capita fire loss is only a very approximate measure of adequacy of service.

Measures of performance per capita, effort per capita, and cost per capita are even more severely limited in their usefulness. Since they fail to measure the level of service they are in no sense indexes of efficiency. A high per capita cost may indicate (1) that population does not adequately measure problem-magnitude, that is, that climatic, structural, economic, social, or other extragovernmental factors affect the problem; (2) that the level of service provided is high; (3) that the activity is being inefficiently administered. However, if care is taken to compare cities which are similar in type and situation, and if allowance is made for unusual conditions, then per capita statistics can be very useful to the administrator in focusing attention on problems and suggesting questions to be answered by further investigation.

Other Limitations of the Statistics. The statistics presented here should not be used without a full recognition of their limitations. In almost all cases the original data have been compiled from questionnaires returned by individual cities, and there is little or no uniformity in the local records systems from which replies to the questionnaires are compiled. Furthermore, questions may be differently interpreted by the persons answering them. Every attempt has been made, however, to increase the accuracy and validity of the statistics by cross-checking data derived from different sources and by following up questionable returns.

The problem of comparability has already been raised. Another factor in comparability is the variability in organization and functions of city governments. Services which are normally provided by counties in one part of the country may be provided by cities in other states. The line of demarcation between private and public facilities may also shift from one city to another.

Proper Use of the Statistics. With all these limitations on their use, what good are the statistics, and what justification is there for publishing them? First of all, summary figures for various population groups are valuable as indicating trends in costs, performance, and accomplishments. Second, it is useful to compare the figures for individual cities with the averages for cities of similar size as a starting point for further analysis. If a city is employing many more employees per 1,000 population than the average, it must find valid justification in unusual climatic or other conditions, superior and more extensive services, or conclude that employment is excessive. The latter conclusion should lead the city to search for the precise cause and possible remedy. Third, with due care the information for individual cities enables city officials to make comparisons with other cities similarly situated. An official of an industrial city of 100,000 population can make comparisons with other cities of the industrial type and of similar size. Fourth, the information for individual cities can be significantly combined with other data which may be at hand. The annual budget of a personnel agency acquires new significance if related to the number of employees. Information regarding individual departments helps to explain aggregate data for the government as a whole.

INDEX

The index in this volume includes all subject material in detail, column headings to all tables, and authors of articles, but not names of cities or officials. Data for individual cities will be found in the tables indexed by subject; officials are listed in the directories by city office held. The index is intended to direct the reader to details of information.

PART ONE

GOVERNMENTAL UNITS

Number of Governmental Units

Urban Places and Population

Metropolitan and Urbanized Areas

Metropolitan and Fringe Area Developments

Governmental Data for Cities Over 5,000

State Municipal Leagues

Number of Governmental Units*

THE total number of governmental units in the United States in 1951 was 119,465, as compared with a total of 155,116 in 1942, according to the United States Bureau of the Census. Local school districts, numbering 70,452, made up three-fifths of the 1951 total. In addition to the federal government and the 48 state governments, there were 48,964 local governments other than school districts (see Table 1). The average number of governmental units per state was 2,489, but Delaware had only 70 while Minnesota had 9,309. Illinois was next with 8,594 and Nebraska third with 8,318 units. Six other states with more than 5,000 local governmental units were Kansas, Wisconsin, Missouri, Michigan, Iowa, and Pennsylvania (see Table I). These nine states which had over 5,000 governmental units each accounted for more than one-half of the total number of governmental units in the nation. Eight of the nine had numerous town or township governments and all had large numbers of local school districts.

TABLE 1

TYPES OF GOVERNMENTAL UNITS IN THE UNITED STATES: 1942 AND 1951

Type of Government	Number of Units 1951	Number of Units 1942	Per Cent Change
U. S. Government	1	1	0.0
States	48	48	0.0
Counties	3,049	3,050	(1)
Municipalities	16,677	16,220	2.8
Townships	17,338	18,919	-8.4
School districts	70,452	108,579	-35.1
Special districts	11,900	8,299	43.4
Total	119,464	155,116	-23.0

[1] Less than .05 per cent.

The number of governments has declined 23 per cent since 1942. The most striking change was the elimination of 38,127 school districts—a reduction of more than one-third (see Table 1). The number of townships also decreased. The number of special districts, on the other hand, increased 43 per cent in number during the nine-year period and the number of municipalities increased 2.8 per cent.

---

*This article is based on a report, entitled Governments in the United States in 1951, a 10-page report issued in March, 1952, by the United States Bureau of the Census, Governments Division (Allen D. Manvel, Chief) based on a survey supervised by Mrs. Gertrude Whitehouse under the direction of Robert Drury, Assistant Chief of the Division. For a more detailed discussion of trends in local government units, see William Anderson, Units of Government in the United States: An Enumeration and Analysis (Chicago: Public Administration Service, 1949). 50 pp.

Table I

NUMBER OF GOVERNMENTAL UNITS, BY STATE: 1951

This table includes all governmental units in the United States as defined by the United States Bureau of the Census. It is reproduced with permission from the Bureau's report, "Governments in the United States in 1951" (State and Local Government Special Study No. 29) issued in March, 1952.

State	All Governmental Units [1]	Local Governments Except School Districts					School Districts
		Total	Counties [2]	Municipalities	Townships and Towns	Special Districts	
Alabama	531	422	67	300	...	55	108
Arizona	379	107	14	44	...	49	271
Arkansas	1,156	733	75	380	...	278	422

---

[1] Includes federal government and the 48 states.

[2] Number of county governments excludes 54 areas corresponding to counties but having no organized county government.

Definition of Governmental Units. A governmental agency was counted as a unit of government if it is an "organized entity having governmental attributes and sufficient discretion in the management of its own affairs to distinguish it as separate from the administrative structure of any other governmental unit." To be regarded as a government any entity must possess all three of the attributes reflected in this definition: the existence of an organized entity; governmental character; and substantial autonomy.

Evidence of existence as an organized entity is the presence of some form of organization and the possession of some corporate powers such as perpetual succession, the right to sue and be sued, have a name, make contracts, acquire and dispose of property, and the like.

Governmental character is indicated where officers of the entity are popularly elected or appointed by public officials. A high degree of responsibility to the public demonstrated by requirements for public reporting or for accessibility of records to public inspection is also taken as critical evidence of governmental character. Governmental character also is attributed to any entities having power to levy property taxes, power to issue debt paying interest exempt from federal taxation, or responsibility for performing a function commonly regarded as governmental in nature.

Substantial autonomy is met where an entity has considerable fiscal and administrative independence, such as the power to determine its budget without review and detailed modification by other local officials or governments, to determine taxes to be levied for its support, to fix and collect charges for its services, or to issue debt without review by another local government. Accordingly, an agency is classified as an independent unit of government if it has independent fiscal powers and in addition has a popularly elected governing body, has a governing body representing two or more state or local governments, or if the governing body is appointed and it performs functions that are essentially different from those of, and are not subject to specification by, its creating government. A more detailed discussion of characteristics for the classification of governmental units is presented in the Bureau's report upon which this article is based.

Counties. All of the states except Rhode Island have organized county governments; in Louisiana the term "parish" is applied. The count of 3,049 independently organized county governments does not include 12 counties which are not independently organized such as the city-counties of Denver and San Francisco, which are counted as cities; five counties in New York City which are counted only as the city of New York; Philadelphia County, counted as city of Philadelphia; Suffolk County, counted as city of Boston; Nantucket County counted as town of Nantucket; and also 42 areas which lack county government. These latter areas include independent cities, such as 24 cities in Virginia and the cities of Baltimore and St. Louis, which are not part of the counties in which they are located; and also certain unorganized areas in Rhode Island, South Dakota, Idaho, Montana, and Wyoming, some of which have county designations but none of which have county government because they are attached to other counties for governmental purposes, operate primarily as a city (e.g., District of Columbia), or are not organized for local government (Yellowstone National Park).

Municipalities. There were 457 more municipalities in the United States in 1951 than in 1942 because of new incorporations during the nine-year period. The term "municipalities" as used here includes all governmentally active units officially designated as cities, boroughs, villages, or towns (except towns in New England, New York, and Wisconsin). Illinois has more municipalities than any other state followed by Pennsylvania and Iowa, each of which has more than 900 (see Table I).

Townships and Towns. Classified under this heading are "townships" which are found in 22 states and "towns" in the six New England states and in New York and Wisconsin, and some "plantations" in Maine. Only 11 of the 22 township states have township governments blanketing all rural areas in the state. Township organization generally is restricted to the Northeastern and North Central states. By general law in New England, New Jersey, Pennsylvania, and to some degree in New York and Wisconsin, townships (or "towns") are vested with rather broad powers and, where they include urbanized areas, perform many functions commonly associated with municipalities. Unorganized township areas and townships where city governments have absorbed the township functions were excluded from the count. In Iowa, for example, county governments have absorbed nearly all former township functions and were not counted.

School Districts. In 26 states the school districts are independent governmental units. At the other extreme, in five states there are no independent school districts and local schools are administered by the state, county, city, or town government. A "mixed" system is found in 17 states having some independent school districts and some school systems administered by other governments. The number of school districts shown in Table I excludes the dependent school districts and also the subdistricts of larger school districts.

The bulk of the school districts are the small rural districts which provide only elementary instruction and are found in large numbers in the North Central states. During recent years there has been a marked reduction in the number of school districts and many states have passed reorganization laws to facilitate consolidation, annexation, and abolition of districts. States which have decreased the number of school districts by more than 50 per cent since 1942 are Arkansas, Illinois, New York, Oklahoma, Texas, Idaho, and Washington.

Special Districts. These units make up the most varied and the least known and recorded areas of local government. Every state has some special districts, ranging from one in Delaware to 1,341 in Illinois. California comes next with 1,305, followed in order by Missouri, New York, Kansas, Washington, Texas, and Nebraska each of which has more than 500 special districts. These eight states account for nearly three-fifths of all such local governments.

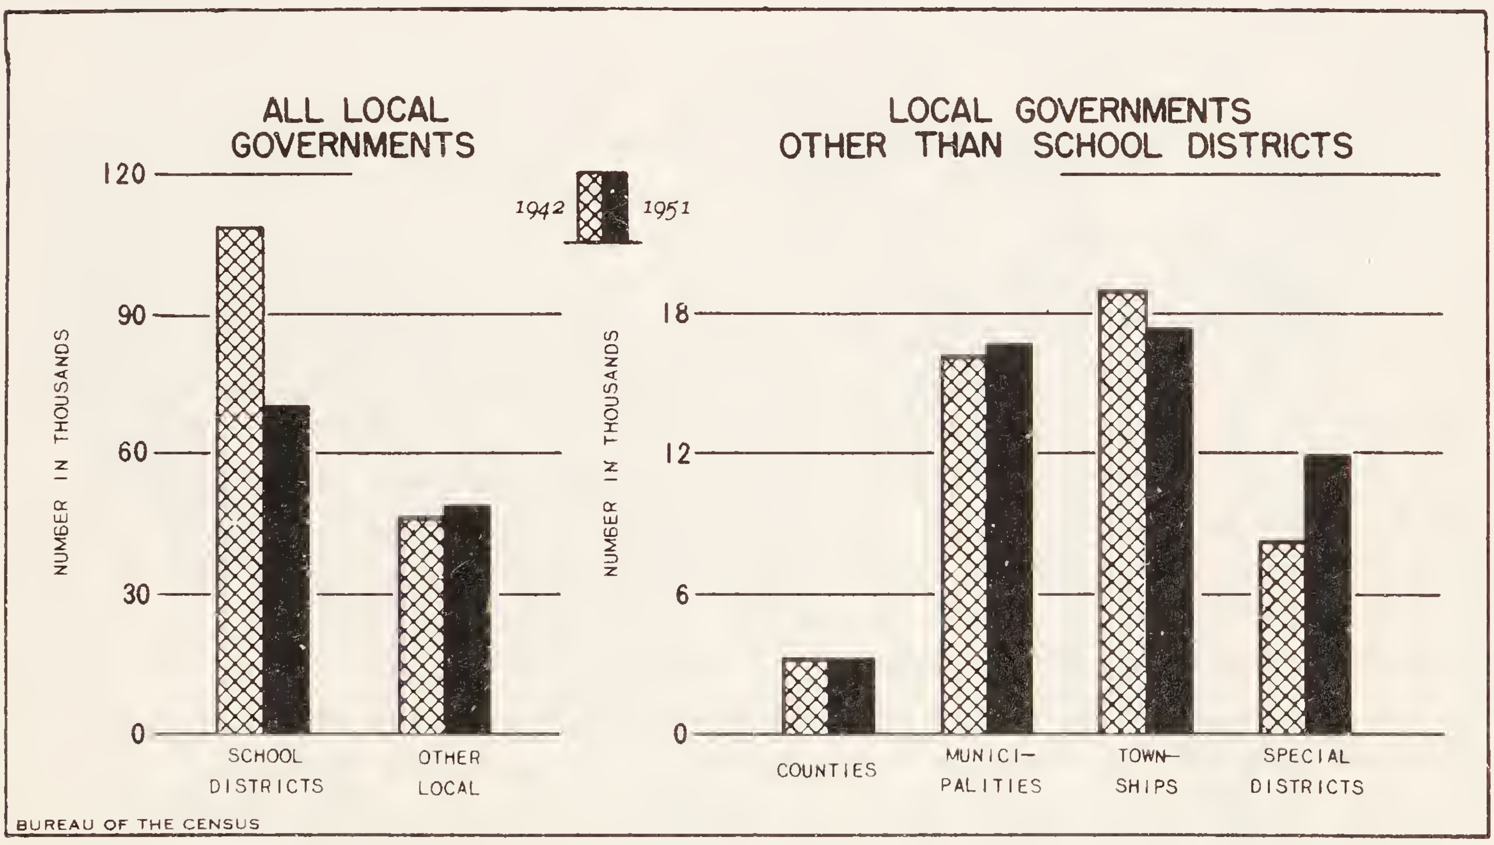
The majority of special districts are established to perform a single function but some provide a variety of services. Some special districts exist which have no taxing powers and are empowered only to provide electric power or other utility services for which they can collect charges from consumers. They are counted as local governments because of provisions as to their administration and public accountability. Other special districts without taxing powers may impose assessments for improvements, charge for special services, or incur indebtedness.

Likewise, soil conservation districts created by some states also lack taxing powers but are counted as local governments because they have substantial fiscal and administrative autonomy. Housing authorities in most states are classified as independent governments but in five states (Arizona, Kentucky, Michigan, New York and New Mexico) they are regarded instead as dependent agencies of other local governments and are not counted separately.

Almost one-half of all special districts are accounted for by three types —soil conservation, drainage, and fire protection districts. Soil conservation districts are found in 38 states; drainage districts in 27 states; and fire protection districts in 17 states (37 per cent of the total in New York state). Another one-fourth of the special districts consist of highway, housing, irrigation, water, and sewer districts. Highway districts are found in only six states with nearly all of them in Missouri; irrigation districts in 16 states; housing authorities in 36 states; and water and sewer districts in 29 states, chiefly in California, Illinois, Maine, Oregon, Massachusetts, and Washington.

Numerous functional classes make up the remaining 25 per cent of the special districts, including cemetery, health, hospital, library, mosquito abatement, port, power, weed eradication, and many other types of single-purpose or multi-purpose districts.

Included in the special districts are "authorities" being set up in many states to undertake the construction and operation of toll roads and bridges, port and airport facilities, public buildings, and other revenue-producing facilities. However, only those authorities which meet the specifications for governmental units are classed as independent governmental units and included with the count of special districts.



NUMBER OF LOCAL GOVERNMENTS IN THE U. S., BY TYPE: 1942 AND 1951

Urban Places and Population

By Howard G. Brunsman

Chief, Population and Housing Division, United States Bureau of the Census

ACCORDING to final figures from the Census of Population, the urban population represented nearly two-thirds of the total population of the United States in 1950. The urban population totaled 96,467,686 and the rural population was 54,229,675.

In terms of the proportion of urban population, the state with the highest proportion was New Jersey, which had 86.6 per cent of its population classified as urban. Other states with more than four out of five inhabitants living in urban territory were Massachusetts, Rhode Island, New York, and California. In all, 30 states had half or more of their population in urban territory. The most urban of the regions was the Northeast with almost four-fifths of its population living in urban territory. The South had less than half of its population in urban territory. In the West almost 70 per cent of the population was urban, and in the North Central region the proportion was 64.1 per cent, virtually the same as the national average of 64.0 per cent.

The 18 states with less than half of their population in urban territory were most heavily concentrated in the South, where 10, or the majority of the states in the region, were in this class. The state with the largest proportion of rural population was North Dakota, where 73.4 per cent of the population lived in rural territory. Three other states—South Dakota, Mississippi, and Arkansas—each had more than two-thirds of its population in rural territory (see map).

For the 1950 census, urban territory has been defined to comprise (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, and villages, (b) the densely-settled urban fringe, incorporated or unincorporated, around cities of 50,000 or more, (c) unincorporated places of 2,500 inhabitants or more outside of any urban fringe, and (d) towns of 2,500 inhabitants or more except in New England, New York, and Wisconsin where "towns" are simply minor civil divisions of counties. All other territory is classified as rural.

In 1950, as in earlier censuses, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. However, a definition of urban territory restricted to such places would class as rural territory, merely because they lacked legal municipal boundaries, a number of large and equally densely-settled places. For censuses prior to 1950 an effort was made to avoid some of the more obvious omissions, principally by classifying whole minor civil divisions of counties as urban on the basis of certain special rules.

Under these rules, however, many large and closely built-up places continued to be classified as rural. To avoid this situation in the 1950 census, the Bureau of the Census has defined arbitrary boundaries for urbanized areas and for unincorporated places of 1,000 or more outside urbanized areas. These boundaries follow recognizable physical features, such as roads and streams, but not necessarily the boundaries of political units. All of the population residing in urbanized areas and of those unincorporated places of 2,500 or more are classified as urban. Consequently, the special rules formerly used are no longer necessary.

An urbanized area consists of one or more cities of 50,000 or more, all nearby incorporated places of 2,500 or more, as well as nearby closely-settled smaller incorporated places and unincorporated territory. Each urbanized area thus contains one or more central cities plus additional territory, incorporated or unincorporated, called the urban fringe. Although the entire urbanized area is urban by virtue of this definition, it is clear that the central city or cities, as well as any incorporated place of 2,500 or more in the urban fringe, would also have been classified as urban if there had been no urbanized area, since each such place is incorporated and has 2,500 inhabitants or more. Although there are unincorporated places within the urban fringe, it was not feasible to establish boundaries for each such place and therefore they are not identified as separate places. In all, 157 urbanized areas have been established and defined by the Bureau of the Census, accounting for every city of 50,000 inhabitants or more in 1940, or in a subsequent special census conducted by the Bureau of the Census prior to 1950.

In general the distribution of the population by urban and rural residence according to the new urban definition is not comparable with corresponding distributions on the basis of the old definition used in the 1940 and earlier censuses. Both definitions include the 86,550,941 inhabitants of the

Urban Population as Per Cent of Total Population: 1950

3,883 incorporated places of 2,500 or more. They differ, however, in the definition of urban territory outside the corporate limits of these places.

The urban total under the new definition includes the remaining 7,922,018 inhabitants of the 157 urbanized areas (including the residents in incorporated places of less than 2,500 and in the unincorporated territory of these areas), as well as the 1,994,727 inhabitants of the 397 unincorporated places of 2,500 or more which are located outside the urbanized areas. The urban population under the old definition excluded these residents of the urban fringes and of the unincorporated places, but included the 2,376,523 inhabitants of the 140 places, principally minor civil divisions of counties, which were identified as urban under special rule.

It should be noted that 2,038,926 of the inhabitants of the places which were urban under special rule under the old definition are included in the urban population under the new definition, since 1,718,422 were located inside the urbanized areas and 320,504 were in unincorporated places of 2,500 or more. Thus, 337,597 of the urban population under the old definition become rural and 7,877,819 rural under the old definition become urban as a result of the change in definition. Thus, for the United States as a whole the urban population in 1950 was 96,467,686 according to the new definition, but only 88,927,460 according to the old definition.

Most of the states were not greatly affected by the change in definition. In nine states and the District of Columbia there was either no change or a net change amounting to less than 1 per cent of the total population. In 21 other states the net change amounted to from 1 to 4 per cent of the total population, and in 18 states to 5 per cent or more. The states most affected were Arizona with a net change amounting to 19.0 per cent of its total population, Delaware with a net change of 16.1 per cent, Maryland with 14.6 per cent, California with 13.6 per cent, and Connecticut with 13.5 per cent.

Massachusetts and Rhode Island were the only states in which the urban total under the new definition was less than under the old. This loss results from the fact that certain of the towns in these and in the other New England states represent the principal areas of the United States which were classified as urban under the old special rule. Some of these towns lie wholly or partly within the new urbanized areas and parts of some of the towns are within the unincorporated places of 2,500 or more, but in these two states the population of the parts of places that were urban under special rule that are no longer classified as urban more than offset the population of other areas which became urban by being located in urbanized areas or in unincorporated places of 2,500 or more.

A major portion of the population increase between 1940 and 1950 occurred in the urban territory. On the basis of the old definition, the urban population increased by 14,503,762, or 19.5 per cent, between 1940 and 1950, while the rural population increased by only 4,524,324, or 7.9 per cent; the increase in the total population was 14.5 per cent.

The state with the greatest rate of increase in urban population on the basis of the old urban definition was Nevada, the urban population of which increased by 94.2 per cent. Four other states—Arizona, New Mexico, Texas, and Wyoming—had increases in urban population of more than 50 per cent; 11 other states had increases of more than one-third; and 32 states had increases ranging up to one-third. No state lost urban population.

Losses of rural population, however, were numerous. In 17 states, more than one-third of the total, there were net losses of rural population. Most of these states were in the West South Central and West North Central divisions, where every state lost rural population. The rest were scattered through the South and the West.

The number of incorporated places of 25,000 or more inhabitants reached 481, plus three unincorporated urban places—East Bakersfield, California; Kannapolis, North Carolina; and Oak Ridge, Tennessee—for which the Bureau of the Census had defined boundaries (see Table 1). In 1940 there were 397 urban places of 25,000 or more and an additional 15 unincorporated areas designated as urban. Most of the places which came into the over 25,000 population group during the past 10 years are in the South and in the West. The population of incorporated places of 25,000 or more in 1950 represented an increase of 18.7 per cent over the persons living in places of this size in 1940. There were 106 cities of 100,000 or more in the United States in 1950, whereas there were only 92 cities of this size in 1940.

TABLE 1

NUMBER OF PLACES OF 2,500 OR MORE CLASSIFIED BY POPULATION GROUPS: 1940 AND 1950

Population Group	Incorporated Places				Unincorporated Places, 1950	
	Number		Per Cent Change 1940 to 1950	Cumulative Total, 1950	Number	Cumulative Total
	1950	1940*

Source: Department of Commerce, Bureau of the Census, U.S. Census of Population, 1950, Vol. I Summary.

*Figures for 1940 exclude the 141 places which were designated as urban under special rule.

Editors' Note: The "Incorporated Places" and "Unincorporated Places" in Table 1 above do not include 200 New England towns and Pennsylvania and New Jersey townships with populations of 5,000 or more shown in other sections of the Year Book as "cities." These towns and townships are not counted as urban places by the Bureau of the Census. See the section "Governmental Data for the 2,526 Cities Over 5,000 Population" for explanation of how the 200 towns and townships were selected for inclusion in the Year Book.

Metropolitan and Urbanized Areas*

By Victor Jones

Professor of Government, Wesleyan University

METROPOLITAN districts as defined and reported in the censuses of 1940, 1930, and 1920 were not reported in the census of 1950. Instead metropolitan population data are reported by two new areas: the standard metropolitan area and the urbanized area. The first in most instances is larger and the second smaller than the old metropolitan district. The principal advantage of the standard metropolitan area is that, except for New England where towns are the basic reporting units, data are reported by counties. This permits the compilation and presentation of a wider variety of statistical data on a uniform areal basis than has heretofore been possible.

A standard metropolitan area is defined by the Bureau of the Census in connection with each city of 50,000 or more in 1950. Each area therefore contains one, and may contain more than one, city of 50,000 or more. When two cities of 50,000 or more are within 20 miles of one another they have ordinarily been included in the same standard metropolitan area. Standard metropolitan areas may lie in more than one state. The Bureau's report states further:

"Each standard metropolitan area has as a nucleus the county or counties containing the central city or cities. Contiguous counties are included in a standard metropolitan area when they qualify on two types of criteria. One type is concerned with the character of the county as a place of work for nonagricultural workers and with the density of population. The other type is concerned with the extent to which contiguous counties are socially and economically integrated with the central city. Specifically, these criteria are:

"1. The county must have—(a) 10,000 nonagricultural workers, or (b) 10 per cent of the nonagricultural workers in the standard metropolitan area, or, (c) at least half of its population residing in contiguous minor civil divisions with a population density of 150 or more per square mile.

"2. Nonagricultural workers must constitute at least two-thirds of the total employed labor force of the county.

"3. There must be evidence of social and economic integration of the county with the central city as indicated by such criteria as the following:

a. 15 per cent or more of the workers residing in the contiguous county work in the county containing the largest city in the standard metropolitan area, or

b. 25 per cent or more of the persons working in the contiguous county reside in the county containing the largest city in the standard metropolitan area, or

---

*This article and Table II present final population data from the 1950 Census on standard metropolitan areas and urbanized areas. The data in the 1951 Municipal Year Book were based on preliminary counts.

c. An average of four or more telephone calls per subscriber per month from the contiguous county to the county containing the largest city in the standard metropolitan area."

In New England, where the city and town rather than the county were used to define standard metropolitan areas, the first and second criteria set forth above could not be applied. In their place, a population density criterion of 150 or more persons per square mile, or 100 or more persons per square mile where strong integration was evident, has been used.

The urbanized area represents the "nearby and closely settled" urban fringe in 1950 of all cities having a population of 50,000 or more in 1940 as mapped by geographers after field inspections of the areas. The following types of areas are included in a city's urban fringe if they are contiguous to the central city or if they are contiguous to an area already included in the urbanized area:

"1. Incorporated places with 2,500 inhabitants or more.

"2. Incorporated places with fewer than 2,500 inhabitants containing an area with a concentration of 100 dwelling units or more with a density in this concentration of 500 or more per square mile. This density represents approximately 2,000 persons per square mile and normally is the minimum found associated with a closely-spaced street pattern.

"3. Unincorporated territory with at least 500 dwelling units per square mile.

"4. Territory devoted to commercial, industrial, transportational, recreational, and other purposes functionally related to the central city.

"In addition, outlying noncontiguous areas, incorporated or unincorporated, meeting the residential density requirements are included in the urbanized area in the following cases. All outlying areas within one and one-half miles of the central contiguous urban area, measured along the shortest connecting highway, are included. Also, any outlying area within one-half mile of another outlying area, itself within one and one-half miles of the central contiguous urban area, is included."

The preliminary population data for standard metropolitan areas show a continuation of the trends of previous decades. Metropolitan counties (towns in New England) account for more than four-fifths of the nation's increase in population. Over half the population of the United States lives in metropolitan counties and towns. The rate of increase between 1940 and 1950 in standard metropolitan areas was 22.0 per cent (see Table 1). The increase in population of the remainder of the country was only 6.1 per cent. The long-noted tendency of central cities to increase, if at all, at a lower rate than suburban areas is again apparent.

The population of central cities increased by 13.9 per cent and that of outlying parts by 35.6 per cent. However, in 30 areas, 21 of which are in the South and Southwest, the central city increased at a more rapid rate than the suburbs. Texas and some Southern cities increased the population of the central city by extensive annexations and Baton Rouge by consolidation with East Baton Rouge parish. This is also reflected in the high proportion of the population of urbanized areas in Texas living in the central cities. In two Pennsylvania areas the central city decreased less rapidly in population than the suburbs.

The proportion of the population residing in the central city or cities in urbanized areas varies greatly between areas, ranging from a low of 28.3 per cent for the Wilkes-Barre area to a high of virtually 100 per cent for the Amarillo, Beaumont, and Lincoln areas. There are 79 urbanized areas with 80 per cent or more of their population in the central city or cities.

Thus population growth in the United States during the last 10 years was very largely growth within the standard metropolitan areas. On the whole, the communities on the outskirts of the large cities grew much more rapidly than did the central cities themselves or the remainder of the country. The outlying parts of standard metropolitan areas also surpassed their central cities as well as the remainder of the country in numerical growth of population with an increase of 9,203,125. It appears that nearly half of the population increase of the entire country took place in the outlying parts of the 168 standard metropolitan areas. In the standard metropolitan areas 54.5 per cent and in the urbanized areas 69.9 per cent of the people live in the central city or cities.

There are 168 standard metropolitan areas in continental United States and 157 urbanized areas (see Table II). Since the boundaries of urbanized areas had to be determined in advance of the census enumeration of 1950, these areas were established only for those cities with 50,000 inhabitants or more in 1940, or in a subsequent special census. On the other hand, all cities with 50,000 inhabitants or more in 1950 are included in the standard metropolitan areas. Thus, two cities that fell below 50,000 in 1950 have urbanized areas but not standard metropolitan areas, and 18 cities which exceeded 50,000 for the first time in 1950 have standard metropolitan areas but not urbanized areas. Since standard metropolitan areas are generally defined in terms of entire counties, they tend to be considerably larger in area and somewhat larger in population than the urbanized areas. With but few exceptions all portions of urbanized areas lie within standard metropolitan areas.

TABLE 1

POPULATION OF STANDARD METROPOLITAN AREAS 1950

Area	Population 1950	Population 1940	Population Increase, 1940 to 1950	
			Number	Per Cent
United States	150,697,361	131,669,275	19,028,086	14.5
Standard metropolitan areas	84,500,680	69,263,204	15,237,476	22.0
Central cities	49,412,792	43,358,605	6,054,187	14.0
Outlying parts	35,087,888	25,904,599	9,183,289	35.5
Outside standard metropolitan areas	66,196,681	62,406,071	3,790,610	6.1

Table II shows all of the 168 standard metropolitan areas, and 154 urbanized areas. Three urbanized areas, shown separately by the Bureau of the Census, have been combined in Table II with other areas for reasons given in footnotes at the end of the table.

TABLE II

POPULATION OF STANDARD METROPOLITAN AREAS AND URBANIZED AREAS: 1940 and 1950

Data in this table have been compiled from Advance Reports of Final Population Counts, Series PC-9, and Series P-A1 of the United States Bureau of the Census. The column "Rank" applies to the 1950 population.

Area and State	STANDARD METROPOLITAN AREAS							URBANIZED AREAS	
	Rank	Population 1950 (in thousands)	Population 1940 (in thousands)	Percent of Change: 1940-50			Percent of Population Inside Central City or Cities	Population 1950 (in thousands)	Percent of Population Inside Central City or Cities

[1] New York City, Newark and Jersey City.

[2] Albany - Troy and Schenectady are listed by the Bureau of the Census as separate urbanized areas. They are reported as one urbanized area in this table because the three cities are the central cities of one standard metropolitan area. The population of Albany - Troy urbanized area is 291,897 and 71 per cent of the population lives within the central cities. The population of Schenectady urbanized area is 123,273 and 74.5 per cent of the population lives within the central city.

[3] Allentown - Bethlehem urbanized area only.

[4] Tampa and St. Petersburg are listed by the Bureau of the Census as separate urbanized areas. They are reported as one urbanized area in this table because the two cities are the central cities of one standard metropolitan area. The population of the Tampa urbanized area is 179,335 and 69.5 per cent of the population lives within the central city. The population of the St. Petersburg urbanized area is 114,596 and 84.4 per cent of the population lives within the central city. [5] Utica urbanized area only.

[6] Wheeling urbanized area only. [7] Wilkes-Barre urbanized area only.

[8] Beaumont and Port Arthur are listed by the Bureau of the Census as separate urbanized areas. They are reported as one urbanized area in this table because they are the central cities of one standard metropolitan area. The population of the Beaumont urbanized area is 94,169 and 99.8 per cent of the population lives within the central city. The population of Port Arthur is 82,150 and 70 per cent of the population lives within the central city. [9] Greensboro urbanized area only.

[10] Hamilton urbanized area only.

Metropolitan and Fringe Area Developments in 1951

By John C. Bollens

Department of Political Science, University of California, Los Angeles

MANY cities of 50,000 or more people, finding themselves at the center of metropolitan areas containing numerous other local governments and sometimes crossing state or international borders, are trying out various approaches to reduce the resulting problems. The functional difficulties, growing out of more than one-half of the nation's population being centered in 168 metropolitan areas which are largely unified socially and economically and predominately disintegrated governmentally, are large in number and extensiveness. As population pressure has increased in these areas, especially during the last decade, there has been a growing realization that governmental unification must also increase. Some of the approaches that are being instituted are piecemeal, others seem experimental, and a few are comprehensive. But each effort, no matter what its nature, is a definite acknowledgment, sometimes quite belated, that a serious, significant problem of area adjustment exists in many of these important urban concentrations.[1]

The most comprehensive single change in 1951 became a reality when the Georgia legislature enacted laws to put "The Plan of Improvement" for Atlanta and Fulton County into operation. The plan, calling for the annexation to Atlanta of 82 square miles of fringe area containing about 100,000 people, the reallocation of functions between the city and the county, and the exclusion of the county from municipal functions, had been approved in June, 1950, by a combined, affirmative vote of Atlanta and the 14 county voting districts to be annexed. Some of the provisions took effect in 1951, but most became operative in 1952.

Territorially enlarged Atlanta now bisects Fulton County, leaving only scattered urban developments in the unincorporated area. A similar fringe condition existing on the periphery of Atlanta in DeKalb County where almost one-sixth of the city's territory is located remains unaffected. However, future expansion of Atlanta's boundaries in Fulton County may be accomplished by determination of the county superior court judge after a petition is filed by the city council or a majority of the owners of property in the area under consideration. There will be no required popular vote or state legislative action.

But more than a tripling of Atlanta's area has occurred. The county is prohibited from performing municipal functions which necessitated a transfer of many functions to Atlanta. Services placed under the city are fire protection, garbage collection, parks and recreation, police, sewerage, and water. For example, in terms of policing activities, the county law enforcement department was merged with the city police department, the county's crime laboratory, police records, and patrol cars became city property, and the county must contract with the city for police protection in the unincorporated areas. Thirty-nine county schools with 17,000 pupils came under the jurisdiction of the city school system.

---

[1] For a 10-year review of the most important attempts, see "Metropolitan Area Developments, 1940-50," Municipal Year Book, 1951, pp. 32-37.

All public health work in the city and the county became the province of Fulton County which also continues to have exclusive control over welfare activities throughout the county. City and county employees are being transferred from one government to the other without loss of pay or other rights. A joint performance committee, composed of city, county, and school representatives, was organized to oversee the functional alterations.

The improvement plan, a realistic compromise to the solution of immediate problems that does not eliminate more distant goals, has been appraised as working in four ways toward reducing the most pressing area problems. They are (1) bringing into Atlanta the neighboring areas having acute needs for municipal services, (2) encouraging fringe dwellers to accept annexation through effectuating the functional realignments, (3) easing future shifts in functions by consolidating governmental personnel, and (4) having a metropolitan planning commission devote all of its time to the problems of the metropolitan area.[2]

The territorial and functional reallocations that have just materialized in Atlanta and Fulton County constitute one of the most important metropolitan area developments in many years. Although Atlanta was the only incorporated center involved, the example offers significant proof that metropolitan plans, if carefully formulated and wisely presented within the framework of reasonable popular vote provisions, can be accomplished.

Partial consolidation of the city and the county of Philadelphia became complete unification in 1951 when the difficult multiple voting procedure that had blocked the proposal for about 30 years was overcome. The state legislature passed a proposed constitutional amendment permitting full city-county integration for the second consecutive session and the state voters in November sanctioned the proposition by an overwhelming ten-to-one vote. All county offices that were formerly political opportunities have been merged with city positions. The amendment is partly self-executing but certain further enabling laws must be passed by the state legislature to make the consolidation complete.

Acting under authority of an approved 1950 constitutional amendment, the 1951 session of the New Mexico legislature passed a statute to permit complete consolidation of Albuquerque and Bernalillo County. The city councilmen and county commissioners have been authorized to appoint a

The report of the Local Government Commission of Fulton County is entitled Plan of Improvement for Atlanta and Fulton County, Georgia (1950). See also Paul Van T. Hedden, "Atlanta Breaks Through Its Boundaries," American City, November, 1951, pp. 106-107.

charter committee. The charter draft must be approved by both groups and submitted to popular referendum. The South Dakota legislature enacted a law enabling the consolidation of contiguous municipalities. Although passed specifically for Sioux Falls and South Falls, the proposal has not yet been submitted to a local popular vote.

Tax-levying or bond-issuing special metropolitan districts or authorities, a device becoming more prevalent in recent years, continued to expand during last year. The Buffalo Port Authority, financed by cities, towns, and villages in the metropolitan area, began functioning. The Delaware Port Authority, with power to provide bridges, rapid transit, and port development and promotion in the Philadelphia-Camden region, was constituted through concurrence of the Pennsylvania legislature with earlier action taken by New Jersey. However, the necessary Congressional approval of the interstate arrangement was not forthcoming during the year.

A district operated by another district, Special Sewage District No. 1 of the East Bay (California) Municipal Utility District, formed in 1944, began partial operations during late 1951. It collects sewage from six cities located along the heavily populated eastshore strip of the San Francisco-Oakland metropolitan area. The Chicago Regional Port District, composed of four appointees of the governor and three of the mayor and possessing powers in port regulation, fees, and management of the Cook County part of the Calumet River, was established through state legislative enactment. A movement also got underway in adjacently situated St. Louis and St. Louis County to establish a metropolitan sewer district to consolidate the 111 separate systems now functioning.

The district or authority mechanism has tremendous potentialities for solving metropolitan problems that transcend many governmental units. It is used and organized in many ways, however. Sometimes when the governing board is made up predominately or wholly of appointees of the governor or the state legislature, the device cannot be considered a local effort. Furthermore, authorizing a district or authority to perform only one or a closely related set of similar services is simply a selective, piecemeal approach which merely helps in a limited way. At the same time such restricted endeavors further complicate the already overabundant number of governments in metropolitan areas.

Various types of cooperative efforts were also apparent during 1951. Again, this method is not generally comprehensive but is quite popular largely because its use does not disturb the basic organization of existing governmental units. It may consist of a joint agreement, such as inaugurated for King County (Seattle) and 17 cities in the field of civilian defense. It may concern contractual arrangements, such as Chattanooga putting into operation sewerage service to other cities. It may feature area-wide consideration of certain problems, such as the Milwaukee City Public Land Commission and the Milwaukee County Park Board reviewing recommendations made at monthly joint staff meetings. The possibilities are many, but the total effect in specific areas is often limited because of the restricted scope or advisory nature of the proposal.

Interest and action on metropolitan area problems are growing, but with

annexations made by the three Texas cities of Houston (79 square miles, 1949), Fort Worth (35 square miles, 1946) and Dallas (39 square miles, 1945). Only two cities annexed more than 10 square miles in 1951 as compared to four in 1950 and six in 1949. The 6.3 square miles that became part of Henderson, Texas, was the largest amount annexed by any of the smaller cities. At the other extreme, several cities absorbed less than one acre. The smallest was one-tenth of an acre placed within the corporate limits of Delray Beach, Florida.

Forty-five cities containing more than 10,000 inhabitants annexed one-half square mile or more in 1951, with 10 cities of 5,000 to 10,000 population acquiring one-half square mile or more (Table III). These 55 cities absorbing at least one-half square mile are located in 23 different states. Absent are the states of New England, the Middle Atlantic, and most of the Midwest. Representatives of the South and Southwest and parts of the Rocky Mountain region are especially evident. Almost one-half of these annexing cities are concentrated in the two states of California and Texas, both of which are experiencing heavy urban population gains.

TABLE 1

ANNEXATION TRENDS, 1945–51

Year	All Cities Over 5,000		Cities of 5,000 to 10,000		Cities Over 10,000	
	Total No. of Annexing Cities	No. of Cities Annexing ½ Sq. Mi. or Over	Total No. of Annexing Cities	No. of Cities Annexing ½ Sq. Mi. or Over	Total No. of Annexing Cities	No. of Cities Annexing ½ Sq. Mi. or Over
1951	309	55	98	10	211	45
1950	382	60	159	12	223	48
1949	301	56	113	11	188	45
1948	288	59	95	7	193	52
1947	298	68	128	15	170	53
1946	259	43	105	13	154	30
1945	152	25	63	3	89	22

Twenty-one municipalities, the same number as that for the two preceding years, substantially increased their areal size through 1951 annexations. The 1.56 square miles of Louisville, Mississippi, was augmented by an additional 1.94 square miles and its 124 per cent gain was the greatest of any city. Closely following was the 116 per cent increase of Lamar, Colorado. Both of these cities are in the 5,000-to-10,000 population class. But one larger urban center also experienced a large proportionate growth, for Garland, Texas, in the 10,000-to-25,000 groups, exactly doubled its size. The largest increase by a municipality of over 100,000 residents occurred in Austin, Texas, which grew to 51 square miles by adding slightly more than 13 square miles (up 35 per cent). None of these cities, however, accomplished the 1950 percentage growths of Pharr, Texas, and South Norfolk, Virginia, each of which exceeded 200 per cent.

Other cities of 5,000 or more people that increased their areas by not less than 25 per cent are: El Cajon, California (78%); Hopewell, Virginia

(77%); Henderson, Texas (76%); Temple, Texas (72%); Murfreesboro, Tennessee (71%); Midwest City, Oklahoma (64%); El Dorado, Arkansas (55%); Barstow, California (50%); Corbin, Kentucky (50%); Park Forest, Illinois (42%); Fairfield, Alabama (36%); North Little Rock, Arkansas (35%); Redding, California (31%); San Leandro, California (31%); Palo Alto, California (27%); Salinas, California (27%); Glendale, Arizona (26%); and Midland, Texas (26%).

The 309 cities reporting annexations in 1951 included 82 which annexed one-fourth square mile or more and detailed information was requested of these municipalities. Data supplied by 73 of these incorporated urban areas are summarized in many of the paragraphs which follow. Of the ten other cities, five answered before press time and are included in Table III and the names of four cities that did not reply are listed at the end of the same table. This leaves 227 incorporated places which absorbed less than one-fourth square mile of land in 1951.[4]

The average areas added to 73 cities in 1951 covered about one and three-fourth square miles of unincorporated land containing 1,780 residents. Following a trend which became perceptible in 1950, most annexations consisted of small areas that are not densely populated. This may be the outgrowth of more frequent realization that jurisdictional control of fringe territory should be obtained before improper developments occur, or it may be the result of increased difficulty in acquiring densely settled unincorporated communities. Usually the annexed area is residential in nature, although there are important exceptions where the present or contemplated use is industrial or commercial. All territory absorbed by these 73 cities in 1951 was unincorporated; none involved the merging of one existing city with another.

---

[4] The 227 cities with populations of 5,000 or more which annexed less than one-fourth square mile of land in 1951 are listed alphabetically by states within two population groups together with the number of acres annexed:

Cities over 10,000: Gadsden 130, Homewood 75, and Huntsville 100, Ala.; Alhambra 110, Anaheim 37, Brawley 2, Burlingame 10, Daly City 1, El Centro 36, Fullerton 38, Gardena 26, Glendale 115, Hawthorne 1, Lodi 30, Los Angeles 11, Madera 76, Oceanside 103, Orange 8, Oxnard 101, Pittsburg 156, Redondo Beach 14, San Bruno 77, San Buenaventura 33, San Luis Obispo 25, Santa Ana 20, Santa Barbara 40, Tulare 70, Visalia 50, Whittier 75, Calif.; Grand Junction 44, Colo.; Ocala 78 and Orlando 105, Fla.; Griffin 3 and Thomasville 12, Ga.; Boise 15, Moscow 10, and Nampa 106, Idaho; Belleville 10, Bloomington 135, Brookfield 97, Carbondale 50, DeKalb 15, Elgin 5, Macomb 10, Mattoon 8, Moline 84, Park Ridge 60, and Rockford 100, Ill.; Indianapolis 52, Huntington 1, LaPorte 70, Marion 104, and Wabash 10, Ind.; Burlington 80, Iowa; Arkansas City 50, Atchison 12, Emporia 98, Junction City 73, Lawrence 100, Manhattan 40, Ottawa 75, and Pittsburg 14, Kans.; Louisville 147 and Richmond 15, Ky.; Auburn 99, Me.; Takoma Park 12, Md.; Beverly 18 and Easthampton 6, Mass.; Albion 152, Ann Arbor 37, Benton Harbor 9, Kalamazoo 100, Mt. Clemons 4, Muskegon 40, and Muskegon Heights 58, Mich.; Albert Lea 59 and Rochester 30, Minn.; Moberly 8, Mo.; Billings 4, Mont.; Omaha 1, Neb.; Reno 17, Nev.; Carlsbad 19, Hobbs 25, and Roswell 23, N.M.; Utica 140, N.Y.; Elizabeth City 14, Gastonia 40, Greensboro 86, and Winston-Salem 43, N.C.; Minot 18, N.D.; Alliance 6, Cincinnati 22, Elyria 44, Hamilton 81, Lorain 120, Painesville 98, Parma 3, Piqua 26, and Toledo 45, Ohio; Ardmore 6, Bartlesville 3, Enid 66, Muskogee 63, Norman 25, and Shawnee 64, Okla.; Corvallis 38 and Medford 78, Ore.; Altoona 18, Bradford 15, Carnegie 20, Donora 34, Ellwood City 10, Lebanon 24, and Uniontown 7, Pa.; Columbia 55, S.C.; Sioux Falls 10, S.D.; Elizabethton 70, Johnson City 116, and Morristown 70, Tenn.; Denison 25, Denton 32, Harlingen 20, Lamesa 5, Lubbock 40, McAllen 50, Mercedes 60, Mission 60, Odessa 139, Palestine 142, Paris 60, Sherman 4, Texarkana 20, Tyler 100, Vernon 48, Waxahachie 106, Several cities acquired land in 1951 that included many people or possessed a high population density. The most persons (17,000) became residents of Austin when slightly more than 13 square miles were absorbed. Dallas, in growing more than 20 square miles, received approximately 12,100 new inhabitants. Albuquerque, which added 23,000 people through annexation in 1950, acquired another 10,500 through abosrbing 4.4 square miles in 1951. None of these examples, however, rivals the 45,000 population gain resulting from the annexation successes of Memphis in 1950.

But in terms of annexing area having a high population density, a 1951 example outdistances any of the preceding year. Midwest City, Oklahoma, obtained 8,000 individuals by taking about three-fourths of a square mile within its corporate jurisdiction. Menlo Park, California, also added a densely populated area, one-half square mile containing 4,200 fringe dwellers, but trails the 1950 leader, Hayward, California, which enlarged its limits by one-half square mile containing 5,500 inhabitants.

Eight basic services—drainage, fire protection, garbage collection, police protection, sewerage, streets, water supply and zoning—were all inadequate in areas annexed to 26 of 69 reporting cities, and these annexing cities, about one-third of the total, will have to spend considerable money to bring the facilities up to the norm maintained in the older sections. City officials are practically unanimous (60 of 65) in concluding that in the immediate future the area will cost more to service than it will return in taxation. However, five-sixths of them (50 of 59) concur that over a long period of time the area will pay its own way.

Many cities are caught in the web of not wishing to increase their financial obligations by expanding territorially but also not wanting to be plagued by substandard urban fringe developments at their borders. Feeling that the necessity for action is pressing, many municipalities are attempting to use annexation to eliminate or at least reduce the neighboring fringe. In most instances these cities have decided that finances should be partially subordinated to more serious areal difficulties.

Water supply was the public service most often adequate in the fringe at the time of annexation. This was also true in each of the three previous years. Drainage, fourth ranking in 1950, was next in sufficiency, followed

and Weslaco 155, Texas; Provo 40, Utah; Fredericksburg 135, Va.; Longview 1, Renton 25, Seattle 45, Walla Walla 3, and Wenatchee 60, Wash.; Clarksburg 20, W.Va.; Appleton 7, Kenosha 10, Manitowoc 47, Neenah 2, Two Rivers 40, and West Allis 63, Wis.

Cities of 5,000 to 10,000: Athens less than 1, Ala.; West Helena 30, Ark.; Yuma 17, Ariz.; Coalinga 20, Delano 5, Martinez 10, Mill Valley 2, Mountain View 33, Porterville 31, Roseville 50, and Selma 10, Calif.; Durango 26, Loveland 23, and Sterling 73, Colo.; Newington 6, Conn.; Crestview 40, Delray Beach less than 1, Quincy 20, and Winter Haven 14, Fla.; Thomaston 5, Ga.; Burley 1, Idaho; Arlington Heights 5, Dolton 40, East Alton 40, Fairfield 10, Metropolis 40, and Olney 3, Ill.; Alexandria less than 1, Angola 4, Lebanon 142, and Tell City less than 1, Ind.; Atlantic 12, Shenandoah 12, Webster City 7, Iowa; Iola 42, Kans.; Georgetown 10, Ky.; South Haven 75, Mich.; Crystal 25, Marshall 20, Minn.; Berkeley 75, and Rolla 35, Mo.; Alliance 3, and McCook 80, Neb.; Upper Penns Neck 60, N.J.; Fredonia 6 and Wellsville 2, N.Y.; Chapel Hill 66, Dunn 6, Laurinburg 68, Morganton 84, and Tarboro less than 1, N.C.; Wahpeton 15, N.D.; Brooklyn 86 and Wyoming 25, Ohio; Alva 10, Blackwell 10, Cushing 10, Edmond 5, Elk City 25, and Frederick 8, Okla.; Blairsville 64, Emaus 15, Lititz 2, and Oakmont 93, Pa.; Hartsville 21, S.C.; Marysville 110, Tenn.; Ennis 21, Kermit 32, Mexia 63, Seguin 1, Stephenville 15, and Yoakum 13, Texas; Price 2 and Springville 20, Utah; Centralia 2, Wash.; St. Albans 100, W.Va.

by streets, zoning, garbage collection, police protection (second in 1950 and fourth in 1949), and fire protection. Proper sewage disposal trailed a poor eighth, appearing less than one-half so often as fire protection. Sewerage was also the service least frequently adequate in 1950.

Four service needs stand prominent as reasons prompting the fringe area to annex (and/or the city wanting to annex). They are, in order of frequency, sewerage and fire protection (tied for first), water, and police protection. Quite often they are mentioned in combination. The importance of sewerage deficiencies in facilitating annexation is no surprise in view of this general lack in many fringe areas. Conversely, water supply is considered to be the most frequent adequate service and yet it is one of the needs fostering absorption. The reason seems to lie in one of two prevalent circumstances: either the water supply in the fringe area was fast decreasing or it could be expected to dwindle rapidly as population expanded. No other below-average condition served one-fourth so often as any of the four predominant ones. Infrequently, inadequacies in garbage collection, zoning, streets, schools, or drainage proved to be a major stimulus. Midwest City (Oklahoma), Park Forest (Illinois), and Waco were the only municipalities which found all urban services adequate in the annexed area. In some localities such service standards are required by a city before annexation will be considered.

Usually more than a single annexation was necessary to bring a relatively small amount of territory into the city. Approximately three-fifths of 71 reporting municipalities made two or more annexations in 1951. Together, they completed 321, an average of almost four and one-half for each urban center. Generally cities completing the largest number of absorptions obtained a relatively small amount of territory. In numerous cases, especially in several California localities, the procedure involved very small portions of land. San Leandro, California, which participated in the most successful annexation attempts (31) gained one and one-fifth square miles. Three other California cities similarly fought the battle of the lots. Fresno, which completed the most annexations in 1950 (35), succeeded in 22 more during 1951, but acquired only about two-fifths of a square mile. Eleven annexations were needed by Long Beach to bring three-fifths of a square mile within its control. And Sunnyvale needed seven to obtain one-half of a square mile. Such piecemeal annexation was not exclusive to incorporated places in California, however. Boulder, Idaho Falls, Madison (Wisconsin), and Midwest City (Oklahoma), each finished seven to 12 separate annexation proceedings to acquire a total of not more than four-fifths of a square mile.

It was highly extraordinary in 1951 for any city to absorb a sizable area through a single annexation. The outstanding exceptions are Austin, Texas, which embraced more than 13 square miles, and Henderson, Texas, over six square miles, in single actions, both considerably smaller than the largest single annexation of 1950 (Kansas City, Missouri, with over 19 square miles). In 1950 four cities annexed five square miles or more in single annexations. The smallness of most individual annexations should not be considered an accurate reflection of the desires of a majority of the city residents or frequently of the wishes of a majority of the people living in the combined city and fringe territory. Instead, it is frequently indicative of the stringency of the state annexation laws, sometimes necessitating a majority vote of the fringe area.

Most of the large annexations in recent years, including the biggest one of 1951, were completed under state laws which did not make the success of the effort dependent upon separate approval by the fringe dwellers. An ordinance by the city council, approval by the city residents, an overall voting of both the city and the fringe, a court order, or a state legislative action was all that was needed for many annexations of this large-scale type.

The frequent difficult nature of the annexation laws thus constitutes a serious stumbling block to the annexation interests of many cities. Some changes were made in the laws of several states during 1951. For example, state legislation in Oregon and Washington made annexation somewhat easier but a new statute in North Dakota increased the requirements. None of the statutory alterations will have much bearing upon the rate of annexation. An effort to restrict home rule cities in Texas from annexing by council ordinance was rejected. The strictness of many of the requirements, often unrealistic in economic and social terms, still remains an important matter requiring reconsideration and readjustment. Until changes are made, many cities will continue to be frustrated in their annexation endeavors.

In addition to not having the opportunity to operate under reasonable annexation laws, many cities injure their cause by lacking a plan or program of action. For example, almost nine-tenths of the areas annexed to 61 cities were the exclusive or joint originator of the annexation movement. Only eight cities individually initiated the process, a record scarcely one-half that of 1950. The fringe areas of 36 municipalities solely generated the idea while the annexed areas of another 17 cities started the movement jointly with the incorporated urban center. Legal requirements are only partly responsible. Too often the meager showing of cities demonstrates the absence of a comprehensive annexation program on the part of the municipality. Such a program places the initiative and leadership in the hands of the city rather than the fringe. It provides the means whereby the larger area is in better control.

Similarly, explaining the benefits of annexation to fringe residents, a vital element of any program, was undertaken by less than one-fourth of the cities (16 of 67). Almost twice the proportion of smaller cities of 5,000 to 10,000 population used this basic device while most larger cities—about five out of six—ignored it. Several that did take the time to inform the people discovered that their investment was very profitable, particularly in clearing up misunderstandings that existed in the fringe.

A few cities did prepare superior annexation publicity during 1951. An outstanding example is Phoenix which issued a mimeographed report of 12 pages titled "The Facts on City Expansion." After noting the relatively small land area of the city in comparison with others of comparable population and the top-heavy distribution of people outside of the corporate limits, the study proceeds to explain that annexation is not a revenue measure and that it will not double taxes. Instead, it is pointed out, expansion will result in the availability of new and improved services.

Pueblo circulated a form letter with personalized insertions regarding the relative costs to specific property owners of residing inside and outside of the municipality. Sunnyvale, California, prepared a one page mimeographed statement, "What Does the Balance Show?" demonstrating the financial and service benefits accruing to fringe inhabitants through becoming city residents. Similar compilations were released by Boulder and Stockton. Other cities, including Hopewell, Virginia, and Wichita, Kansas, made presentations via newspapers, public meetings, and radio.

There is a growing concern over the urban fringe-area problem as demonstrated by the increasing number of groups that are currently considering the matter. In California two legislative interim committees are studying city-county difficulties as the result of a proposal that was made in 1951. A measure, sponsored by the League of California Cities, called for the county board of supervisors to be prohibited from providing any municipal-type service to an unincorporated urban area after 1953 unless the costs of such services were paid by the area benefitted. To effectuate this plan, the county board would, after determining that the county was providing additional or more intensified services to certain areas, have had to create special urban services zones and charge the residents, including corporations, for the cost of this higher standard of service than was supplied to the rural sectors. Hearings on the bill were acrimonious. After passing the lower legislative house it was defeated in the state senate and the matter was referred for two-year study to the Senate Interim Committee on State and Local Taxation and the Assembly Committee on Municipal and County Government.

Similarly the Davidson County-Nashville Community Services Commission was created by act of the state legislature in 1951. This is a temporary agency that will cease to exist 60 days after adjournment of the 1953 legislative session. Consisting of 15 members, 11 of whom were named in the legislation, it will report by mid-1952 on recommended means of providing municipal services to suburban areas not now served.

An important report completed by an official study agency in 1951 marked a victory for the cities of Virginia. The Commission to Study Urban Growth, organized two years before as part of the compromise reached in the constant debate over the state's unique annexation law, recommended that the basis of the annexation procedure involving judicial determination by a three-man court remain unchanged. The commission urged that the law be made more flexible by placing a greater degree of discretion in the annexation judges. Certain procedural changes to facilitate less complex and costly litigation were also advocated. The group decided against recommending an annexation election either on an advisory or binding basis.

Under existing circumstances it is urgent that cities have comprehensive annexation programs and policies. But their real problem seems to lie in the prevalence of unsympathetic annexation state laws. It is time for a thorough reconsideration of these statutes. If annexation is to be a truly effective method of area adjustment, then the persuasiveness of the recent Virginia report regarding the inadvisability of a popular vote in such proceedings deserves analysis in terms of specific state situations.

TABLE III

ANNEXATION OF ONE-FOURTH SQUARE MILE OR MORE BY CITIES OVER 5,000: 1951

Data in this table were obtained directly from city officials in January and February, 1952. This table contains information only on annexations of one-fourth square mile or more completed by 82 cities in 1951. Replies from five of these cities, however, were received too late for inclusion in the summary in the latter part of the preceding article; these cities are indicated by a single dagger (†) after the name of the city. Four other cities which reported annexations of one-fourth square mile or more but did not furnish additional information are listed at the end of the table. Under "Origin of Annexation Movement," "C" indicates city government and "F" fringe area (including also real estate subdivision developers). Under "Adequate Facilities in Area When Annexed," "D" means draining, "F" fire protection, "G" garbage collection, "P" police protection, "S" sewer facilities, "St" streets, "W" water supply, and "Z" zoning; facilities not listed in columns were inadequate in the area annexed. These same abbreviations apply under "Service Needs Which Most Influenced Fringes to Annex" where they are supplemented by "Sc" for schools and "Stl" for street lighting.

Omitted from Table III are four cities which reported annexations of one-fourth square mile or more but whose officials had not furnished the additional information needed for the above table at the time of going to press. One of these cities has a population of more than 10,000: Urbana, Illinois, annexed 197 acres. The three remaining cities have populations between 5,000 and 10,000: Crystal City 416 and Brownfield 257, Texas; and Pineville, Louisiana, 400 acres.

Governmental Data for the 2,526 Cities Over 5,000 Population

THIS summary of governmental data for 2,526 American cities includes all cities and other incorporated urban places (boroughs, villages, and towns) over 5,000 population as shown in final figures of the 1950 census of population. In addition it includes 200 towns in the New England states and townships in Pennsylvania and New Jersey as "cities" even though the United States Bureau of the Census does not classify these political subdivisions as urban places. The 2,319 cities shown in the 1951 Year Book increased to 2,326 cities as a result of net changes between preliminary and final 1950 census figures. The addition of 200 towns and townships brings the total to 2,526 cities for the 1952 Year Book.[1]

Governmental data are shown for all 2,526 cities over 5,000 population in Table IV and were obtained directly from city officials and state correspondents for the Year Book. The governmental information shown in Table IV is summarized in this article and in Tables 1 to 11. Washington, D.C., although shown in Table IV, is omitted from this discussion because the city cannot be classified under any of the common forms of municipal government. Articles on the 1950 census of population, metropolitan areas, governmental units, and municipal annexations will be found elsewhere in the Year Book.

Selection of Towns and Townships. While the municipal corporation is by far the most common kind of American urban government, about one-half of the New England towns and Pennsylvania and New Jersey townships possess all or most of the social, economic, and governmental characteristics of regularly incorporated cities. Such towns and townships have a high population density and carry on the commonly recognized functions of municipal government even though they do not have the same status in law as incorporated cities.

The New England states, Pennsylvania, and New Jersey have a total of 401 towns and townships over 5,000 population. As stated above, about one-half of these towns and townships are similar to cities in most characteristics. On the other hand, many of the towns and townships have low population densities and perform only a few of the usual functions of municipal government. Two primary standards were established to separate the more urban of these towns and townships as "cities" for the 1952 Municipal Year Book. Each of the 200 towns and townships in the 1952 Year Book meets both of these standards:

---

[1] The 2,526 cities included in this Year Book and the population figures shown are taken from advance reports of the United States Bureau of the Census for the 48 states and the District of Columbia (Series PC-8, Nos. 1-49).

1. The town or township does not contain any incorporated urban place within its boundaries.

2. The town or township has one-half or more of its inhabitants living in unincorporated urban places or in an urbanized area.[2] The assumption is made that the town or township is likely to be rendering at least some municipal government services when one-half or more of its citizens live in closely built-up areas.

The application of the first standard above reduced the 401 towns and townships to 365; the application of the second standard reduced the number from 365 to the 200 included in this Year Book. These 200 towns and townships are divided among the various states as follows: 23 towns in Connecticut, one town in Vermont, 10 towns in Rhode Island, five towns in New Hampshire, 10 towns in Maine, 68 towns in Massachusetts, 39 townships in New Jersey, and 44 townships in Pennsylvania. Each of these towns and townships is designated with a "t" or "tp" in Table IV and other tables in the Year Book.

TABLE 1

FORM OF GOVERNMENT IN 2,525 CITIES OVER 5,000 POPULATION BY POPULATION GROUPS

Population Group	Total Number of Cities	Mayor-Council		Commission		Council-Manager		Town Meeting		Rep. Town Meeting	
		No.	Per Cent	No.	Per Cent	No.	Per Cent	No.	Per Cent	No.	Per Cent
Over 500,000	17	15	88.2	1	5.9	1	5.9	0	0.0	0	0.0
250,000 to 500,000 . .	23	7	30.4	7	30.4	9	39.2	0	0.0	0	0.0

10,000 to 25,000	837	396	47.3	148	17.7	250	29.9	24	2.9	19	2.3
5,000 to 10,000	1,180	775	65.6	138	11.7	231	19.6	35	3.0	1	0.1
All cities over 5,000 .	2,525	1,388	55.0	390	15.3	658	26.1	62	2.5	27	1.1

Form of Government. Table 1, which shows the form of government of all cities over 5,000, indicates that 55 per cent of these cities operate under the mayor-council plan. "Mayor-council" is defined to include municipal organizations having a president and board, or a burgess and council, or a chairman and committee, if they are equivalent in powers and functions to a mayor and council in mayor-council cities. Included are both

---

[2] Unincorporated urban places contain a definite nucleus of residences and include all surrounding closely settled areas within their boundaries. Over 2,000 such places have been delineated for the first time in the 1950 census. Urbanized areas contain a central city or cities of 50,000 inhabitants or more plus all densely settled areas generally contiguous to the central city, and other near-by areas that are functionally related to the central city through commerce, industry, or transportation. The Bureau of the Census established 157 of these urbanized areas for the 1950 census. For concise definitions of unincorporated urban places, urbanized areas, and other census areas of the 1950 census, see the Bureau of the Census release, Geographic Reports (Series GEO. No. 1) issued August 21, 1951.

"strong-mayor" cities, in which the mayor has important duties as chief administrator, and "weak-mayor" cities in which the council (often through committees) has more direct control of administration. The mayor-council form predominates in the very large cities (15 out of 17 cities over 500,000), and in the very small cities (66 per cent of the cities from 5,000 to 10,000 are mayor-council cities).

TABLE 2

METHOD OF SELECTION AND VOTING POWER OF MAYORS IN CITIES OVER 5,000 POPULATION BY FORM OF GOVERNMENT

Form of Government	Total Number of Cities	Number of Cities Reporting	Per Cent of Reporting Cities			Per Cent of Mayors Directly Elected by the People Voting	
			Directly Elected	Selected by Council	Highest No. Votes in Council Election	On All Issues	In Case of Tie
Mayor-Council	1,388	1,371	95.0	4.3	0.7	10.6	65.8
Commission	390	385	73.2	25.5	1.3	94.0	3.5
Council-Manager	658	636	41.7	57.2	1.1	42.4	53.0
Town Meeting	62	44	68.2	29.5	2.3	80.0	13.3
Rep. Town Meeting	27	23	60.9	39.1	0.0	100.0	0.0
All cities over 5,000	2,525	2,459	77.0	22.1	0.9	28.7	53.8

The commission plan, in which the elected commissioners serve collectively as a legislative body and individually as administrators of the several departments, is found in 15 per cent of all the cities.

The council-manager plan is found in 26 per cent of the cities over 5,000. There are more council-manager cities than commission cities in all population groups except the over-500,000 group where they are equal. The article "Council Manager Government," elsewhere in this Year Book, shows all cities adopting the council-manager plan during 1951 together with other changes in the directory of council-manager cities. Table XVII shows all council-manager cities as of March 1, 1952.

The town meeting and representative town meeting forms of government,

TABLE 3

VETO POWER OF MAYORS IN CITIES OVER 5,000

Form of Government	Total Number of Cities	Number of Cities Reporting	Per Cent of Reporting Cities			
			Veto All Measures	Veto Budget Only	Veto Selected Items	No Veto
Mayor-Council	1,388	1,181	42.7	1.0	19.3	37.0
Commission	390	352	7.7	0.0	1.1	91.2
Council-Manager	658	575	8.3	0.0	5.9	85.8
Town Meeting	62	21	0.0	0.0	0.0	100.0
Rep. Town Meeting	27	13	0.0	0.0	0.0	100.0
All cities over 5,000	2,525	2,142	27.0	0.6	12.4	60.0

applicable to New England towns, comprise 2.5 per cent and 1.1 per cent, respectively, of all cities over 5,000.

The Mayor. The power of the mayor varies with the manner in which he is selected—that is, whether he is directly elected by the people as mayor or chosen by the council from its membership; with his veto power; the length of his term of office; and his power to vote on council actions. An analysis of such information shows the difference in the position of the mayor under the main forms of local government and also make it possible to distinguish the strong mayor-council from the weak mayor-council cities. In most mayor-council and commission cities the mayor is chosen directly by the people as mayor; in 57 per cent of the council-manager cities the mayor is chosen by the council from its membership (see Table 2). The council member receiving the highest number of votes in election to the council automatically becomes mayor in a very small percentage of the cities.

TABLE 4

TERM OF OFFICE OF MAYOR IN CITIES OVER 5,000 POPULATION

Form of Government	Total Number of Cities	Number of Cities Reporting	Per Cent of Reporting Cities					
			One Year	Two Years	Three Years	Four Years	Five Years	Six Years
Mayor-Council	1,388	1,366	2.9	58.6	0.7	37.7	0.0	0.1
Commission	390	386	2.1	27.5	13.7	53.9	1.8	1.0
Council-Manager	658	606	21.0	53.4	2.0	23.3	0.3	0.0
Town Meeting	62	44	41.0	29.5	29.5	0.0	0.0	0.0
Rep. Town Meeting	27	23	39.1	17.4	43.5	0.0	0.0	0.0
All cities over 5,000	2,525	2,425	8.3	51.4	4.0	35.6	0.4	0.3

If the mayor is chosen by the council he is usually on a level with the other members as far as voting privileges are concerned. Where the mayor is directly elected by the people he has some voting privileges on council actions in 29 per cent of the cities reporting; the right to vote, however, is limited to cases of a tie in 54 per cent of all the cities. In mayor-council cities the directly elected mayor is a full voting member in only 11 per cent of the cases; in commission cities the directly elected mayor is a full voting member in 94 per cent of the cases.

In mayor-council cities over 5,000 population, 43 per cent of the mayors may veto any measure; 19 per cent may veto ordinances or other selected items; 1 per cent may only veto budget items; 37 per cent have no veto power. In all other forms the mayor usually does not have veto power (see Table 3).

Table 4 shows that two-year and four-year terms of office predominate for mayors in American cities. The two-year term is most frequent in mayor-council and council-manager cities while the four-year term of office occurs most frequently in the commission cities.

Number of Councilmen. Variations in the number of councilmen for the several forms of government and population groups are shown in Table 5.

The mode indicates the number of councilmen most frequently found in cities of the group, while the median indicates the middle item when the cities in the group are arrayed according to the number of councilmen. The range indicates the smallest and largest city councils in each group. Table 5 does not include town meeting and representative town meeting cities. Of 45 town meeting cities reporting, 36 have three-member councils; of 24 representative town meeting cities reporting, 18 have three-member councils.

Twelve cities still have bicameral councils: Danbury, Connecticut; Atlanta, Georgia; Augusta and Waterville, Maine; Everett, Malden, Northampton, and Springfield, Massachusetts; New York City; and Central Falls, Pawtucket, and Woonsocket, Rhode Island.

TABLE 5

NUMBER OF COUNCILMEN IN CITIES OVER 5,000 POPULATION BY POPULATION GROUPS AND FORMS OF GOVERNMENT

Population Group	Mayor-Council			Commission			Council-Manager		
	Range	Mode	Median	Range	Mode	Median	Range	Mode	Median
Over 500,000	8-50	9	16	...	8	...	...	9	...
250,000 to 500,000	7-27	9	9	3-7	5	5	7-9	9	9
100,000 to 250,000	4-33	9	11	3-5	5	5	4-13	9	7
50,000 to 100,000	5-40	5	13	3-5	5	5	2-14	7	7
25,000 to 50,000	2-32	7	9	2-7	5	5	4-17	5	7
10,000 to 25,000	4-24	7	7	3-7	5	5	3-20	5	5
5,000 to 10,000	3-18	6	6	2-6	3	3	2-15	5	5
All cities over 5,000	2-50	5	7	2-7	5	5	2-20	5	5

Table 5 indicates that in mayor-council cities the size of the council tends to decrease with the size of the city, probably because of a diminishing need for group representation in the small cities. Five is the usual number of commissioners in commission cities, except in cities of 5,000 to 10,000. Council-manager councils also show some decrease in size of council with a decrease in the size of the city. The number of councilmen reported for each city in Table IV includes the mayor only if he is a full voting member of the council.

Type and Method of Councilmanic Election. The character of councilmanic elections and the geographical basis of representation are shown for the five forms of government and seven population groups in Table 6. City council candidates run under a party label in 55 per cent of the mayor-council cities, but this is true in only 33 per cent of the commission cities, and in 15 per cent of the council-manager cities. Partisan elections also are found in a minority in town meeting and representative town meeting cities. A similar distinction is found in the basis of representation: only 39 per cent of the mayor-council cities elect all councilmen at large, while all or almost all of the city councilmen are elected at large in commission-governed cities and in the town meeting and representative town meeting cities. Councilmen are elected at large in 74 per cent of the council-manager cities. A sizeable minority of the mayor-council and council-manager cities have combined representation at large and by wards.

In 44 cities over 5,000 population, some or all of the city councilmen are nominated by wards but elected at large. Nine of the cities with this method of election are over 50,000 population: Alhambra, Long Beach, Oakland, Richmond, and Stockton, California; Tampa, Florida; Portland, Maine; Jackson, Michigan; and Charleston, South Carolina.[3]

TABLE 6

TYPE AND METHOD OF COUNCILMANIC ELECTIONS IN CITIES OVER 5,000 POPULATION BY FORMS OF GOVERNMENT AND POPULATION GROUPS

	Total Number of Cities	Type of Election			Method of Election				Over-lapping Terms (Per Cent of Total Cities)
		Number of Cities Reporting	Per Cent of Reporting Cities		Number of Cities Reporting	Per Cent of Reporting Cities

All cities over 5,000	2,525	2,434	40.6	59.4	2,417	58.7	25.1	16.2	57.7

Overlapping terms for councilmen are most common in council-manager cities and least common in town meeting and commission cities. The percentage of cities having overlapping terms ranges from 26 per cent in the 250,000-to-500,000 population group to 63 per cent in cities of 5,000 to 10,000.

---

[3] The 35 cities between 5,000 and 50,000 population that use this method of election are: 25,000 to 50,000—Tucson, Arizona; West Palm Beach, Florida; Elkhart and Marion, Indiana; and Muskogee, Oklahoma. 10,000 to 25,000—Selma, Alabama; Bradenton, Florida; Crawfordsville, Elwood, and Goshen, Indiana; Takoma Park, Maryland; Holland, Monroe, and Muskegon Heights, Michigan; Clovis, New Mexico; Garden City, New York; Shawnee, Oklahoma; and Baytown, Texas. 5,000 to 10,000—Harrison, Arkansas; Cartersville, Georgia; Burley, Idaho; La Grange Park and Mount Carmel, Illinois; Seymour and Sullivan, Indiana; Clarinda, Iowa; Dayton, Kentucky; Marshall and Three Rivers, Michigan; Marshall, Minnesota; Artesia and Raton, New Mexico; Chester, South Carolina; Shelbyville, Tennessee; and Stephenville, Texas.

Terms of Councilmen. Terms of office for city councils, classified by forms of government and by population groups, are shown in Table 7. If there are varying terms, the term shown is that of the largest number of councilmen. There are usually two- or four-year terms: mayor-council cities more often have two-year terms while commission and council-manager cities more often have four-year terms. Three-year terms predominate in town meeting and representative town meeting cities. In 83 cities some councilmen are elected for longer terms than others (see individual city footnotes to Table IV).

Ten cities reported changes in the term of office for city councilmen in 1951, not including cities where there was a change in form of government. Six of the 10 cities increased the term from two to four years—Hollywood, Florida; West Des Moines, Iowa; Plymouth, Michigan; Gloversville, New York; Wilmington, North Carolina; and Lyndhurst, Ohio. Four cities reduced the term of council—from four to two years in Park Forest, Illinois, and Topeka, Kansas; from five to three years in Tallahassee, Florida; and from four to three years in Mexico, Missouri.

TABLE 7

TERMS OF OFFICE FOR CITY COUNCILS IN CITIES OVER 5,000 POPULATION BY FORMS OF GOVERNMENT AND POPULATION GROUPS

	Total Number of Cities	Terms of Office of Council						
		Number of Cities Reporting	Per Cent of Reporting Cities

10,000 to 25,000	837	813	1.7	42.0	11.4	43.9	0.4	0.6
5,000 to 10,000	1,180	1,143	0.5	42.5	12.2	43.3	0.4	1.1
All cities over 5,000	2,525	2,456	0.9	42.5	10.3	45.0	0.4	0.9

Salaries of Councilmen. Detailed data on the salaries of councilmen under different forms of government and in different population groups are contained in Table 8. If the salaries are not the same for all councilmen in a city, the salary shown is that of the majority of councilmen. The tendency is apparent in commission cities to pay higher salaries to councilmen in view of their administrative duties, while considerably lower salaries are the general rule for mayor-council and council-manager cities below 100,000 and for town meeting and representative town meeting cities (see Table 8).

TABLE 8

SALARIES OF CITY COUNCILMEN IN CITIES OVER 5,000 POPULATION BY POPULATION GROUPS AND FORMS OF GOVERNMENT

Population Group	Number of Cities Reporting	Lowest	Lower Quartile	Median	Upper Quartile	Highest

Rep. Town Meeting	16	300	300	520	800	2,500
Total	1,878	5	129	286	600	10,000

A total of 418 cities over 5,000 indicated that city councilmen are unpaid or, in a few of these cities, are paid the nominal amount of $1 per year (see Table 9). It can be readily observed that unpaid councilmen are mostly in the smaller mayor-council and council-manager cities.

A total of 33 cities reported increases in the salaries of councilmen in 1951, not including cities which made salary changes as a result of a change in form of government.

TABLE 9

NUMBER OF CITIES OVER 5,000 POPULATION WHERE CITY COUNCILMEN SERVE WITHOUT SALARY BY POPULATION GROUPS AND FORMS OF GOVERNMENT

Population Group	Mayor-Council Cities	Commission Cities	Council-Manager Cities	Town Meeting Cities	Rep. Town Meeting Cities	Total
Cities over 500,000	0	0	0	. .	. .	0

10,000 to 25,000	65	1	68	1	1	136
5,000 to 10,000	157	5	76	0	0	238
All cities over 5,000	242	6	167	1	2	418

Elective Offices. The number of cities which have elected offices other than those of the mayor and council is shown in Table 10. Offices held by councilmen or elected commissioners are excluded. On the other hand, many of the elected officers perform the duties of other positions in addition to those indicated by their titles, but only the offices corresponding to

TABLE 10

MUNICIPAL ELECTIVE OFFICES OTHER THAN MAYOR AND COUNCIL IN CITIES OVER 5,000 POPULATION

Title of Office	All Cities Over 5,000		Over 500,000	250,000 to 500,000	100,000 to 250,000	50,000 to 100,000	25,000 to 50,000	10,000 to 25,000	5,000 to 10,000
	No.	Per Cent Of Cities Reporting

None of the Above Elective .	1,109	45.5	3	12	34	79	140	378	463
Cities Not Reporting	87	. . .	0	0	1	0	3	17	66

their titles are shown. For example, the auditor in many Ohio, North Dakota, and South Dakota cities also has the duties of a city clerk. In many Indiana cities the city clerk also has the duties of city treasurer. In addition, municipal functions performed by elected county officers (assessors are a common example) are not shown in these tables.

Of greatest significance in Table 10 is the fact that 1,109 cities over 5,000 (46 per cent of the 2,438 reporting cities) have no elected officers other than city councilmen. City treasurers and clerks are most often popularly elected—in 36 per cent and 27 per cent, respectively, of the cities over 5,000. Tradition is in large part responsible for this situation, since these are among the earliest important offices established in municipal corporations. Somewhat less numerous are the cities reporting popular election of assessors, auditors, and attorneys. State laws are another factor that should be considered in interpreting Table 10 which summarizes information for cities over 5,000. General laws usually specify that offices be filled by election rather than appointment.

TABLE 11

OWNERSHIP AND OPERATION OF UTILITIES IN CITIES OVER 5,000 POPULATION

	Type of Utility	All Cities Over 5,000		Over 500,000	250,000 to 500,000	100,000 to 250,000	50,000 to 100,000	25,000 to 50,000	10,000 to 25,000	5,000 to 10,000

Municipally Owned Utilities. Nearly all (2,439) of the cities over 5,000 reported on the ownership of utilities, as shown in Table 11. Seventy-four per cent reported ownership of water supply and distribution systems or water distribution systems, and 49 per cent reported sewage treatment plants. Twenty-one per cent of the reporting cities own electric generation and distribution systems or electric distribution systems. Twenty-one per cent of the reporting cities over 5,000 own and operate airports although 303 additional cities over 5,000 lease their airports to private operators or other governmental agencies.

Some cities listed in Table IV are served by a public utility that is owned by another governmental unit; but only utilities which the city itself owns or owns jointly with some other governmental unit are shown. Included, however, are utilities owned by a municipal agency or board separate from the general city government but entirely within the corporate limits of the city. Where the city owns but does not operate the utility, this fact is indicated. Utilities reported as under construction are included, except in the case of airports.

Table IV does not indicate, by footnotes or symbols, the utilities jointly owned or owned and operated by individual cities with other cities, counties, special districts, or other governmental units. A total of 108 cities in 29 states, for example, jointly own or own and operate airports with the county, neighboring cities, a state university, or other agency. This does not include the municipal airports owned by cities but leased to private operators or other governmental agencies. A list of the 108 cities jointly owning and operating airports with other governmental units is shown in the 1951 Year Book, footnote 4, pages 46 and 47.

No less than 21 New Jersey cities shown in Table IV participate in intercity arrangements for sewage treatment. All 21 cities are in or adjacent to the New York City-Northern New Jersey metropolitan area. Twenty-three other cities have inter-city arrangements for collection and disposal of sewage—eight in Ohio, six in California, and nine in Massachusetts, New York, Tennessee, and Virginia. The cities with inter-city arrangements for sewerage systems or sewage disposal are shown (except for Woodbridge, New Jersey, and Danvers, Massachusetts) in the 1951 Year Book, footnote 5, page 47.

Seven cities in northern New Jersey again take the lead in intercity agreements for water supply and distribution: Clifton, Glen Ridge, Kearny, Montclair, Newark, Passaic, and Paterson. Other cities shown in Table IV that jointly own and operate water supply systems are Beverly and Salem, Massachusetts; Mamaroneck, New York; Uhrichsville, Ohio; Lansdale, Pennsylvania; and Coos Bay and North Bend, Oregon. The community auditorium is city-county owned in Roseville, California; Spartanburg, South Carolina; and Midland, Texas. In Houston, Texas, port facilities are jointly owned with the county, and in Virginia Beach, Virginia, the incinerator is jointly owned with the county. The bus system is jointly owned by Greenfield and Montague, Massachusetts.

TABLE IV

GOVERNMENTAL DATA FOR ALL CITIES OVER 5,000 POPULATION: 1952

This table includes all cities and other incorporated places in the United States over 5,000 population as shown by the 1950 federal census. This table also includes 200 New England towns and Pennsylvania and New Jersey townships selected by special rules (see preceding article for full explanation). The 1950 population figures are final and are from the United States Bureau of the Census advance reports for individual states and the District of Columbia (Series PC-8, Nos. 1 to 49).

Under "Form of Government", "MC" indicates mayor-council, "Mgr" council-manager, "Com" commission, "TM" town meeting, and "RTM" representative town meeting.

"Mayor" refers to the chief elected official and includes burgess, chairman, or president: "C" indicates he is selected as mayor by the governing body; "D" that he is directly elected by the people; and "H" that councilman receiving most votes in election becomes mayor. Under "Voting and Veto Power", code letters to the left indicate voting power as follows: "A" votes on all issues, "T" votes only in case of tie, and "N" no voting power; code letters to the right indicate veto power as follows: "A" all issues, "B" budget only, "S" ordinances only, and "N" no veto power.

"Number of Councilmen" includes the mayor if he may vote on all issues; mayor is excluded from number of councilmen if he may vote only in case of a tie or if he may never vote. The first figure shows total councilmen and the second shows how many of total are elected at large; a zero (0) in the "at large" column shows that all councilmen are elected from wards. Under "Type of Election", "NP" indicates nonpartisan (no party designation on ballot) and "P" partisan. A double dagger (‡) indicates terms of councilmen are overlapping.

See code letters below for "Other Elective City Offices" and "Utilities Owned and Operated"; a section mark (§) indicates utility owned but not operated. A superior numeral (^{1}) or an asterisk (*) refers to notes at end of table. Leaders (. . .) indicate data not reported. Further explanation in preceding article.

City Offices Held by Officials Elected by People (excluding councilmen)

A—Assessor
C—Controller
D—Auditor
E—Engineer
F—Director of Finance
K—Clerk or Recorder
L—Attorney
P—Police Chief

Notes on Governmental Data, Table IV

[1] Most Ohio cities operating the mayor-council form of government have two chief elected officials—a mayor and the president of the council. The president of the council votes in case of a tie, and the mayor never votes. Neither of these officials is included in the number of councilmen shown for these cities.

[2] In Minnesota villages the governing body consists of the mayor, three trustees, and the village clerk; all five have full voting powers. The mayor and the clerk are elected for two-year terms, the three trustees for overlapping three-year terms.

INDIVIDUAL CITY FOOTNOTES

(Cities listed alphabetically without regard to population)

ANACORTES, WASHINGTON: Councilman at large is elected for a two-year term.

ALMA, MICHIGAN: Every two years two councilmen are elected for four-year terms and one for a two-year term.

AMERICAN FORK, UTAH: Three councilmen are elected for four-year terms and two councilmen for two-year terms.

ARKANSAS CITY, KANSAS: Two councilmen have four-year terms, one a two-year term.

ARTESIA, NEW MEXICO: Four councilmen are elected for four-year terms and four councilmen for two-year terms.

ATLANTA, GEORGIA: The city has a bicameral legislature consisting of 18 councilmen and nine aldermen.

AUBURN, WASHINGTON: Six councilmen are elected for four-year terms and one councilman for a two-year term.

AUGUSTA, GEORGIA: A councilman's salary is $300 the first year and $600 the second and third years.

AUGUSTA, MAINE: The city has a bicameral council consisting of eight aldermen and 16 councilmen.

BATON ROUGE, LOUISIANA: The mayor is chief executive officer for the city and for the parish (county) of East Baton Rouge. The seven city councilmen together with two councilmen elected by voters both inside and outside the city comprise the governing body for the parish.

BAY, OHIO: The president of the council is elected for a two-year term.

BELLAIRE, TEXAS: The mayor and two councilmen have two-year terms; three councilmen have one-year terms.

BELMONT, CALIFORNIA: Three councilmen are elected for four-year terms and two for two-year terms.

BEND, OREGON: Five councilmen have two-year terms; two councilmen have four-year terms.

BIG RAPIDS, MICHIGAN: The mayor is elected for a two-year term and the other two councilmen for four-year terms.

BIRMINGHAM, ALABAMA: Water works owned and operated by the city is for industrial purposes only.

BRATTLEBORO, VERMONT: Three selectmen are elected for three-year terms, and two for one-year terms.

BRISTOL, PENNSYLVANIA: Twelve councilmen have four-year terms; six have two-year terms.

BUCHANAN, MICHIGAN: Three councilmen are elected annually; the two elected by the largest vote have two-year terms, and the third has a one-year term.

BUFFALO, NEW YORK: The nine councilmen elected by wards serve two-year terms and the six councilmen elected at large serve four-year terms.

CEDAR CITY, UTAH: Four councilmen have two-year terms, and one has a four-year term.

CENTRAL FALLS, RHODE ISLAND: The city has a bicameral legislature consisting of 11 councilmen who receive $150 a year and 5 aldermen who receive $250 a year.

CHEBOYGAN, MICHIGAN: Four councilmen are elected for two-year terms and three councilmen for four-year terms.

CLARKSTON, WASHINGTON: Four councilmen are elected for four-year terms and three councilmen for two-year terms.

CLINTON, OKLAHOMA: Two councilmen are elected for two-year terms and two councilmen for one-year terms.

COHOES, NEW YORK: The board of assessors consists of one appointed and two elected assessors.

CONCORD, NEW HAMPSHIRE: Six councilmen are elected at large for two-year terms and nine councilmen are elected by wards for four-year terms.

CORAL GABLES, FLORIDA: Four councilmen have four-year terms; one has a two-year term.

CROOKSTON, MINNESOTA: The mayor has power to veto council resolutions. The councilman at-large is elected for a two-year term.

DANBURY, CONNECTICUT: The city has a bicameral legislature consisting of eight councilmen and four aldermen.

DES MOINES, IOWA: Three councilmen have four-year terms, and two have two-year terms.

EMPORIA, KANSAS: Two councilmen are elected for two-year terms and one councilman for a four-year term.

EVERETT, MASSACHUSETTS: The city has a bicameral legislature consisting of 18 councilmen who receive $400; and seven aldermen elected at large who receive $600.

FAIRBORN, OHIO: Three councilmen are elected for four-year terms and two councilmen for two-year terms.

FORT MYERS, FLORIDA: Three councilmen serve four years and two councilmen serve two years.

FRESNO, CALIFORNIA: The mayor who is a full voting commissioner receives $8,500, the two administrative commissioners receive $7,500, and the two legislative commissioners (part-time) receive $2,400.

GARDEN CITY, KANSAS: One councilman each serves two-, three-, and four-year terms.

GRAFTON, WEST VIRGINIA: Three councilmen are elected for four-year terms and two councilmen for two-year terms.

HAWTHORNE, CALIFORNIA: Three councilmen have a two-year term, two a four-year term. Mayor could have two-year term if elected for short term on council.

HOBBS, NEW MEXICO: Three councilmen are elected for four-year terms and two for two-year terms.

IOWA CITY, IOWA: Three councilmen have four-year terms, and two have two-year terms.

JUNCTION CITY, KANSAS: Two councilmen have four-year terms, and one has a two-year term.

KEARNEY, NEBRASKA: Three councilmen are elected for four-year terms, and two councilmen have two-year terms.

KEENE, NEW HAMPSHIRE: Five councilmen are elected for four-year terms and 10 councilmen for two-year terms.

KELSO, WASHINGTON: The councilman at-large is elected for a two-year term.

KEY WEST, FLORIDA: Three councilmen are elected every two years; the two elected with the highest number of votes serve four-year terms and the third serves a two-year term.

KINLOCH, MISSOURI: Five councilmen are elected for two-year terms and five councilmen for one-year terms.

LA GRANDE, OREGON: Two councilmen are elected for two-year terms and one councilman for four-year term.

LAS CRUCES, NEW MEXICO: Three councilmen have four-year terms; two have two-year terms.

LIVONIA, MICHIGAN: Six councilmen have four-year terms, and one has a two-year term.

LONGVIEW, WASHINGTON: The one councilman at-large serves a two-year term, the other six councilmen four-year terms.

LUDINGTON, MICHIGAN: Five councilmen are elected for two-year terms and three councilmen for four-year terms.

McCOOK, NEBRASKA: Three councilmen are elected for four-year terms and two councilmen for two-year terms.

MANHATTAN, KANSAS: Three councilmen have two-year terms, and two have four-year terms.

MELVINDALE, MICHIGAN: The mayor cannot vote on appropriation ordinances, although he does have full veto power.

MIAMI, FLORIDA: Three councilmen are elected every two years; the two receiving the greatest number of votes serve four-year terms while the third serves a two-year term.

MIAMI BEACH, FLORIDA: Four councilmen are elected every two years; three for a four-year term and one for a two-year term.

MIAMI SHORES, FLORIDA: Three councilmen are elected for four-year terms and two councilmen for two-year terms.

MOUNT AIRY, NORTH CAROLINA: Three councilmen are elected for four-year terms and two councilmen for two-year terms.

MOUNT VERNON, WASHINGTON: The councilman at-large serves a two-year term.

NASHUA, NEW HAMPSHIRE: The nine ward aldermen have two-year terms; the six elected at-large have four-year terms. The ward aldermen receive $ 100 per year and the aldermen elected at-large receive $200 per year.

NEVADA, MISSOURI: Three councilmen are elected for two-year terms and two councilmen for three-year terms.

NEW YORK, NEW YORK: In addition to the council there is the Board of Estimate, consisting of the mayor, the elected comptroller, the president of the council, and the five borough presidents (each having weighted voting power) which has responsibility for certain financial legislation.

NORTHAMPTON, MASSACHUSETTS: The city has a bicameral council of 21 councilmen and seven aldermen.

NORWALK, CONNECTICUT: The Second Taxing District generates and distributes electricity; the First and Second Taxing Districts own and operate a water supply and distribution system.

OAK PARK, MICHIGAN: The mayor and two councilmen are elected for two-year terms, and the other two councilmen are elected for four-year terms.

ONEIDA, NEW YORK: The board of city assessors consists of two elected and one appointed assessor.

OPALOCKA, FLORIDA: Three councilmen are elected every two years; the two with the highest number of votes receive four-year terms and the other a two-year term.

OWATONNA, MINNESOTA: Five councilmen have two-year terms; the two councilmen-at-large have four-year terms.

PACIFIC GROVE, CALIFORNIA: Five councilmen are elected for four-year terms and one councilman for a two-year term.

PASCO, WASHINGTON: Six councilmen have four-year terms, and one councilman has a two-year term.

PAWTUCKET, RHODE ISLAND: The city has a bicameral legislature consisting of 18 councilmen who receive $200 and six aldermen who receive $300.

PEEKSKILL, NEW YORK: Three councilmen are elected for four-year terms and three councilmen for two-year terms.

PITTSBURG, KANSAS: Two councilmen serve four-year terms; three councilmen serve two-year terms.

PLEASANTVILLE, NEW JERSEY: The councilman-at-large has a two-year term.

PLYMOUTH, MICHIGAN: Six councilmen have four-year terms, and one has a two-year term.

PORT TOWNSEND, WASHINGTON: Six councilmen are elected for four-year terms and one councilman for a two-year term.

PULLMAN, WASHINGTON: Six councilmen have four-year terms; the councilman-at-large has a two-year term.

PUYALLUP, WASHINGTON: Four councilmen are elected for four-year terms and three for two-year terms.

ROCHESTER, NEW YORK: The council selects one of its own members or any citizen as mayor for a two-year term. If the mayor selected is not a councilman he has no voting right.

ROCKVILLE, CONNECTICUT: Eight aldermen have four-year terms; four have two-year terms.

RUTLAND, VERMONT: The mayor can veto all actions of council except those involving the acquisition of land for public purposes or suspension or removal of city officers; he can vote only on actions involving acquisition of land for public purposes or suspension or removal of city officers.

SALINA, KANSAS: Three councilmen have two-year terms; two have four-year terms.

SAN ANSELMO, CALIFORNIA: Three councilmen are elected for four-year terms and two for two-year terms.

SELMA, ALABAMA: The city has both a mayor and president of the council. The president of the council votes only in case of a tie, and the mayor never votes. Neither official is shown in the number of councilmen.

SHAWNEE, OKLAHOMA: Six councilmen are elected for four-year terms and one for a two-year term.

SOUTH NORFOLK, VIRGINIA: Three councilmen have two-year terms; two have four-year terms.

SPRINGFIELD, MASSACHUSETTS: The city has a bicameral legislature consisting of 18 councilmen elected by wards and eight aldermen elected at-large.

SPRINGVILLE, UTAH: Three councilmen serve two-year terms and two councilmen serve four-year terms.

STURGIS, MICHIGAN: Eight councilmen are elected from wards for two-year terms, and the councilman-at-large is elected for a one-year term.

SYRACUSE, NEW YORK: The five ward councilmen have two-year terms, and the four elected at-large have four-year terms.

THE DALLES, OREGON: The councilman-at-large is elected for a two-year term.

VAN BUREN, MAINE: Three councilmen are elected for two-year terms and two for one-year terms.

VENTNOR, NEW JERSEY: The councilman at-large serves a two-year term.

WASHINGTON, D. C.: The governing board of the District of Columbia consists of three members, two of whom are appointed by the President with confirmation by the Senate, and one army engineer who is detailed for four years. There are no elected officers.

WATERVILLE, MAINE: The city has a bicameral council consisting of 14 councilmen and seven aldermen.

WAYNE, MICHIGAN: Three councilmen are elected for two-year terms and two councilmen for four-year terms.

WICHITA, KANSAS: The city owns the water supply system but the distribution system is privately owned.

WINFIELD, KANSAS: Two councilmen have four-year terms, one has a two-year term.

WINONA, MINNESOTA: The councilman at-large is elected for a two-year term.

WOODWARD, OKLAHOMA: The city owns two airports; one is operated by the city and the other is leased to a private operator.

WOONSOCKET, RHODE ISLAND: The city has a bicameral legislature consisting of 15 councilmen who receive $200 and five aldermen who receive $300.

State Municipal Leagues in 1951

By Carl H. Chatters

Executive Director, American Municipal Association, Chicago

STATE leagues or state associations of municipalities are voluntary associations of municipal corporations. In this respect they are in contrast with the many public employee professional groups whose interest is primarily in the individual official in his professional capacity. The state leagues of municipalities are concerned with the over-all problems of the municipal corporation as such. Much of the work of the leagues, therefore, lies in legislative activity and in the formulation of municipal policy. But the leagues also act as service bureaus for their member cities and the officials of these cities. The state leagues of municipalities cooperate through the American Municipal Association.

Members and Income. The annual income of all state leagues of municipalities combined exceeded one million dollars in 1951 for the first time. This compares with $171,000 in 1934 and $421,000 in 1943. The combined membership of all leagues also reached a new high in 1951 when 41 state associations reported 11,019 members compared with 10,843 in 1950, 4,942 in 1934, and 8,567 in 1945. The state associations in Arkansas, California, Kansas, New Jersey, Tennessee, and Wisconsin had the highest membership in their history. The New Jersey State League of Municipalities through its membership represents 96.3 per cent of the total state population. California has 302 out of 305 cities among its members.

In the 41 state associations of municipalities there were 11,019 members at the close of 1951. This represents almost all of the incorporated municipalities in the states where such organizations exist. Some of the leagues suffered minor losses in membership during 1951 due to increased dues schedules. But 23 of the leagues made sufficient net gains so that the total net increase was 176. The fact that the leagues represent such a large proportion of the incorporated municipalities in each state makes them effective agents of the municipal corporations.

The total income of the state municipal leagues in 1951 was $1,046,986. The League of California Cities had income exceeding $125,000. Michigan, New York, and New Jersey all had revenues well in excess of $50,000. Illinois and Washington had available more than $40,000 each. Other leagues whose income was between $25,000 and $40,000 include Alabama, Florida, Iowa, Kansas, Minnesota, North Carolina, Oregon, Texas, Virginia, and Wisconsin. New dues schedules were adopted during the year by the leagues of Alabama, Florida, Georgia, Kentucky, Minnesota, Missouri, Montana, Pennsylvania (boroughs), Tennessee, and Wisconsin.

The year saw progress in the organization of new state leagues of municipalities. In January New Mexico started a state league of municipalities. The League of Alaskan Cities just completed its first full year of operation. The Montana League had a full-time director for the first time. In Ohio the supreme court made an important decision which will permit the cities to organize and pay dues to a state league. The Kansas League has taken steps to establish itself legally as an instrumentality of the state, and with other local government associations is forming a corporation to construct a building for joint headquarters.

League-Sponsored Legislation. Practically all state legislatures met in 1951. Accordingly, legislation was an important activity of the leagues during this period. Alabama had one of its most successful legislative years with the legislature approving 24 out of 27 league-sponsored bills. In Alaska 10 out of 16 league proposals were signed into law by the governor. Arizona prepared nine measures which will be submitted to the 1952 legislature. In Arkansas the league preserved the municipal revenues coming back from the state and passed other important legislation. The Florida League was successful with the program it undertook. Georgia's home rule bill passed the legislature. Idaho passed legislation authorizing the use of municipal revenue bonds, establishing a uniform method of appointing city clerks, and giving municipalities a percentage of state highway revenues. Iowa sponsored a revision and condification of the municipal laws in the state. Michigan worked on a complete revision of the state highway laws and an equitable distribution of motor user revenues. Minnesota passed a civil service enabling act. New Jersey successfully supported an act for consolidating local health districts, sponsored amendments to the commission government law, and took an active part in legislation affecting the administration of public welfare.

The New York legislation pertained primarily to separation of school districts from city governments in cities of less than 125,000 population. The constitutional debt limits for cities and city school districts were also separated. The North Carolina League had the greatest legislative fight in its history to obtain for its cities a substantial sum for highway aid. It was significant that 383 out of 386 qualified cities helped with the consideration and passage of this legislation. The North Dakota League promoted the passage of a one cent cigarette tax for incorporated cities and villages. Pennsylvania cities as a result of new legislation increased state aid to cities and secured vetos on legislation fixing police service hours and increasing truck weights.

The League of Texas Municipalities checked 1,306 legislative bills and 50 proposed constitutional amendments to see which affected cities. Weekly reports were made to all members on the legislation. The Wisconsin League was generally successful in its legislative activities, particularly in maintaining the principles of home rule. The Indiana League, too, caused the defeat of several bills detrimental to home rule. Missouri passed legislation permitting the issuance of sewer revenue bonds. Oregon obtained for its cities 5 per cent of the net state revenues from liquor. Illinois created a legislative commission to study municipal revenue, the corporate tax rate was increased by 10 per cent, and the motor fuel tax going to cities was increased. South Carolina sponsored legislation for study of the allocation of state revenue to municipalities.

Washington had a successful legislative year including improvement in

---

† The date in this column refers in most instances to the beginning of a loosely knit organization of cities on a corporate basis for the purpose of presenting municipal problems before the legislature.

‡ This date is the year when an active service organization, as now known, was established.

§ Approximate date.

Note: According to the records of the American Municipal Association, there are 12 active leagues with an uninterrupted existence: California, Florida, Iowa, Kansas, Michigan, New Jersey, New York, Oklahoma, Pennsylvania, Texas, Virginia, and Wisconsin.

election procedure and annexation laws, raising the limits on which bids are required, and getting home rule for local government office hours. California secured legislation to broaden the tax basis of cities, to authorize the levy of a use tax by municipalities, and clarified the statutes regarding special tax levies above the one dollar limit. Enabling legislation to permit municipalities to participate in the Federal Social Security Act was sponsored or supported by many leagues including Georgia, Maryland, Michigan, North Carolina, Pennsylvania, Wisconsin, Illinois, Utah, and Washington.

Periodicals Issued. Twenty-seven leagues are now publishing magazines with a combined circulation of over 125,000. New magazines or bulletins were established this year by the Georgia and Montana leagues; a larger and improved format was introduced by the Minnesota League; and similar improvements were set up for 1952 by Colorado and Georgia. Leagues continue increasingly active in sponsoring or co-sponsoring training courses for municipal officials. At least 18 leagues were active in such programs in 1951. The Idaho League started a group insurance program for municipalities in that state. Other leagues have heretofore organized this type of specialized service for member cities.

Annual and Special Meetings. Attendance at the annual meetings of the state leagues of municipalities reached new highs in many places. New Jersey had 1,507 delegates who paid a registration fee. Many league meetings drew in excess of 500 persons. Some special meetings also were held. The League of California Cities held a special emergency civil defense meeting in January, 1951, attended by 494 representatives from 210 cities. Colorado had 13 district meetings in the fall and set up the framework for a continuing district organization in each region. Florida had four district meetings, widely attended, to explain the Federal Social Security Act.

Mississippi held a series of highly successful regional meetings. Oregon conducted 20 regional meetings and helped set up regional police classes and basic police training schools. The Association of Washington Cities had a successful state meeting to formulate a state municipal policy and a series of regional meetings. The Louisiana Municipal Association sponsored a very successful municipal finance study group. The South Dakota League co-sponsored a short course for sewage works operators.

Other Services. The emphasis placed on legislation should not obscure the fact that the primary activity of most of the state associations is the gathering of information and the conduct of research. These are less spectacular and make less exciting news than legislative work. During 1951 Arkansas expanded its information service on the financial condition of cities and towns. Kansas finished a two-year project codifying the ordinances of Kansas City The North Carolina League continued its work on zoning and the codification of city charters and ordinances. Wisconsin made several studies including reports on police and fire commissions and the extension of utility service beyond municipal limits. Nebraska completed its city official handbook.

Other interesting and useful activities were carried out by some leagues. The Maine Municipal Association appointed a committee on federal-municipal relations to study federal programs affecting municipalities and to recommend policies for the Association. South Carolina established six standing committees modeled after similar committees of The American Municipal Association. The League of California Cities conducted a statewide examination for the job of administrative assistant to the mayor or manager. Eighty-nine persons took the examination. Colorado and Missouri intervened in telephone rate cases on behalf of member cities. The League of Virginia Municipalities answered more than 1,000 inquiries from members during the year.

Appraisal. The municipal league movement has gained great momentum during the past few years. The state leagues of municipalities in each state are now looked upon as potent organizations serving the residents of the municipalities in the state and representing municipal government before the state legislature and other public bodies. A movement which has spread through most of the states and has one million dollars annually behind it and a record of 50 years of service must be considered mature, useful, and powerful.

Personnel Administration

Developments in 1951

BY KENNETH O. WARNER

Director, Civil Service Assembly of the United States and Canada, Chicago

DURING 1951 events in the public service, like industry, were influenced by two dominant forces—the accelerated defense program and the attendant impact of inflation on the cost of living. The direct effect these forces had on public personnel administration can be measured in terms of: (1) the increased difficulty in recruiting to fill vacancies; (2) the higher rates of turnover; and (3) the insistent demands of employees for pay raises. The year was also marked by action on the part of state legislatures to open the way for state and local employees to join the federal social security program. To date, 35 states and the Territory of Hawaii have passed the necessary enabling legislation.

Mobilization. Government employees—federal, state, and local—numbered 6,801,000 in October, 1951, an all-time high, exceeding even the peak of civilian public employment reached in 1945 during World War II. In the federal service, where the stepped-up defense program created large demands for staff, employment figures climbed steadily during the first half of the year. At the beginning of the year total federal civilian employment was 2,204,000. By September this number had increased to 2,529,000. During the remainder of the year federal employment leveled off slightly below the September mark. All told, since the Korean crisis arose in the summer of 1950 federal civilian employment increased by 500,000.

In comparison with the federal service, employment in state, county, and municipal governments, remained stable throughout the year. According to Bureau of the Census figures, there were 4,287,000 employed by state and local governments in October, 1951, only 2,000 more than was reported 12 months earlier. The year marked the end of the postwar rise of more than 1,000,000 in number of state and local government employees.

Even though the number of state and local employees remained about the same during 1951, personnel agencies serving state and local governments had difficulty recruiting sufficient numbers of employees to fill vacancies. Losses to the armed forces and to expanding defense industries were the main factors responsible for this.

To cope with this situation personnel agencies increased their effort to attract candidates and worked towards getting new employees on the job with the least possible delay. To attract potential candidates more agencies made use of newspaper, radio, and television facilities. In California, for example, the United States Civil Service Commission and the California State Employment Service jointly sponsored a weekly TV program which was successful in recruiting federal and state employees. Other agencies found that simply by improving the format of their examination announcements they were able to get more candidates than normal. Miami, Florida, increased its candidate list, in some cases up to 50 per cent, by using art work on examination announcements.

In order to speed up the process of getting new employees on the job more use was made of "continuous" examinations, which permit candidates to take examinations whenever they wish. Other agencies streamlined their examination procedures to cut down the elapsed time between the dates of examination and certification. In Sacramento, California, for example, an eligible list for police patrolman was established two weeks after the examination; previously it had taken 10 weeks.

Tied in with the shortage of workers is the attention being given to the employment of physically handicapped and older persons. During the year the President's Committee on National Employ the Physically Handicapped Week developed a statement of policy for employment of the physically handicapped in public service. This statement urged units of government to: (1) adapt physical standards to the realistic requirements of jobs; (2) make fair appraisals of the qualifications of physically handicapped applicants and employees; and (3) appraise physical abilities of handicapped persons in relation to the essential physical requirements of jobs.

Other devices that helped alleviate recruiting difficulties in some fields were the employment of women in jobs traditionally held by men, the dropping of residence requirements, and the extension of age limits.

Salary Trends. While the number of persons employed by state and local governments was practically unchanged during the year ending in October, 1951, Bureau of the Census figures show that state and local payrolls increased 10 per cent during the year to a new high of $1,008,000,000 for the month of October. With the federal government included, public payrolls for October, 1951, totaled $1,801,000,000. This is also an all-time high, up 10 per cent from six months earlier and 18 per cent from October, 1950. Since total public employment is now only slightly above the end-of-war level of six years ago, most of the intervening net increase of 62 per cent in monthly government pay rolls reflects higher rates of pay for public employees.

As the above figures show, many government legislative bodies approved pay increases for employees during the year. This was particularly true in state governments where state legislatures meeting in biennial sessions during 1951 had their first opportunity to act on pay increases for state employees since hostilities in Korea began. During the year Congress voted salary increases for federal employees ranging from a minimum of $300 to a maximum of $800.

Legislation. In their 1951 sessions the legislatures of Kansas, Rhode Island, Illinois, Alabama, Minnesota, and Hawaii passed laws designed to strengthen personnel programs within their jurisdictions. The Kansas legislature abolished the joint merit system council which was the personnel agency for the federal grant-in-aid programs and turned over the functions of that agency to the state department of civil service. Now a single personnel agency serves all branches of Kansas state government.

In Rhode Island an act was passed calling for the coordination of finance, personnel, and other service functions of the state under one department—the department of administration. Within the new department there is the division of personnel administration headed by a personnel administrator. The civil service commission was abolished and its functions transferred to a newly created board of appeals, which will report it's findings and recommendations to the Governor. The board has advisory power only.

Alabama became the tenth state to place the merit principle in the state constitution. The Minnesota legislature made it possible for any second, third, or fourth class city or village to establish a merit system by ordinance.

Among the municipalities that passed significant personnel legislation during the year were Omaha, Nebraska; Philadelphia, Pennsylvania; Arlington County, Virginia; St. Louis County, Missouri; and Fulton County and Atlanta, Georgia. Omaha adopted an ordinance consolidating the two separate city personnel boards, while Philadelphia voters approved a new city charter which strengthened and expanded the city's civil service system.

In Phoenix a three-member personnel committee was established to consider all matters involving the personnel program. The committee consists of the city manager as chairman, the personnel director as secretary, and a third member who is selected from among department heads on a rotating basis in order to familiarize all of them with personnel policies.

Arlington County, Virginia, and St. Louis County, Missouri, passed legislation providing for the establishment of personnel program for county employees. Fulton County and Atlanta were authorized by the Georgia General Assembly to develop a uniform personnel program with similar pay and classification plans and standards of selection. At the same time a number of county employees were transferred to the city service.

Significant Court Decisions. A decision of the Pennsylvania Supreme Court nullified the 10-point preference given to veterans on promotional examinations, as provided by the state civil service law. Veterans preference as it affects original appointments was sustained. The United States Supreme Court decided two cases, both involving loyalty oaths. The court ruled in favor of the controversial Ober Loyalty Law of Maryland which gives the state power to force candidates for state and city offices to swear they are not engaged in attempts to overthrow the government and are not members of organizations engaged in such attempts. The court upheld the same principle in a case involving loyalty oaths for employees of the city of Los Angeles.

The San Francisco Civil Service Commission appealed a superior court decision requiring the commission to disclose the identity of private firms that supplied employment and salary data. The decision by the California District Court of Appeals upheld the lower court.

New Developments. A review of the studies completed by "Little Hoover Commissions" points up a number of trends which may become more meaningful as time passes. These trends show that the independent nature of personnel agencies is being questioned and more thought is being given to integrating personnel management with other phases of administration. In practice an increasing number of states are including divisions of personnel within the recently created over-all departments of administration. There is also a trend towards having a single administrator at the head of the personnel department, with a personnel board to advise the administrator and act as an appeal body in disciplinary cases.

Other recommendations stemming from "Little Hoover Commission" studies advocate the extension of the merit system to more classes of state employees; provide for the appointment of professionally qualified personnel directors and staffs; and suggest that recruiting techniques and training programs should be strengthened.

Five California cities—Santa Monica, Burbank, Glendale, Pasadena, and Los Angeles—in July started a joint venture to try to establish some cost breakdowns of personnel department operations. The cities have agreed on 20 work units which cover virtually all operations of any of the departments. Accurate records will be kept to give the cost of each function. This information can serve as a basis for comparison among the five cities; it can also be used to justify budget requests, and can help in analyzing costs for the purpose of reducing them.

It appears that personnel agencies and other government departments are making increased use of consulting firms. One firm, for example, performed survey and installation activities for 20 cities, 3 counties, 7 states, 2 federal agencies, and one university. Boston and New York were two of the largest cities where consulting firms worked on classification surveys during the year.

In New York state the civil service commission was authorized to designate security positions and agencies and was made responsible for hearing appeals of employees removed for security reasons. The New York state commission also organized and directed a civil defense training program for employees in the civil service department. This pilot program is to serve as the basis for training to be extended to other state departments. In Los Angeles the civil service department was given the responsibility for maintaining all necessary records of the civil defense and disaster board of the city.

Professional Organization. The Civil Service Assembly of the United States and Canada, the professional organization for public personnel agencies and officials (1313 East 60 Street, Chicago 37) held one national conference and four regional conferences during 1951. Well over 700 delegates attended the Assembly's annual conference on public personnel administration in Detroit, Michigan, October 8-11. During the year chapters of the Civil Service Assembly were established in Albany, New York; Washington, D.C.; and Southern California. Other chapters are in Michigan and in Springfield, Illinois. The annual study of "Pay Rates in the Public Service" was distributed to all CSA agency members in March and October.

Salaries of Municipal Officials

THE salary data for selected administrative officials in Table VI are based on information supplied early in 1952 by municipal officials. The names of the mayor, city clerk, chief finance officer, director of public works, fire chief, and police chief in cities over 10,000 population are given in Table XVIII, and mayor and city clerk in cities of 5,000 to 10,000 population in Table XIX. Names of city managers are given in Table XVII. Salary data for the officials in Table VI are also reported in the 1949, 1950, and 1951 Year Books, and with the exception of planning director in the 1946, 1947, and 1948 Year Books. The 1942 and 1944 Year Books report salary data for most of these positions.

Every attempt was made to exclude from Table VI salaries of part-time officials, those paid in whole or in part by fees or who receive a nominal sum such as $1 per year, and other such special cases, although this was not always possible on the basis of information reported. All salaries below $2,000 were excluded to avoid including the salaries of part-time officials in the average and distribution, except in the case of the mayor in council-manager cities. The mayor in such cities is generally a part-time official and his salary is usually a nominal sum, often below $2,000 and not at all comparable with the amounts shown for the other positions. The salaries of attorney and health officer are included whether designated as part-time or not, as long as the salary is not below $2,000 as a minimum, because so many of these officials customarily carry on private practices while holding public office.

In cases where an individual held more than one position, the total salary received from the several positions was considered and this salary classified under the first of his positions as shown in Table VI; for example, if an individual was reported holding the positions of city clerk, treasurer, and purchasing agent, he was classified as city clerk, and the total salary was included under "city clerk." Cost-of-living bonuses were included where known.

Some interesting comparisons can be made between the rank order of median average salaries of selected officials in the several population groups. City managers and superintendents of schools are the two highest paid positions in all but the first population group (cities over 500,000) where the superintendent of schools is first and the mayor second. Also in the population group of cities over 500,000, the attorney is third and director of public works fourth. In cities of 250,000 to 500,000 and 100,000 to 250,000, mayors (nonmanager cities), health officers, and attorneys follow. In the 50,000 to 100,000 population group, the mayor (nonmanager cities) is third and director of public works fourth. In the groups 25,000 to 50,000 and 10,000 to 25,000, the engineer and director of public works follow the city manager and superintendent of schools.

Table VI

SALARIES OF SELECTED MUNICIPAL OFFICIALS IN CITIES OVER 10,000 POPULATION BY POPULATION GROUPS: 1952

The annual salaries of selected municipal officials as of January 1, 1952, for individual cities were supplied to the Year Book directly by city officials in January and February, 1952. Only salaries of $2,000 or more have been included except for mayors in council-manager cities, whose salaries are reported regardless of amount. In the population group, cities over 500,000 the positions of Mayor (council-manager cities), City Manager, and Director of Finance are not shown since there is only one council-manager city in this group and because only three cities reported salaries for Director of Finance. The lower quartile, the median, and the upper quartile are found by arranging all salaries in order of increasing size, and counting from the lowest salary one-fourth, one-half, and three-fourths of the total number of cases. For further explanation of quartiles, medians, and mean averages, see the section "How to Use the Year Book."

Title of Official	No. of Cities Reporting	Mean Average Salary 1952	Distribution of 1952 Salaries				
			Lowest	Lower Quartile	Median	Upper Quartile	Highest
CITIES OVER 500,000							
Mayor (nonmanager cities)	14	$17,627	$ 9,000	$13,482	$16,500	$20,000	$40,000

Pay Rates for Selected City Jobs

CHIEF municipal administrators are concerned with the problem of maintaining adequate pay rates and one of the factors to consider is the amount paid for similar work by other cities in the region. To secure up-to-date information the International City Managers' Association in January, 1952, sent an inquiry to a group of cities under 100,000 selected on the basis of size and geographical location. At the same time, the Civil Service Assembly of the United States and Canada sent a questionnaire to selected cities over 100,000 and made the returns available to ICMA. Information reported by 89 cities for 14 jobs is set forth in Table VII. Not all cities reported on each job because officials were requested to report pay rates only if they had jobs comparable to the job descriptions which accompanied the questionnaire (see below).

In determining the adequacy of a given pay rate in a particular city it is more important to know what other cities of comparable size in the same general area are paying than it is to compare the rate with an average rate paid by cities unlike in size, type, and geographic location. For this reason no attempt is made here to present average or median pay rates for cities reporting in the survey.

In making salary comparisons officials should consider the vacation and sick leave policy, number of hours in the work week, type of retirement plan in effect, and other related matters. Data on working conditions for administrative and clerical employees are given in Table VIII and for firemen in Tables XIII and XIV and policemen in Table XV.

For comparison with salaries reported in 1951, see pages 119 to 123 of the 1951 Municipal Year Book. Although some variation exists from one city to another, the 14 jobs shown in Table VII are among the most standardized jobs in local government.

Minimum and maximum pay rates for all 14 jobs have been raised by one-half or more of the cities that reported in both 1951 and 1952. The four jobs raised by the highest proportion of the cities are: policemen, 80 per cent; firemen, 78 per cent; labor foreman, 73 per cent; and bookkeeping machine operator, 71 per cent. Only two classes were raised by less than 60 per cent of the cities reporting: junior draftsman by 59 per cent of the cities and junior accountant by 54 per cent of the cities.

Job descriptions for the jobs for which pay rates are reported in Table VII follow:

Junior Typist-Clerk. Types reports, case records, statements, letters, charts, and other material from copy and rough drafts; performs simple clerical work, such as receiving and distributing mail, checking computations, maintaining mailing lists, operating a Mimeograph, and filing.

Junior Stenographer-Clerk. Takes and transcribes routine dictation; does general typing and simple clerical work; prepares simple tabulations; keeps time records; occasionally operates duplicating machines and other office appliances.

Bookkeeping Machine Operator. Operates a bookkeeping machine and performs related clerical work involved in keeping accounts and preparing financial statements and accounting reports; posts classified financial data to detail and controlling accounts, ledgers, and journals and proves operations and balances ledgers; prepares recapitulations and other routine statistical accounting reports.

Junior Accountant. Does professional-level accounting work, such as preparing financial statements and balance sheets; setting up new accounts and ledgers; auditing accounts; and preparing budgets. Sometimes supervises group of clerical workers operating accounting system.

Laborer. Does simple manual labor, usually under close supervision; digs ditches; cuts grass and weeds; moves heavy materials such as lumber, pipes, sand and gravel; picks up trash and removes debris.

Labor Foreman. Directs a small crew of laborers, performing such work as excavating or moving lumber, gravel or dirt; may work with crew assisting personally in performance of work.

Truck Driver. Drives a panel or other light or medium truck in carrying materials or in making collections or deliveries; may supervise a small number of unskilled workers who make collections or deliveries; may service but does not repair equipment; keeps simple records.

Automobile Mechanic. Does skilled automotive equipment repair work of a journeyman level; inspects and locates mechanical defects; overhauls, repairs, and adjusts automobiles, trucks, and other automotive equipment.

Junior Draftsman. Makes tracings and drawings of engineering plans and designs (structural, mechanical, civil, etc.); reduces field party notes; prepares maps, charts, and other drawings from engineering or architectural work; does difficult engineering clerical work.

Junior Civil Engineer. Performs beginning level professional office and field civil engineering work, including the performance of instrument work in surveying property and building sites; performs simple engineering work in inspecting and testing on construction and maintenance projects; prepares designs, plans, specifications, and estimates requiring the use of limited independent judgment.

Playleader. Organizes and directs the recreational activities of a small summer playground or play center; or assists in directing such activities at a large recreation center. Does occasional clerical work issuing permits, and makes routine reports.

Policeman. Does general duty police work in the prevention of crimes and enforcement of laws; serves as a patrolman in an assigned area; handles traffic control, either on foot or as motorcycle patrolman; makes investigations of crime either in uniform or in plain clothes.

Fireman. Does skilled work in fighting fires of all types and in the maintenance of fire-fighting equipment; engages in such fire prevention activities as locating and securing the abatement of fire hazards in commercial, industrial, residential and other structures and properties.

Building Inspector. Inspects new construction and alterations for possession of permits and conformity with building code requirements in regard to such features as soil conditions for piling, size of excavations, set-backs, foundations, vents, structural columns and beams, materials and the like; secures evidence of violations and makes arrests.

TABLE VII

PAY RATES FOR SELECTED CITY JOBS: JANUARY, 1952

Data were secured from city officials in January, 1952, by the International City Managers' Association and the Civil Service Assembly among cities selected on the basis of population and geographical location. The starting and top pay rates are shown for each job. Rates are given on a monthly basis except for "Laborer," "Labor Foreman," and "Truck Driver" where all rates are shown on an hourly basis. A double dagger (‡) in any of these three columns indicates rates have been converted from weekly or monthly amounts on the basis of the hours in the work week reported by individual cities. See preceding article for job descriptions. Leaders (. . .) indicate city does not have comparable jobs or data not reported.

Professional Organizations of Municipal Officials

TWENTY-TWO national organizations of chief municipal officials who generally are appointed are listed in this section. One of them is the American Society for Public Administration which cuts across all levels of government as well as all municipal functions. All 22 organizations hold annual conferences, most of them carry on some research, and all are interested in improving the administration of municipal activities. All of the 22 organizations have full-time secretariats.

Most of these organizations have individual memberships, and several also have agency, institutional, or service memberships or fees. The latter type of membership is based on the population of the jurisdiction in three instances (city attorneys, municipal finance officers, and public works directors), and on the annual revenue of the agency in two other organizations (librarians and utility directors). The agency memberships of several other organizations have varied bases, such as number of permanent dwelling units managed (housing officials), annual purchasing volume (purchasing agents), and administrative costs of the agency (welfare officials).

Individual membership dues are inadequate in most instances to finance the cost of specialized individual service requested by cities. The Civil Service Assembly has a service fee, in addition to individual memberships, based on the number of employees under the jurisdiction of the personnel agency. The American Society of Planning Officials and the International City Managers' Association provide information services with fees based on the population of the municipality.

The advisory aids available through the secretariats of their national organizations give local officials an excellent method of obtaining quickly expert advice and factual information on a given problem. The information secured in this way enables local officials to improve local administration organization and practice and thus improve the quality of the service rendered to the people of their city. The organizations housed at 1313 East 60 Street, Chicago, together with the National Municipal League, are represented on the governing board of Public Administration Service which provides a field consulting service for governments on a cost basis.

These voluntary associations of public officials provide many of the services which in other countries would be the responsibility of the central government. They arrange annual and regional conferences, publish newsletters and magazines, answer inquiries, conduct in-service training courses, provide a placement service for members, and formulate service and cost standards for various municipal activities.

All of these national organizations perform a useful service in keeping their members in touch with progressive developments in their respective professions. In a small or medium-sized town there are few if any persons with whom local officials can "talk shop." The opportunity to meet and exchange ideas and experiences with other men in the same profession is of value not only to the individual but also to the municipality he serves.

The 22 organizations are listed in the order of their establishment with the name of the secretary or director and address. Periodicals and special reports and books issued by each organization are listed in the "Sources of Information" at the end of each section of this Year Book. It is significant that eight of the 22 organizations described below are 50 or more years old. Four others were organized between 1900 and 1930, seven during the decade from 1930 to 1940, and only three since 1940.

American Association of School Administrators (1865). Worth McClure, executive secretary, 1201 16 Street, N.W. Washington 6, D.C.

American Public Health Association (1872). Reginald M. Atwater, executive secretary, 1790 Broadway, New York 19.

International Association of Fire Chiefs (1873). James F. Jagger, general manager, 11 East 38 Street, New York 16.

American Library Association (1876). David H. Clift, executive secretary, 50 East Huron Street, Chicago 11.

American Water Works Association (1881). Harry E. Jordan, secretary, 521 Fifth Avenue, New York 18.

International Association of Chiefs of Police (1893). Edward J. Kelly, executive secretary, 1424 K Street, N.W., Washington 5, D.C.

American Public Works Association (1894). Donald F. Herrick, executive director, 1313 East 60 Street, Chicago 37.

American Institute of Park Executives (1898). Weldon B. Wade, executive secretary, 30 North LaSalle Street, Chicago 2.

Civil Service Assembly of the United States and Canada (1906). Kenneth O. Warner, director, 1313 East 60 Street, Chicago 37.

Municipal Finance Officers Association (1906). Joseph F. Clark, executive director, 1313 East 60 Street, Chicago 37.

National Recreation Association (1906). Joseph Prendergast, executive director, 315 Fourth Avenue, New York 10.

International City Managers' Association (1914). Clarence E. Ridley, executive director, 1313 East 60 Street, Chicago 37.

Municipal Personnel Data

THE typical city over 10,000 in 1951 has approximately 16 employees per 1,000 population and a monthly payroll of $3,600 per 1,000. The city has one or more civil service boards composed of three members appointed by the mayor or the council covering all employees. City hall employees work 40 hours per week and a half-day on Saturdays. Overtime is compensated by equal time off for administrative and clerical employees and by straight-time pay for skilled workers. The city grants two weeks paid vacation per year which may be increased with length of service and allows 12 to 15 days sick leave with pay per year cumulative to 60 days. Employees generally are covered by a retirement plan and are organized in either a nationally affiliated union of public employees or in an unaffiliated local employee organization. This article and accompanying tables summarize personnel practices in cities over 10,000 population, and Table VIII presents individual city data.

TABLE 1

NUMBER OF EMPLOYEES AND AMOUNT OF MONTHLY PAY ROLL BY LEVEL OF GOVERNMENT: OCTOBER, 1951

	Total Employees (in thousands)	Per Cent of Total	Pay Rolls (in millions)	Per Cent of Total
Federal civilian	2,514	37.0	$ 792.9	44.0
Public education	1,759	25.9	452.5	25.1
State	754	11.1	177.7	9.9
City	1,102	16.2	253.9	14.1
County and other	672	9.9	123.9	6.9
Total public employment	6,801	100.0	$1,800.9	100.0

Ninety-six per cent of the cities over 10,000 population provided information for the 1952 Municipal Year Book on some phase of their personnel administration. The inclusion of New England towns and New Jersey and Pennsylvania townships this year and changes resulting from the use of final 1950 census figures added a net total of 118 cities to the previous total of 1,228 over 10,000 population. Table VIII lists 1,295 of these 1,346 cities and shows specific data on number of employees, payroll volume, personnel management, personnel policies and practices, and employee organizations reported by the cities (employees of local school systems are excluded).

Employment and Pay Rolls. Table 1 shows United States Bureau of the Census estimates of the distribution of total public employment and pay rolls among different levels of government for October, 1951. When city data in Table 1 are compared with the corresponding employment data in the 1951 Municipal Year Book, they show practically no change in the number of employees but an increase in payroll volume of 10 per cent between October, 1950 and October, 1951.

Table 2 shows the trends in municipal employment and payrolls in cities over 25,000 for 1941 through 1951, omitting 1942, 1944, 1946, and 1948. Data in Table 2 are for total number of full-time employees and total payrolls covering all classes of employees engaged in all municipal functions except education. Employment and payroll data are for October, 1951, unless otherwise indicated and are taken from an unpublished tabulation supplied by the Bureau of the Census, based on city reports for current census surveys of governmental employment. The figures include employees and payrolls of city-operated utilities and other activities presented separately in previous Year Books under the heading, "City Government Enterprises."

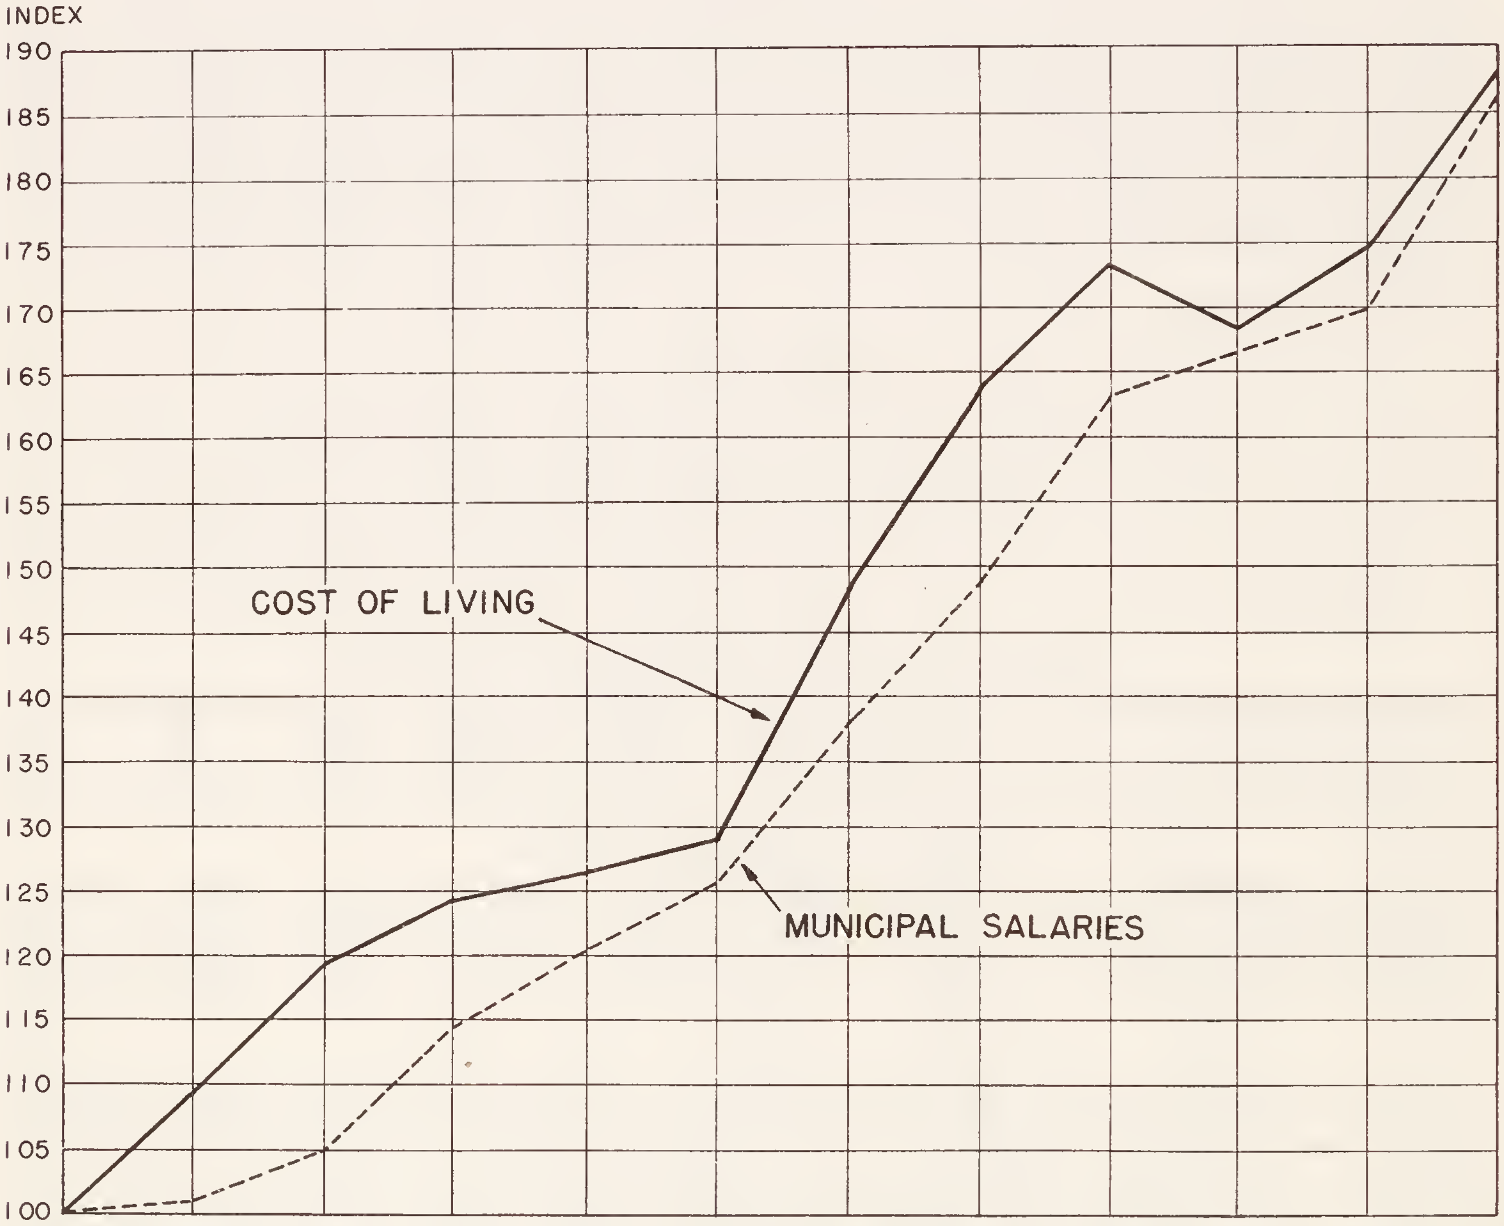
TABLE 2

MUNICIPAL NONSCHOOL EMPLOYMENT AND PAY ROLLS: MONTH OF OCTOBER, 1941–1951

Population Group	1941	1943	1945	1947	1949	1950	1951
TOTAL NUMBER OF EMPLOYEES (IN THOUSANDS)							
Cities over 100,000.	488	471	469	531	572	598	605
25,000 to 100,000	126	116	121	143	156	165	167
All cities over 25,000	614	587	590	674	728	763	772
TOTAL PAY ROLL (IN MILLIONS)							
Cities over 100,000.	$75.6	$81.9	$ 89.2	$120.4	$145.7	$154.9	$171.3
25,000 to 100,000	15.3	16.8	19.6	26.9	32.5	35.4	39.5
All cities over 25,000	90.9	98.7	108.8	147.3	178.1	190.3	210.8

School employees are excluded from the employment and payroll figures shown for individual cities in Table VIII, even where schools are operated as a part of the city government. All other full-time paid municipal employees and officials (including those on a fee basis) are counted under "Total Number of Employees," but employees of contractors are not included. Figures on "Full-Time Employees" include temporary personnel working on a full-time basis and are therefore not directly comparable with census statistics presented in previous issues of the Year Book as to "permanent full-time employees." All figures, including those for individual cities in Table VIII, cover employees and payrolls for city-operated utilities as well as personnel engaged in nonschool "general government" activities.

Civil Service Organization. Formal civil service commissions, the size of the board, and employees covered are shown for individual cities in Table VIII, and summarized in Table 3. The term "civil service" has the traditional meaning in this section and in Table VIII of a semiautonomous lay board responsible for recruiting and examining potential employees, certifying them for appointment, and hearing appeals from suspension, dismissal, and other administrative acts. Table 3 shows the number of cities in which there is some kind of formal civil service and the proportion in which all classes of employees are covered. It also shows classes of employees for which a formal civil service system most commonly exists. From the table it can be seen that while two-thirds of the cities have formal civil service systems, only about one-third cover all employees; nearly one-half the cities under 25,000 population have no formal civil service system.



Source: Bureau of Labor Statistics and Bureau of the Census

INDEX OF COST OF LIVING AND MUNICIPAL SALARY INDEX: 1940 TO 1951

The "cost-of-living" index is the consumers price index which is the average cost of items making up 70 per cent of family budgets of wage earners and lower-salaried workers in large cities, compiled by the United States Bureau of Labor Statistics (average 1939-39=100). The "municipal salary" index was obtained by dividing the total monthly nonschool pay rolls of cities over 25,000 by their total nonschool employment for October of each year—both figures being obtained from the Bureau of the Census survey of public employment—and converting the resulting average monthly earning amounts to a basis of October, 1940=100. The resulting index is thus affected by changes in the composition of total employment (which includes part-time and temporary help), and in the length of working periods, as well as in actual rates of pay. The chart is based on the index for October 15 of each year.

TABLE 3

EMPLOYEES UNDER CIVIL SERVICE

Population Group	No. of Cities Reporting	No. of Cities With Civil Serv.	Employee Groups Covered by Civil Service						No Civil Service System

All cities over 10,000 ...	1,181	780	402	34.1	275	14	49	40	401

[1] Includes cities codes as "ALL", "FG", "PG", and "FPG" in Table VIII and may exclude day laborers, employees under elected officers, temporary employees, and employees of library, health, and welfare departments.

The statutes of several states require that the city shall provide a civil service system for certain groups of their employees. Iowa and Ohio require cities to have a three-member civil service board appointed by the mayor to serve all the employees. New York requires each city to provide a three-member civil service commission appointed by the mayor to serve all employees or to make use of the county civil service commission. In either case the city may have a full-time personnel department. New Jersey cities may operate under the state civil service commission which provides state-wide recruitment, examination, certification, classification, and specific rules regarding veteran's preference, promotion, pay, and political activity.

In Massachusetts state law requires that all cities over 100,000 population operate under the state civil service commission. Cities under 100,000 may elect to use the state system. All Wisconsin cities over 4,000 population must provide a five-member police and fire commission appointed by

TABLE 4

RESPONSIBILITY FOR PERSONNEL MANAGEMENT

Population Group	No. of Cities Reporting	No. of Cities Where Chief Executive Has Primary Responsibility			No. of Cities Where Responsibility is in:

10,000 to 25,000..........	565	65	189	5	105	51	9	141
All cities over 10,000	964	93	266	63	191	71	70	210

the mayor. In addition to personnel matters, the commission may also have certain administrative duties. In Alabama a personnel board appointed by the officials of the county and its largest city handle personnel functions for all cities over 5,000 in the larger counties of the state. Other states, for example Minnesota and New York, provide services to cities on a contractual basis.

A total of 780 cities shown in Table VIII operate under civil service. Of these, 534 have three-member boards, 115 have five-member boards, 13 have boards of other sizes ranging from two members to nine members, and 112 operate under state or county systems. State systems are used by 38 cities in Massachusetts and 40 in New Jersey. County systems are used by 18 cities in New York, nine in California, and seven in Alabama.

TABLE 5

HOURS WORKED PER WEEK BY CITY HALL EMPLOYEES

Population Group	No. of Cities Reporting	Reporting Cities Having Work Week of:									
		37½ Hrs. or Less		38-39½ Hrs.		40 Hrs.		40½-43½ Hrs.		44 Hrs. and Over

All cities over 10,000 .	1,200	189	15.7	149	12.4	417	34.8	87	7.3	358	29.8

Civil service boards are appointed by the mayor in 260 cities and by the city council in 274. The city manager appoints the civil service board in 11 cities and other officials or combinations of private citizens appoint the board in 67 cities. In cities over 250,000 the mayor is generally the appointing official, while the council appoints the board in the majority of cities under 250,000.

TABLE 6

SATURDAY WORK SCHEDULE FOR CITY HALL EMPLOYEES

Population Group	No. of Cities in Group	No. of Cities Reporting	Full Staff				Skeleton Staff				No Saturday Work	
			All Day		Half Day		All Day		Half Day			
			No.	%	No.	%	No.	%	No.	%	No.	%

All cities over 10,000 .	1,346	1,203	13	1.8	611	50.3	5	0.4	265	21.9	309	25.6

Personnel Management. Officials serving as chief personnel officers and the employees served for individual cities are shown in Table VIII. Table 4 shows where the responsibility for personnel administration lies and gives an additional key to merit system operation. In about 44 per cent of the cities reporting, the chief executive has the primary responsibility for personnel administration. This illustrates continuation of the trend toward uniting civil service, as a merit system, with the chief executive's responsibility for effective administration.

Table 4 shows that there are 133 full-time personnel officers, 70 of whom are appointed by and are responsible to the city council or the Civil Service Board. While this represents an increase of 10 cities with such officials, 472 cities continue to handle personnel matters through the council, department heads, or other officials without central guidance or assistance from a personnel officer or the chief executive.[1]

Hours Worked Per Week. The length of the regular work week for city hall office personnel in 1,200 cities is summarized in Table 5. Employees in 63 per cent of the cities worked weekly schedules of 40 hours or less, but nearly 30 per cent worked 44 hours or more. Inspection of Table 5 shows that nearly three-fourths (73.5 per cent) of the cities over 50,000 population worked 40 hours or less per week, while approximately 60 per cent of the 972 cities under 50,000 worked a 40 hour week or less.

---

[1] Cities with full-time personnel officers by population groups are as follows: over 500,000: Chicago, Illinois; Detroit, Michigan; Los Angeles, California; Philadelphia, Pennsylvania; Baltimore, Maryland; Cincinnati, Ohio; Cleveland, Ohio; Milwaukee, Wisconsin; Minneapolis, Minnesota; New Orleans, Louisiana; Pittsburgh, Pennsylvania; St. Louis, Missouri; San Francisco, California; and Washington, D. C. 250,000 to 500,000: Akron, Ohio; Atlanta, Georgia; Birmingham, Alabama; Dallas, Texas; Denver, Colorado; Fort Worth, Texas; Indianapolis, Indiana; Jersey City, New Jersey; Kansas City, Missouri; Long Beach, California; Louisville, Kentucky; Memphis, Tennessee; Oakland, California; Omaha, Nebraska; Portland, Oregon; Rochester, New York; San Diego, California; Seattle, Washington; and Toledo, Ohio. 100,000 to 250,000: Austin, Texas; Baton Rouge, Louisiana; Berkeley, California; Bridgeport, Connecticut; Cambridge, Massachusetts; Charlotte, North Carolina; Corpus Christi, Texas; Dayton, Ohio; Des Moines, Iowa; Duluth, Minnesota; Flint and Grand Rapids, Michigan; Hartford, Connecticut; Jacksonville, Florida; Little Rock, Arkansas; Miami, Florida; Mobile and Montgomery, Alabama; Nashville, Tennessee; New Haven, Connecticut; Norfolk, Virginia; Oklahoma City, Oklahoma; Pasadena, California; Phoenix, Arizona; Providence, Rhode Island; Richmond, Virginia; Sacramento, California; Savannah, Georgia; Shreveport, Louisiana; Springfield, Massachusetts; Tacoma, Washington; Worcester, Massachusetts; and Yonkers, New York. 50,000 to 100,000: Alameda, California; Albuquerque, New Mexico; Amarillo, Texas; Burbank, California; Charleston, South Carolina; Cranston, Rhode Island; Dearborn, Michigan; Fresno and Glendale, California; Hamilton, Ohio; Jackson, Michigan; Lincoln, Nebraska; Lubbock, Texas; Madison, Wisconsin; Medford, Massachusetts; New Britain, Connecticut; New Rochelle and Niagara Falls, New York; Pittsfield, Massachusetts; Pontiac, Michigan; Port Arthur, Texas; Portland, Maine; Quincy, Massachusetts; Richmond, California; Roanoke, Virginia; Rockford, Illinois; Saginaw, Michigan; San Angelo, Texas; San Jose and Santa Monica. California; Stamford, Connecticut; Stockton, California; Terre Haute, Indiana; and Winston-Salem, North Carolina. 25,000 to 50,000: Abilene, Texas; Alexandria, Louisiana; Arlington, Massachusetts; Battle Creek, Michigan; Bessemer, Alabama; Bremerton, Washington; Eau Claire, Wisconsin; Fort Lauderdale, Florida; Hagerstown, Maryland; Hamtramck and Highland Park, Michigan; Lakeland, Florida; Lockport, New York; Miami Beach, Florida; Muskegon, Michigan; Palo Alto, California; Tucson, Arizona; and West Allis, Wisconsin; 10,000 to 25,000: Azusa and Chula Vista, California; Clearwater, Florida; Grosse Pointe Park, Michigan; Homewood, Alabama; Laconia, New York; Long Beach, New York; Rennselaer, New York; River Rouge, Michigan; San Gabriel, California; Sanford, Florida; Watertown, South Dakota; and Whittier, California.

Data in Table 5 while not strictly comparable to data reported in the 1951 Year Book indicate that no radical change took place during 1951 in city hall work schedules. Of the 358 cities with a work week of 44 hours or more, 314 have a 44 hour week. Thirty-four cities reported a reduction in work week for city hall employees during 1951. Hours of work for policemen and firemen are reported in the police and fire sections of the Year Book.

Saturday Working Schedules. Table 6 shows the pattern of Saturday work for city hall administrative and clerical employees. In one-half of the cities reporting a full staff works a half-day on Saturday. This compares with nearly 60 per cent of the cities working Saturday mornings in 1951. The most significant change in Saturday work schedules appears in the 10,000-25,000 population group where 19 per cent of the cities report no Saturday work compared with 12.5 per cent reporting no Saturday work in 1951. Cities in this population group are switching to the skeleton staff plan on Saturdays. Last year only 18 per cent of the cities under 25,000 worked skeleton staff on Saturday. This year over 21 per cent use this plan. Only five cities over 500,000 now work on Saturday. This compares with 13 cities which reported that they worked full or skeleton staffs on Saturday in 1951. Only 13 cities (all under 50,000 population) reported that they work a full staff all day on Saturday.

Over-time Pay. Table 7 compares the methods of over-time payment in

TABLE 7

METHODS OF PAYING FOR OVERTIME

Population Group	No. of Cities Reporting	Cities With Some Plan		Compensatory Time Off	Straight Time	Time and One-Half	Double Time	One and one-half and Double [1]	No Plan For Paying Overtime

				B. SKILLED WORKERS ON SALARY BASIS						
Cities over 500,000	16	16	100	0	4	4	0	8	0	0
250,000 to 500,000	22	20	91	5	7	8	0	0	2	9
100,000 to 250,000	60	57	95	1	21	28	0	7	3	5
50,000 to 100,000	115	106	91	12	35	39	0	20	9	9
25,000 to 50,000	233	226	97	15	105	67	2	37	7	3
10,000 to 25,000	638	588	92	70	311	144	4	59	50	8
All cities over 10,000 . . .	1,084	1,013	93	103	483	290	6	131	71	7

[1] Cities in this column pay time and one-half on week days and double time on Sundays and holidays.

cities and contrasts the practice for administrative and clerical workers with that for skilled, non-office workers. Fifty-two per cent of the cities over 10,000 population have some plan for paying over-time for office workers, while 93 per cent have some plan for skilled nonoffice workers. Over half of the cities under 25,000 population have no plan for paying over-time for administrative and clerical workers. This contrasts with only 8 per cent in the same population group with no plan for payment of overtime for skilled workers. Approximately 52 per cent of the cities that report some plan for paying over-time for administrative and clerical employees compensate by giving time off, and an additional 35 per cent pay straight time for over-time.

Of the 1,013 cities reporting that they have some plan for paying skilled workers over-time, 48 per cent pay straight time while 29 per cent pay time and one-half. This year only 7 per cent of the cities reported that they have no plan for paying over-time to skilled workers, while 24 per cent of the cities reporting to the 1951 Municipal Year Book had no plan for paying over-time to skilled workers. The largest percentage of increase for skilled, non-office workers has been in straight time pay and time and one-half pay.

TABLE 8

PERSONNEL ACTIVITIES IN CITIES OVER 10,000

Population Group	No. of Cities in Group	Number of Cities with: Position Classif. Plans	Pay Plans	Entrance Exams	Promotional Exams	Vac. and Sick Leave Rules
Cities over 500,000	18	16	16	17	16	16
250,000 to 500,000	23	21	18	20	19	20
100,000 to 250,000	65	41	46	48	46	50
50,000 to 100,000	128	57	69	57	58	87
25,000 to 50,000	275	109	141	109	95	161
10,000 to 25,000	837	196	325	164	139	386
All cities over 10,000	1,346	440	615	415	373	720

Paid Vacation and Sick Leave. All but five of the 1,192 reporting cities grant vacations with pay to city hall administrative and clerical employees. Nearly 93 per cent (1,105) grant two weeks per year, and an additional 48 cities grant three weeks. Thirty-four cities allow a single week, but 11 of these 34 cities increase the vacation allowance to two weeks after five years service.

Vacation allowances for individual cities are shown in Table VIII. Footnotes 1 to 7 of Table VIII indicate the 161 cities which authorize extra vacation allowances based on length of service. Eighteen cities reported an extra week of vacation after five years service, 25 after 10 years, 70 after 15 years, 41 after 20 years, and five after 25 years. Two cities allow four weeks after 20 years service.

Two weeks with pay is the usual sick leave allowance in cities over

10,000. Of the 993 cities reporting in Table VIII, 780 grant sick leave with 517 of the 780 cities granting 12 to 15 days per year; 182 have no definite policies but report that employees generally are given time off without loss of pay; and 31 cities do not allow sick leave with pay. Sick leave usually can be accumulated over a period of years to provide a form of insurance against extended illness. The average (median) accumulation allowed is 90 days in cities over 100,000, 60 days in cities of 25,000 to 100,000, and 30 days in cities of 10,000 to 25,000.

Personnel Activities. Information was obtained for the Year Book on certain personnel activities of cities over 10,000: specifically, position-classification plans, pay plans, use of entrance and promotional examinations, and vacation and sick leave rules. About 80 per cent of the 1,346 cities over 10,000 reported, and the number of cities carrying on each of these activities is shown in Table 8. A total of 440 cities reported having position-classification plans and 615 cities having pay plans.

Table 8 shows 415 cities that use entrance examinations for all or most positions, but an additional 111 cities have such examinations for police and fire jobs only. A total of 720 cities have formal written rules governing employee vacation and sick leave, while an additional 49 cities have rules governing vacation only. All of the activities summarized in Table 8 are more prevalent in cities over 100,000.

TABLE 9

HOSPITAL AND SURGICAL INSURANCE IN CITIES OVER 10,000

Population Group	No. of Cities in Group	No. of Cities Reporting	Hosp. and Surgical Insurance	Hospital Insurance	Surgical Insurance	No Plan
Cities over 500,000	18	15	11	0	0	4
250,000 to 500,000	23	24	10	0	0	14
100,000 to 250,000	65	52	28	5	0	19

10,000 to 25,000	837	519	319	31	5	164
All cities over 10,000	1,346	934	567	51	7	309

Employee Benefits. Information has been obtained for this Year Book on the cities that make some form of hospital and surgical insurance available to their employees. The individual city data in Table VIII are summarized in Table 9 and show that two-thirds of the cities have made these forms of insurance available under city sponsorship. In addition to hospital and surgical insurance, 65 cities reported other forms of insurance available for city employees—group life insurance in 43 cities, health and accident insurance in 12 cities, and life and health and accident insurance in 10 cities.

Ninety-one of the 567 cities that provide hospital and surgical insurance pay all or part of the insurance premiums. Eighteen of the 91 cities pay all of the premiums and an additional 44 cities pay one-half or more.[2]

---

[2] Cities contributing to hospital and surgical insurance premiums and the proportion of premium paid by each city are as follows: 100 per cent—Anniston, Opelika, and Sheffield,

Information on city employee credit unions has been obtained for the first time since the 1942 Year Book and was supplied by the Credit Union National Organization. Credit unions are cooperative organizations set up under state or federal statutes to encourage personal savings and to provide small loans at favorable interest rates. They are controlled entirely by the membership, although they may be sponsored by the city government. Only members can make deposits for savings or take out loans.

A total of 227 cities have either state- or federally-chartered credit unions open to all employees; 24 additional cities have credit unions for fire and police employees only.

Retirement Systems. Table 10 shows the cities over 10,000 population providing old-age insurance for their employees. A total of 1,207 of the 1,273 cities reporting have retirement or pension plans for some of their employees, and 1,023 (85 per cent) cover all employees. Over one-half of the cities (654) are members of state-administered retirement systems which are set up on actuarial basis to provide the broad membership base essential to solvency which small cities can not provide by themselves.

By February, 1952, 34 states had completed agreements with the Federal Security Administration for coverage of their state and local employees under Old Age and Survivors Insurance.[3] Table 10 shows that as of January 1, 1952, 179 cities in these states had adopted federal social security coverage for their employees. According to the amendment authorizing coverage of municipal employees by federal social security only employees not previously covered by existing retirement plans are eligible.

Alabama; Daly City, California; Fort Collins, Colorado; Orlando, Florida; Independence and Mexico, Missouri; Haddonfield and Hawthorne, New Jersey; Franklin, Monessen, and Reading, Pennsylvania; Murfreesboro, Tennessee; Pampa and Port Arthur, Texas; Provo, Utah; and Racine, Wisconsin. 70 per cent—Bay City, Michigan and Beaver Falls, Pennsylvania. 67 per cent—Daytona Beach, Florida and Rome, Georgia. 51 to 66 per cent—Moscow, Idaho; Hazel Park and Midland, Michigan;, Grand Forks, North Dakota; Harrison township and Williamsport, Pennsylvania; Memphis, Tennessee; and Salt Lake City, Utah. 50 per cent—El Dorado, Arkansas; Chula Vista, Fullerton, Hanford, Madera, San Carlos, and Visalia, California; La Grange, Georgia; Coeur d'Alene and Pocatello, Idaho; Crowley, Houma, and West Monroe, Louisiana; St. Joseph, Michigan; Carthage, Missouri; New York City and Yonkers, New York; Ponca City, Oklahoma; Arnold and Ellwood City, Pennsylvania; Greenwood, South Carolina; Rapid City, South Dakota; Elizabethton, Tennessee; Denison, Gainesville, and Garland, Texas; Salt Lake City, Utah; Martinsville and Staunton, Virginia; and Menasha, Neenah, and South Milwaukee, Wisconsin. 40 per cent—Florence, Alabama; Tulare, California; Reidsville, North Carolina; Anderson, South Carolina; and Two Rivers, Wisconsin. 26 to 39 per cent—El Cerrito and National City, California; Albany and Athens, Georgia; Idaho Falls, Idaho; Paducah, Kentucky; Annapolis, Maryland; Hamtramck and Roseville, Michigan; Plainview, Texas; and Brattleboro town, Vermont. 25 per cent or less—Fairfield and Homewood, Alabama; Fort Pierce and Lakeland, Florida; Atlanta, Georgia; Birmingham and Jackson, Michigan; Carlsbad, New Mexico; New Bern, North Carolina; Warren, Pennsylvania; Charleston, South Carolina; Abilene, Texas; and Wisconsin Rapids, Wisconsin.

[3] States having agreements with the Federal Security Administrator for coverage of state and local employees under old-age and survivors insurance as of February, 1952: Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Idaho, Indiana, Kansas, Kentucky, Maine, Maryland, Massachusetts, Michigan, Missouri, Nebraska, New Hampshire, North Carolina, Oklahoma, Oregon, Rhode Island, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, and Wyoming.

The increase of 10 per cent in plans covering all employees is attributable to the adoption of federal social security. Three states (Virginia, Wyoming, Utah) abandoned their state-administered retirement systems and adopted enabling legislation permitting the state to enter into an agreement with the Federal Security Administrator for coverage of state and local employees. Virginia later re-enacted its state retirement system to make cities eligible for both systems. All the cities of Virginia are shown in the individual city table as of December 31, 1951, with the exception of Harrisonburg which reported that all employees were covered by federal social security.

TABLE 10

RETIREMENT SYSTEMS FOR CITY EMPLOYEES

Population Group	No. of Cities Reporting	Cities Having Some Classes Covered		Classes of Employees Covered					Participation in State System	Participating in Fed. Soc. Sec.
		No.	Per Cent	All[1]	Fire and Police	Fire	Police	Other Combinations[1]		
Cities over 500,000 . .	18	18	100.0	18	0	0	0	0	3	1
250,000 to 500,000 . . .	23	23	100.0	22	1	0	0	0	11	1
100,000 to 250,000 . . .	65	65	100.0	60	4	0	0	1	26	3
50,000 to 100,000	127	127	100.0	115	10	1	1	0	68	10
25,000 to 50,000	270	265	98.0	232	20	1	8	4	141	33
All cities over 25,000 .	503	498	99.0	447	35	2	9	5	249	48
10,000 to 25,000	770	709	92.0	576	59	16	48	10	405	131
All cities over 10,000 .	1,273	1,207	95.0	1,023	94	18	57	15	654	179

[1] All includes "All" and combinations of "FG, GP or FGP" in Table VIII but usually excludes day laborers, elected officers and temporary employees. Other combinations include various combinations of fire, police, general government employees, and public utility employees.

The 1951 Municipal Year Book (pp. 124-29) gives the latest compilation of state retirement systems covering municipal employees. At the end of 1950, 31 states had provided for central systems, but three of these, in Florida, Nevada, and Pennsylvania, are not yet in operation. Cities in a few states may have both state and local plans for the same group of employees. For these cities, the code letters in Table VIII reflect only the state-administered plan.

Employee Organizations. Data on affiliated employee organizations were gathered from national organizations of public employees and are shown on Table VIII as of January 1, 1952. Data on unaffiliated organizations were obtained directly from city officials. In many cities skilled trade workers belong to craft unions which are not included in this discussion. The data are summarized in Table 11 for all cities over 10,000.

One or more employee organizations is found in each of the 18 cities over 500,000 population, and all but 12 of the cities over 50,000. Nearly 62 per cent of the cities between 10,000 and 50,000 have one or more organizations for local employees. Data presented in Table 11 can not be used to determine the number of locals in any one union, since the national organizations can have several locals in one city composed of employees in various departments. The AFSCME at the end of 1951 had locals in 60 cities composed entirely of police officers.[4]

The federations of municipal employee organizations are the International Association of Fire Fighters, and The American Federation of State, County, and Municipal Employees (both affiliated with the AFL); the Government and Civic Employees Organizing Committee (affiliated with the CIO), and the United Public Workers of America (independent).

TABLE 11

ORGANIZATIONS OF LOCAL EMPLOYEES IN CITIES OVER 10,000

Population Group	No. of Cities in Group	Cities With Employees in One or More Organizations		No. Cities Having Employees in Affiliated Organizations[1]				No. of Cities With Nonaffil. Org'ns
		No.	Per Cent	AFSCME	GCEOC	IAFF	UPW	
Cities over 500,000	18	18	100.0	16	14	18	12	13
250,000 to 500,000	23	20	87.1	15	9	19	7	10
100,000 to 250,000	65	64	98.5	43	13	54	11	29
50,000 to 100,000	128	120	93.8	63	17	109	17	46
25,000 to 50,000.	275	222	80.8	103	21	177	23	73
10,000 to 25,000.	837	466	55.7	98	22	238	20	120
All cities over 10,000	1,346	910	67.6	339	96	615	90	291

[1] The total number of cities with employees in the several affiliated organizations exceeds the total number of cities having one or more organizations because there are many cities having employees in two or more organizations. AFSCME indicates American Federation of State, County, and Municipal Employees (AFL); GCEOC, Government and Civic Employees Organizing Committee (CIO); IAFF, International Association of Fire Fighters (AFL); UPW, United Public Workers of America (independent).

Locals of the IAFF were established in 13 cities during 1951 and were abandoned in 10 cities. The AFSCME organized locals in 18 cities in 1951 where locals had not been previously reported. The GCEOC organized locals in 41 cities during 1951 and reported no abandonments. The UPW reported the abandonment of two locals during the year. Cities added to the 1952 Municipal Year Book account for other changes in the total number of unions; some of these places were organized prior to 1951.

---

[4] Cities in which the AFSCME has locals composed exclusively of police officers: Tuscaloosa and Mobile, Alabama; Hot Springs, Little Rock, North Little Rock, and Pine Bluff, Arkansas; Denver and Pueblo, Colorado; Bridgeport, Hartford, Middletown, New Britain, New Haven, and West Haven, Connecticut; Augusta, Georgia; Aurora, East St. Louis, Joliet, Kankakee, La Salle, Ottawa, Springfield, and Streator, Illinois; Keokuk, Iowa; Hutchinson, Kansas; Alexandria, Bogalusa, Monroe and Shreveport, Louisiana; Baltimore, Maryland; Duluth and St. Paul, Minnesota; Meridian, Mississippi; Hastings and Omaha. Nebraska; Irvington, New Jersey; Niagara Falls, New York; Asheville and Durham, North Carolina; Massillon and Youngstown, Ohio; Portland and Salem, Oregon; Columbia, South Carolina; Chattanooga, Tennessee; Portsmouth, Virginia; Aberdeen, Bremerton, Hoquiam, Pasco, Port Angeles, Puyallup, Renton, Spokane, Tacoma, Vancouver, and Yakima, Washington; LaCrosse and Madison, Wisconsin; and Sheridan, Wyoming.

TABLE VIII

PERSONNEL DATA FOR CITIES OVER 10,000: 1952

This table includes all cities over 25,000 population and 1,295 of the 1,346 cities over 10,000 according to the 1950 census. City employment and payroll data are for October, 1951, and were obtained from an unpublished tabulation of the Bureau of the Census. Data on state-administered retirement systems were obtained from state officials, and on locals of national organizations of governmental employees from the headquarters of those organizations. All other data were obtained direct from city officials. "Number of Employees" includes both general government functions and city government enterprises. An asterisk (*) after the name of a city indicates employment and payroll data are for July, 1951; a double dagger (‡) for April, 1951; and a section mark (§) for January, 1951. Explanation of all code letters is shown below. Under **PERSONNEL MANAGEMENT**, the first column shows the kind of formal civil service organization (if any); cities with two or more civil service boards are shown in footnote 8. The second column shows the employee groups under formal civil service; code letter "G" means all employees except fire and/or police, and "O" means health, library, utilities, or other limited groups of employees. In the third column the letter to the left of the dash (-) shows the person serving as chief personnel officer; the letter to the right shows employee groups served by the personnel officer. "Work Hours per Week; Saturdays" applies only to administrative and clerical employees. Under "Overtime Pay—Office, Skilled", the first letter refers to administrative and clerical employees, the second to skilled non-office workers. When two or more methods of over-time pay were reported, the most liberal plan is shown. The next two columns show annual vacation and sick leave allowances granted administrative and clerical employees. The second figure under sick leave shows the maximum number of days that can be accumulated; zero (0) shows that no sick leave with pay is granted, and an "N" indicates city has no set policies on sick leave. "Vacation and Sick Leave Rules" shows whether city has formal written policies governing vacation and sick leave. "Hospital and Surgical Insurance" shows the kinds of insurance available to city employees under city sponsorship. "Credit Union" is shown when organized specifically for city employees; code letters indicate employee groups eligible for membership. Under "Retirement Systems", letters to the left of the dash (-) show city pension plans, those to the right state-administered plans; a single dagger (†) indicates city has come under federal social security. The last column shows locals of national labor organizations of governmental employees as well as local unaffiliated organizations. Leaders (. . .) denote information not reported; superior numerals (^{1}) refer to notes at end of table.

CIVIL SERVICE SYSTEM

B—Formal civil service board
County—County provides personnel services
State—State provides personnel services
None—No civil service board

OFFICIAL SERVING AS CHIEF PERSONNEL OFFICER

C—Council or council committee
D—Individual department heads
K—City Clerk
P—Full-time personnel officer appointed by City Manager (PA); Civil Service Commission (PB); City Council (PC); Mayor (PM); Other Official (PX)
S—Other official
X—Several officials

OVERTIME PAY POLICY

D—Double time on Sundays and holidays
H—Time and one-half
N—No plan for paying overtime
S—Straight time
T—Compensatory time off
X—Time and one-half week days, double time Sundays and holidays

EMPLOYEE ORGANIZATIONS

A—American Federation of State, County, and Municipal Employees (AFL)
F—International Association of Fire Fighters (AFL)
G—Government and Civic Employees Organizing Committee (CIO)
N—None
S—United Public Workers of America
U—Local unaffiliated organization

EMPLOYEES SERVED BY CIVIL SERVICE SYSTEM, RETIREMENT SYSTEM, CREDIT UNION, AND CHIEF PERSONNEL OFFICER (lower case letters)

A—All
F—Fire
P—Police
N—None
O—Others, but limited
G—All except those covered by separate systems.

APPOINTING AUTHORITY FOR CIVIL SERVICE BOARD

A—City manager
C—City Council
E—Elected
G—Governor
M—Mayor
X—Several officials and/or other citizens

HOSPITAL AND SURGICAL INSURANCE

Y—Both
H—Hospitalization only
S—Surgical only
N—None

VACATION AND SICK LEAVE RULES

Y—Rules for both
V—Vacation rules only
N—None

SATURDAY SCHEDULE

S—Skeleton staff all day
Sh—Skeleton staff half day
F—Full staff all day
Fh—Full staff half day
N—No Saturday work

[1] Two weeks vacation after five years service.

[2] Three weeks vacation after five years service.

[3] Three weeks vacation after ten years service.

[4] Three weeks vacation after fifteen years service.

[5] Three weeks vacation after twenty years service.

[6] Three weeks vacation after twenty-five years service.

[7] Four weeks vacation after twenty years service.

[8] City has two or more civil service or merit system boards. The composition of the board with broadest coverage is shown in the first column under PERSONNEL MANAGEMENT. Code letters in the second column indicate those employees covered by all of the civil service boards.

[9] Civilian employees of the District of Columbia are under the jurisdiction of the United States Civil Service Commission for all personnel matters.

[10] Civil service board is advisory only.

[11] Overtime paid at fixed hourly rate not related to base pay.

[12] Overtime for labor and trades workers paid at 10 per cent above base pay.

[13] Overtime paid at double time.

[14] Overtime paid at time and one-quarter.

[15] City council acts as civil service commission.

[16] Information for part-time payrolls not included.

[17] Information for part-time employees and payrolls not included.

Municipal Finance

Summary of 1951 developments in:
ADMINISTRATION ASSESSMENT PURCHASING

Finance Administration

By Joseph F Clark

Executive Director, Municipal Finance Officers Association, Chicago

MUNICIPALITIES in 1951, probably more than ever before, were subjected to pressures that reached at their fiscal foundations. The year might well be termed the municipalities and the legislatures in action.

At the federal level attempts to extend federal income taxes to interest on municipal bonds and to extend the federal electrical energy tax to municipally owned electric utilities were defeated, thus preserving the traditional municipal exemption from federal taxation. One bone of contention was removed; that relating to the application of federal admission taxes to municipally owned swimming pools and other physical exercise facilities.

Action taken by state legislatures was for the most part aimed at removing the revenue straight-jacket under which many cities were operating. At least 14 states adopted acts granting municipalities authority to levy additional taxes or increasing shares of state taxes. Thirty-two states adopted property tax legislation with many increasing tax limits or otherwise amending existing legislation so as to permit municipalities to obtain more revenue from this tax source. Nineteen states amended or adopted legislation affecting municipal debt.

Increasing defense efforts and the effects of inflation had their influence on municipalities in much the same way that they were affecting businesses and individuals. Salaries were being increased and the cost of materials and supplies purchased also was going up with the result that new records were established both in budgets adopted for 1952 and in total expenditures for 1951. Continued efforts to catch up with long-delayed capital improvements added both to record expenditures and record debt, since most of the facilities were financed with borrowed funds.

Municipal debt was brought into the Voluntary Credit Restraint Program, and the federal materials control plan also was extended to municipalities. Both of these had their effects on the municipal bond market but did not materially curtail bond sales, which reached an estimated 3.2 billion dollars, being exceeded only by the record sales of 3.7 billion dollars reached in 1950.

Efforts to stretch revenue dollars to cover mounting expenditures emphasized the value of a good accounting system as an essential management tool. As a result an increasing number of municipalities revamped their accounting systems and revised their financial administrative organizations.

Revenues. The need for additional municipal revenue continued unchallenged as the number one municipal financial problem, and was receiving more and more attention by the states. Illinois, Indiana, South Carolina, Texas, and Vermont appointed commissions to study tax and revenue problems. While some of these, such as that for Vermont, were primarily concerned with state taxation, municipal problems also will be studied.

Other states took more direct action. The tendency noted in the past five years for states to give municipalities an opportunity to choose their own revenue sources continued through 1951. California permitted its municipalities to impose a use tax on liquor sales. Tennessee authorized a 10 per cent beer tax. West Virginia allowed cities to impose the following taxes; capitation, motor vehicle license taxes, licenses and privilege taxes, and taxes on domestic animals. Washington granted authority to its counties to levy a 1 per cent tax on real estate sales, proceeds of which must be allocated to local school districts. New York City was given legislative permission to increase its sales tax from 2 to 3 per cent, which it did, and was given permanent authority to impose sales taxes on hotels, clubs, and rooming houses. Smaller cities in New York obtained legislation to levy utility taxes previously limited to the larger cities. Montana permitted imposition of a 2 per cent tax on punch boards. New Mexico authorized a local one-cent per pack cigarette tax for recreational purposes.

A number of states extended or increased municipal licensing powers: cities in Illinois may tax amusement and vending machines; Minnesota municipalities can license elevator operators, cigarette dealers, and mechanical amusement devices; South Dakota municipalities may retain liquor license fees which formerly went to the state; Texas doubled the license rate on juke boxes. The Missouri House passed a bill which would again permit St. Louis to impose an income tax; favorable action by the Senate is anticipated. It is reported that the city has agreed to exempt the first $400 or $500 of income from the proposed 1 per cent earnings tax.

Several states permitted or extended the authority of some or all of the municipalities in the state to use sewer service charges. Among the states passing such legislation were Minnesota, Missouri, Nebraska, New York, and West Virginia. North Dakota now permits the imposition of garbage and refuse collection charges.

North Dakota joined the ranks and became the 48th state to use the state-administered locally shared tax device. That state added one cent per pack to its cigarette tax, the proceeds to be distributed to the municipalities in North Dakota. Wyoming imposed a two-cent per pack cigarette tax, proceeds of which will be rebated to all of the local governmental units in the state less a 2 per cent cost-of-administration charge. Nebraska imposed a new tax on insurance companies which it shares 50-50 with its municipalities. Oregon allocated a part of the state liquor revenue to its municipalities, and Kansas increased the cities' share of the state motor fuel vehicle tax. Increases in state gasoline taxes of Illinois and Wyoming should result in larger revenues being received by cities in those states. Municipal surplus funds may now be invested by Utah cities in federal government securities.

The property tax came into consideration in at least 32 states that adopted 50 property tax laws. Maine dropped the state property tax thus leaving this field exclusively to local governments. Tax limits were adjusted by 13 states; a number of them placed "electorate" limitations where limits were upped. North Carolina, however, adopted legislation to submit a constitutional amendment at the next general election which would impose a 20-cent per $100 valuation tax limit for the state and county, except when the county levy was for "special purposes" or for the maintenance of schools; the maximum state levy would be limited to five cents. Connecticut reached the conclusion that personal property taxation was too difficult to administer and consequently exempted such forms of personal property as household furniture, private libraries and books, TV and radio sets, watches, jewelry, and similar items from property taxation.

Washington placed some restrictions on municipal admission taxes, limiting them to one cent on each 20 cents or fraction thereof. A ruling of the California Supreme Court clearly opened up admission taxes as a source of revenue for municipalities.

In view of new and existing permissive tax legislation and the present general high cost of government, it is not surprising that some municipalities have adopted new taxes or have increased old ones. Boulder and Newcastle, Colorado, have adopted two-cent per pack cigarette taxes. Baltimore, Maryland, increased its cigarette tax from one cent to two cents per pack. Two per cent sales taxes were adopted by Syracuse and Niagara Falls, New York; one-half of 1 per cent sales taxes were adopted by Guadaloupe, Holtville, India, Livermore, Los Banos, Ojai, and Pomona, California. Oakland, Arcata and Madera, California, increased their sales taxes from one-half of 1 per cent to 1 per cent. Elmira, New York adopted a 5 per cent tax on admissions, a 5 per cent hotel and room occupancy tax, and a 3 per cent utility tax. Brewton, Alabama, taxed beer at one-cent per bottle or can, while at least 50 cities and 34 counties in Tennessee have imposed beer taxes up to the permissive 10 per cent levy.

Saginaw, Michigan, adopted a 1 per cent tax on income and net business profits. The tax was to have been effective January 1, 1952, but a state circuit court ruling declared the tax unconstitutional; the decision is being appealed to the Michigan Supreme Court. Income taxes also ran into court difficulties in Ohio where that state's court of appeals voided the Youngstown 1 per cent tax on net business income. The city previously imposed a three-tenths of 1 per cent tax which applied equally to individuals and businesses. The court of appeals also voided the Campbell, Ohio, tax on net profits; the city did not tax individuals.

A license tax imposed by Bellingham, Washington, has some of the attributes of a typical municipal income tax. That city placed its license fees on a gross receipts basis, but the tax also applies to the gross earnings of employees. If the gross earnings of an individual are more than $400 in a two-month period or more than $600 in a three-month period, one-tenth of 1 per cent is withheld from his salary. A constitutionality suit has been filed by a labor union against the Bellingham tax. A gross receipts tax imposed by Waynesburg, Pennsylvania, also appears to be unusual in that it places a 1-1/2-mill tax on all of those "offering services of any kind." Apparently only Altoona, Pennsylvania, has a similar tax, which also appears to be a form of income tax.

In some instances, voters apparently are not adverse to increasing taxes. Voters of Lincoln, Nebraska, approved a home-rule charter amendment which abolished the "dollar ceiling" on taxes and increased the mill limitation about 20 per cent. Previously the city had been under a double limitation: one expressed in dollar amounts and another in the more typical millage limit form.

Municipal Debt. Municipal bond sales in 1951 again exceeded the three billion dollar mark, reaching a total of $3,270,106,493 according to the Bond Buyer. Total bond sales in 1950 were $3,693,604,165. Despite the fact that bond authorizations were frequently rejected by the voters, total bonds approved by the electorate at general and special elections reached the sum of $2,249,602,000 in 1951 according to the Bond Buyer. This is greater than any amount approved in the past 10 years, exceeding the $2,217,294,000 approved in 1949, the only other year in the past decade in which more than two billion dollars in state and municipal bonds were approved.

Bond sales continued at such a high pace that a new record for outstanding debt was again established. According to the Bureau of the Census total outstanding debt of state and local governments reached $ 27,100,000,000 as of June 30, 1951, an increase of almost $ 2,900,000,000 over the previous 12-month period. As in 1950 every level of local government contributed to this increase in outstanding debt.

Interest rates for municipal bonds fluctuated more in 1951 than for any previous period. Early in the year municipals enjoyed such a good market that the Bond Buyer's Index of the yield of 20 municipal bonds reached a low of 1.58 per cent in February. By mid-year the picture had completely changed. The federal government abandoned its peg on government bonds, adopting the policy of permitting them to reach their own level on the market. This action affected the entire bond market, corporate, federal government, and municipal.

The municipal market was also affected when municipal bonds were brought under the National Voluntary Credit Restraint Program. As a result, the Bond Buyer's Index reached a high of 2.23 per cent as of June 21. From that point the market for municipals improved with the index going below 2 per cent in September and reaching 2.10 per cent as of December 27. The rise in the index for December reflected to some extent, the action of some of the large banks in raising the rate for prime commercial paper from 2-3/4 per cent to 3 per cent.

During the year at least two states, Maine and Wisconsin, took steps to increase the debt limits of municipalities. A constitutional amendment was approved in Wisconsin permitting cities to issue bonds for school purposes up to 8 per cent of assessed valuation instead of 5 per cent. However, Maine voters refused to approve increasing debt limits of all cities from 5 per cent to 7-1/2 per cent. They did approve, however, a constitutional amendment exempting rentals paid the Maine School Building Authority from municipal debt limitations.

Revenue bonds continued to be used extensively by municipalities, accounting for about 20 per cent of all municipal bond sales. This trend is apt to continue since a number of states took legislative action to extend authority to use revenue bonds for purposes not previously sanctioned. Use of revenue bonds for sewage plants and facilities were authorized in Florida, Illinois, Kansas, and Pennsylvania. They may now be issued for airports in Indiana, auditoriums in South Dakota, toll bridges in Illinois, gas plants in Texas, and for industrial plants in Illinois and Tennessee. Use of municipal revenue bonds for industrial plants is somewhat unusual, although Mississippi for some time has permitted municipalities to use them to construct industrial plants which are subsequently leased to private industry. Other states in which this is permitted are Kentucky and Alabama.

According to the Bond Buyer over $ 730,000,000 in revenue bonds were sold in 1951, the largest amount ever sold in any one of the past 10 years. Revenue bonds are almost the exclusive method of financing used by special state and local authorities, but their use has not been limited solely to special authorities. For the two-year period, 1951 and 1952, 205 cities over 10,000 population sold $ 287,084,875 revenue bonds, or 21.6 per cent of all revenue bonds reported as being sold during that period by the Bond Buyer. This information was obtained in a special survey made early in 1952 by the International City Managers' Association. The principal and interest of such bonds are paid solely from earnings by the facility financed by the bond proceeds.

In order of the volume of sales, the most frequent purposes for which revenue bonds were sold during the past two years were water, electric, sewer, parking, and airport facilities. Considered from the standpoint of the number of cities selling revenue bonds these same five purposes led the field with a slight change in the order: water, sewer, parking, electric and airport facilities. Of these purposes only the issuance of revenue bonds for parking facilities is relatively new, indicating the importance that parking is assuming in the municipal field. All of the other purposes have been traditionally financed by revenue bonds. Probably the most significant feature disclosed by the ICMA survey was the varied and new functions financed by revenue bonds. Among the facilities being reported as financed in this manner by cities over 10,000 population are the following: veterans' housing, public market, 36-hole golf course, municipal auditorium, flood lights for a baseball park, bridge, dormitory, hospital, bus terminal, gas distribution lines, and schools.

The federal 1951 Revenue Act, in addition to increasing taxes, may also have widened the market for municipal bonds. Net earnings of savings banks, cooperative banks, and savings and loan associations are now subject to the regular federal corporate income tax. These institutions have not been in the municipal bond market in recent years.

That credit controls are essential in combatting inflationary pressures in the national economy was recognized by the executive board of the Municipal Finance Officers Association. In November, 1951 it adopted a resolution subscribing to the principles designed to curb borrowing by governmental units for purposes that are nonessential, postponable, or inflationary in character; also recommending that public expenditures be curbed in order to contribute a factor in combatting an inflationary trend that is excessive and undesirable. That cities are cooperating is reflected in the few issues not approved by the National Voluntary Credit Restraint Committee; most municipalities are voluntarily witholding marketing of obligations of the kind mentioned above.

Administration. Not content with a "status quo" attitude, many municipalities paid close attention to fiscal administrative changes that would improve management. Among the changes made were complete reorganizations of the finance department. Columbia, South Carolina, completely integrated all budgetary and financial activities into a department of finance. Ogden, Utah, adopted a council-manager form of government and in so doing created a centralized finance department. Long Beach, California, placed the offices of assessor, tax collector, purchasing, treasurer, and accounting into a centralized finance department. Less extensive reorganizations of the finance department were made by Schenectady, New York, and by Stockton, California, where sales tax and license departments were coordinated.

Montgomery County, Maryland, established a financial advisory committee consisting of investment and commercial bankers, lawyers, and fiscal experts to study and consult with the council on budgeting, capital project priorities, debt structure, and other financial and fiscal matters.

Accounting. Municipal and governmental accounting, auditing, and reporting were very much in the forefront during 1951, with a large number of municipalities making complete revisions of their accounting systems. For example, Eau Claire, Wisconsin, installed a completely new system. Bangor, Maine, improved its accounting system, including encumbrance, fixed asset, and payroll accounting. Wayzata, Minnesota, installed an improved system for its liquor dispensary. Many cities, in making general improvements, mechanized their systems. Among the cities using machine accounting were Abilene, Texas; Columbia, South Carolina; Dartmouth, Nova Scota; Kerrville, Texas; Plattsburg, New York; Pomona, California; Richmond, Virginia; Wildwood, New Jersey; and Zion, Illinois.

Accounting procedural manuals were prepared by Columbia, South Carolina; Portland, Oregon; and Ogden, Utah. Norfolk, Virginia, revised its budgetary account classification, simplifying it, and assembling the needed information into manual form. Account classifications were revised in Bangor, Maine; Columbia, South Carolina; Port Arthur, Texas; and Wethersfield, Connecticut, with the revisions conforming to recommendations of the National Committee on Governmental Accounting and the Municipal Finance Officers Association. Cost accounting procedures were extended in San Diego, California. Buffalo, New York, has authorized installation of cost accounting in its water department.

Several cities made improvements in their utility billing procedures.

Among those adopting a post-card billing method were Milwaukee, Wisconsin; Gainesville, Florida; and Lubbock, Texas. Greenville, Mississippi, completely changed its utility accounting system and now bills on a cycle basis. A number of cities, including Lodi and Sacramento, California, lengthened the billing period to a bimonthly one in order to reduce costs and to better distribute the work load.

Greenwich, Connecticut; Laconia, New Hampshire; and Patchogue, New York, all changed their fiscal years in order that they might coincide with the budget and tax years. Purpose for making this change, other than simplifying financial reporting and facilitating accounting procedures, is well illustrated by the results obtained by Greenwich. As a result of the change, Greenwich found it unnecessary to borrow in anticipation of taxes, but instead was able to invest a surplus in federal securities.

The year was noteworthy in that the first Doctor of Philosophy degree in governmental accounting was presented by the University of Illinois to Robert M. James, a native of Wisconsin.

Legislatures in two states adopted legislation with reference to municipal audits. Independent audits are now mandatory for school districts in New Jersey. Illinois municipalities under 500,000 population now must have an annual independent audit, except for very small municipalities in which a biennial audit is required.

Indicative of the importance that governmental accounting was assuming for municipalities is the attention being given to annual municipal financial reports. During the year the Association reviewed 28 reports and of these, eight were awarded certificates of conformance for substantially conforming to the standards established by the National Committee on Governmental Accounting and the Municipal Finance Officers Association. This equals the record number of awards granted in 1947. Governmental units receiving the award were: Buffalo Sewer Authority, New York; Territory of Hawaii; Hull, Quebec; Jackson County, Missouri; Prince Albert, Saskatchewan; Richmond, Virginia; San Diego County, California; and San Jose, California. To date the Association has reviewed more than 728 annual financial reports but has awarded only 28 certificates of conformance.

Professional Organization. The Municipal Finance Officers Association of the United States and Canada (1313 East 60 Street, Chicago 37) during 1951 published "Municipal Accounting and Auditing" which was prepared by the National Committee on Governmental Accounting which is sponsored by the Association. A new volume in the nonproperty tax field, "Municipal Nonproperty Taxes," was also published, supplementing "Where Cities Get Their Money." In addition the Association released special bulletins on "Allowances for Use of Private Automobiles on Public Business," and "Withholding Income Tax From Wages." The Association's technical and research inquiry service was extensively used, 340 technical inquiries having been answered during 1951. Also the Association issued a special publication on "Recommended Policies for Public Finance Officers." The 45th annual conference of the Association was held at Dallas, Texas, April 23-26, 1951, with a total attendance exceeding 800; many successful state and provincial meetings were also held during the year.

Assessment Administration

By Albert W. Noonan

Executive Director, National Association of Assessing Officers, Chicago

THE most important developments in 1951 were in further state assistance to local units, in-service training, and increased valuations.

State Assistance to Local Assessors. The most dominant note struck in 1951 in the assessment administration was the growing emphasis on state programs of assistance to local assessment practice. During the past decade more and more state tax agencies seem to have come to the conclusion that this is the best way to discharge some positive assistance to local assessors so that original assessments will be substantially correct. Practically all are now agreed that no amount of subsequent tinkering can remove defects that get into the original assessment.

One of the best programs of state assistance was in Kentucky where state assistance was launched in 1950. Within the department of revenue a special section known as the local assessment section was set up with both a central office and a field staff. Later manuals were prepared and a few pilot revaluation programs undertaken. In 1951 the program was carried on in a solid fashion with at least five counties completely revalued. In a number of others there was some measure of improvement effected. It has been authoritatively estimated that at the end of 1951 no less than 42 per cent of the total taxable real estate had been revalued under the state assistance program.

Another state in the foreground of state assistance programs is Oregon. For several years a splendid program of guidance has been conducted by the assessment and taxation division of the state tax commission. The legislature in 1951 appropriated $687,000 to the state tax commission to extend its work. One of the prime objectives of the new program is a complete reappraisal of all real estate in each county within a 10-year period, coupled with the installation of standardized assessment methods. It is planned that the expense of the project will be shared equally by the county and the state. The assessment and taxation division of the state tax commission is now organizing a staff preparatory to carrying out the program.

Increased interest in supervision and assistance was also evidenced in Maryland where the legislature passed an act which required the state tax commission "to prepare and install in each county and Baltimore City a complete record of properties and system of appraisal bids consisting of property description cards, location maps, land classification maps, unit valuation maps, record of new construction, sales, building costs and appraisals, together with proper indices and cross-indices." The same act requires that this job be completed by January, 1954.

In Idaho the tax commission this past year established uniform standards for assessment work throughout the state and ordered standardized appraisal cards be installed in each county, together with a full system of aerial tax maps and uniform property classification schemes.

It is sometimes urged that local assessors are not fully sympathetic to state assistance programs, but most of the evidence is to the contrary. In 1951, for example, the South Dakota Assessors' Association passed a strongly worded resolution requesting that the state department of taxation equip itself with both real estate and personal property experts, which could be available to assist the local assessor on difficult problems; likewise, that the department of taxation should prepare an assessors' manual.

On the other hand, the program of assistance in the state of Nevada came to an abrupt end when the legislature refused to appropriate any more money to the recently established valuation division of the state tax commission. It was reported that at the time of abolishing the valuation division, standardized assessment methods had been installed in eight of the 14 counties of the state.

The above incidents cover the substantially new developments that took place in 1951. Of course, not to be overlooked is the fact that quite a number of states are carrying forward a continuous program of state aid along the same lines, for example, in California, Colorado, Illinois, Maine, Minnesota, Virginia, and Washington.

Training. Closely allied to the state assistance programs are the in-service training programs for assessing officers. In recent years there has been a decided trend towards having schools for assessing officers held at state universities, and conducted under their auspices, with the cooperation of the state association and state tax agency. Interestingly enough, however, a somewhat contrary trend toward more regional and district meetings appears to be developing. Quite a few people have come to the conclusion that these smaller groups are much more effective as educational aids.

For example, as Kenneth Back of the Kentucky Department of Revenue recently stated, "it is necessary for a state assistance program to follow up the publication of appraisal manuals with an active in-service training program to insure the proper utilization of these valuation materials. Kentucky experience indicates that a series of regional schools for assessing officers is far more effective than state conference methods of instruction.

"The task of taking the schools to regional groupings of assessors rather than have assessors congregate at the state capitol places a far heavier burden on the state capitol personnel who must literally ride out the circuit. It does, however, have two distinct advantages: (1) Instruction of small groups permits the conference material to be geared more closely to individual needs and encourages more active participation on the part of assessors; and (2) by dividing the state into regional conferences, assessors can be brought together for more specialized treatment of the particular valuation problems."

In 1951 two schools primarily devoted to rural assessment problems were held, one the University of Nebraska and another at Iowa State. The Nebraska venture marked the first time that a school for assessors devoted to rural assessments was held at a university. The University of

North Dakota also became part of the picture when it conducted its first school for assessors last May. While these were new ventures, it should be mentioned in passing that there has been no lessening of interest in in-service training work in other states. Schools or institutes held on the campus of the state university were continued in 13 other states, and state-wide schools were held in several additional states.

Legislation. No 1951 legislation seriously changed the organizational pattern in any state. However, some interesting recommendations were recorded which, if carried out, will result in substantial changes. The Association of Oregon Counties, for example, recommended that: (1) county assessors be chosen from panels of qualified persons approved by the state tax commission; (2) that assessing and collection functions be consolidated in the assessor's office; and finally (3) that county assessors be removed as members of the county boards of equalization. Substantially the same recommendations were endorsed by the League of Oregon Cities. Also in Oregon the legislative interim tax study committee recommended that the property tax for state purposes be abandoned, and also that taxes on personal property be repealed and replaced by a business tax measured by net income.

In Minnesota the interim committee on tax research recommended repeal of the property tax for state purposes as well as all property taxes on household furnishings. The North Dakota legislature also passed a resolution requesting the legislative research committee to make a special study of property assessing methods.

What was true of organizational changes was also true of the other legislative subjects. Only a few measures were adopted which need comment. One of these was passed in Arkansas and provided that before a person could obtain his state license plates for his car he must prove that the car had been listed for taxes. It is reported that this measure resulted in a great many automobiles appearing on the assessment roll for the first time. In Oregon the state tax commission was requested by the state legislature to prescribe a base year for use in the computation of construction costs used in the appraisal of buildings. County assessors were then required to compute their costs on the basis of the evidence furnished by the state tax commission. Connecticut passed an act repealing the property tax on household furnishings and by doing so raised to 12 the number of states in which such property is completely exempt. As a result of the famous Helin decision the Michigan legislature adopted an act expressly providing that a sale of land acquired by tax lien foreclosure should not be considered controlling evidence of the true cash value of such property for assessment purposes.

Court Decisions. Perhaps the most interesting decision during the year was the one handed down by the Michigan Supreme Court (Helin v. Grosse Pointe Township, January, 1951). The property at issue in this case was a so-called "luxury" home or mansion located in one of Detroit's swank suburbs. The mansion was originally built for about $300,000 and was acquired by the state of Michigan through tax lien foreclosure. Later it was sold by the state to the complainant for $35,000. It was assessed at $133,000. Both the lower and the supreme courts gave a great deal of weight to the sale by the state and, upon the basis of such evidence, required that the property be reassessed at a lower figure. As mentioned before, the legislature somewhat nullified the possible effects of this decision by passing an act which expressly states that sales by the state of tax delinquent land shall not be controlling evidence of true cash value.

Assessment Level. Some evidence of the effect of inflation is revealed by one of the authoritative indexes of construction costs which showed an index number for frame residence construction in November, 1950, of 232.7 (1926-29 = 100). A year later this number had increased to 245.6. Practically all other indexes or surveys of construction costs gave a similar picture.

Assessed valuations, although moving steadily in an upward direction, are not being increased at anywhere near the rate that is true of most other costs and prices. The annual NAAO survey of assessed valuations of real estate in the larger jurisdictions supports this view. In this survey, a comparison was drawn between the most recent assessment, generally for 1951, and the immediately preceding one, generally for 1950. This showed that the average rise was only 4.4 per cent. Similar comparisons made in previous years showed an increase of 2.98 per cent in 1950, 4.3 per cent in 1949, and 6.35 per cent in 1948.

Public Purchasing

By Albert H. Hall

Executive Director, National Institute of Governmental Purchasing, Inc.,
Washington, D. C.

STATE and local governments felt the full economic impact of Korea and the defense production program in 1951. They experienced shortages of supplies, materials, and equipment and difficulty in obtaining adequate priority assistance from the federal government. In spite of price controls, prices rose alarmingly and the shrinking value of the tax dollar produced severe budgetary problems. To meet these problems some jurisdictions suspended purchasing restrictions by charter amendment or ordinance. Others raised limits on purchasing to permit buying without adherence to formal advertising and bidding requirements.

The screening of state and local bond issues by federal officials, a ban on construction of public facilities, and the inauguration of a controlled materials plan created further difficulties for public buyers. Termination clauses in public contracts and the familiar escalator clause began to appear. A federal civil defense system, established without adequate federal financial aid, further taxed the resourcefulness of public purchasing executives.

Organizations of public officials in Washington attempted unsuccessfully to obtain machinery for adequate priority assistance to state and local governments and for an advisory voice in the formulation of regulations affecting such units. Lessons of World War II were forgotten. A central government bureau which successfully provided for priority needs of state and local governments in World War II was not established, in spite of repeated urgings by the National Institute of Governmental Purchasing and other groups.

Instead, some 19 federal agencies were given claimant responsibilities for American governments and during the year state and local governments were faced with a maze of confusing and duplicating regulations and restrictions. This segmented approach to the priorities problems of state and local governments resulted in widespread buck-passing. Attempts were made by appeals to administrators and to the Congress to remedy the situation but these efforts failed. Furthermore, the Office of Price Stabilization initially claimed authority to impose price controls on sales of commodities and services by state and local government. After vigorous protests by organizations of public officials these regulations were modified to a large extent.

The year of 1952 will be a period of austerity for state and local governments in obtaining adequate supplies, materials, and equipment, and in the construction field. The defense production program will strike its full stride and state and local governments can hope for little relief in the solution of their problems before the early part of 1953. About the only relief which has been given thus far is a regulation enabling self-certification to obtain maintenance, repair, and operating supplies. In the year ahead this regulation, unless strengthened, may well constitute only a hunting license. A Division of Government and Public Services, established in the National Production Authority, has been given little authority or responsibility to give central direction and emphasis to the needs of state and local government.

American governments are solidly behind the defense effort but they rightly feel that their place as partners of American production has not been fully understood as yet in Washington. For example, the director of the Office of Defense Mobilization provided for the screening of state and local bond issues by a Federal Reserve Board voluntary credit restraint committee without any prior consultation with state or local officials. As another example, there has been no provision made in the controlled materials plan to provide the metal needs of state and local governments for fabrication and repairs. The attitude of mind evidenced by these examples must change in the coming year if state and local governments are to assume their rightful position in the defense production effort.

Administrative Developments. The movement toward centralization of public purchasing throughout the country continued vigorously. Among the public jurisdictions which set up central purchasing systems in 1951 are Brookline and Quincy, Massachusetts; Sunnyvale, California; Bayonne, New Jersey; Dover, New Hampshire; Muskogee, Oklahoma; New Haven, Connecticut; Charlotte, Michigan; LaCrosse, Wisconsin; and Trinidad, Colorado. Among the counties establishing new central purchasing systems were: Hamilton County (Chattanooga), Tennessee; St. Louis County (St. Louis), Missouri; Washoe County (Reno), Nevada; Siskiyou County (Yreka), California; and Pinellas County (Clearwater), Florida. The Orleans Parish School Board of New Orleans, Louisiana, also set up a new central purchasing system.

In Oakland, Denver, the state of New Hampshire, and Richmond, the purchase of all insurance was centralized and provision made for competitive bidding on insurance purchases.

To meet the problem created by the shrinking value of the tax dollar, purchasing limits without the necessity for formal bidding procedures were raised quite generally throughout the country. Increases took place in the state of Wisconsin; Cook County (Chicago), Illinois; Jackson, Michigan; and Milwaukee.

New manuals on purchasing procedures were issued by the state of Michigan, the New York City Housing Authority, and the Commonwealth of Virginia.

Annual reports were issued by the boards of education of the cities of Chicago and St. Louis; the District of Columbia; and the cities of Kansas City (Missouri), Seattle, Lewiston (Maine), Milwaukee, Chicago, Cleveland, Schenectady, Cincinnati, New York, Wichita, Norfolk, Cook County (Illinois), Montgomery County (Maryland), and Onondaga County (New York).

Research and Training. The Office of Services of the Government of Puerto Rico was surveyed by the Public Administration Service of Chicago. The city purchasing agent of Chicago, John F. Ward, served as a consultant in the survey. Mr. Ward also participated in an administrative survey, resulting in a new purchasing ordinance and system for Des Moines, Iowa.

The School of Business Administration and the Department of Institutes and Lectures of the University of California held purchasing institutes at Berkeley and Los Angeles. The American Hospital Association also held institutes on purchasing for hospital personnel.

Professional Publications. The Public Administration Service of Chicago published the revised edition of "Purchasing for Small Cities," prepared by Russell Forbes, former commissioner of purchase of the city of New York and now deputy administrator of the General Services Administration, Washington, D.C. The U.S. Veterans Administration issued a manual on principles of efficient storage. In Bakersfield, California, the city purchasing agent prepared and distributed to all vendors a brief pamphlet, entitled "How to Sell to the City of Bakersfield." The Defense Production Administration began publication of a weekly bulletin labelled "The Defense Production Record," which contains summaries of regulations and detailed developments in the defense production program. The National Fire Protection Association issued "Standards for Motor Fire Apparatus," and the American Society for Testing Materials and the American Standards Association issued a number of publications in the standards field.

Specifications. The National Institute of Governmental Purchasing continued to develop its large specifications library. The development of specifications continued briskly throughout state and local governments, as well as in the Federal Supply Service of the General Services Administration and in the Commodity Standards Division of the National Bureau of Standards.

Cooperative Buying. Michigan cities continued to receive more value for the tax dollar through a cooperative purchasing arrangement administered by the Michigan Municipal League with the assistance of the state purchasing division. In the state of New York municipalities continued to receive the benefits of state purchasing through participation in state contracts for bulk buying.

Cooperative buying arrangements also flourished in the city and county of Milwaukee and in the city of Cincinnati and Hamilton County. In South Carolina state agencies entered into an arrangement to purchase all gasoline under one contract.

Professional Organizations. The National Institute of Governmental Purchasing (730 Jackson Place, N.W., Washington 6, D.C.) held its Sixth Annual Conference and Products Exhibit in Washington in October with a registered attendance of 1,061. Ninety leading American business firms displayed their products to the group. A feature of the conference was the presentation of a plaque to City Purchasing Agent Alvin J. Holm of Los Angeles for his service as first president of the group and his contributions to the professionalization of public buying throughout the nation.

During the year a Virginia State Chapter of NIGP was formed, and state chapters of the Institute in Illinois, New Jersey, and Wisconsin carried on active programs of professional improvement. The Institute went on record as favoring a central government bureau to provide priority assistance in the defense production program and also planned for the study of commodity classification systems with recommended features of various systems to be adapted to state and local use. NIGP will hold its Seventh Annual Conference and Exhibit in Chicago on October 19-22, 1952.

The National Association of State Purchasing Officials met twice during the year and devoted attention to the professional problems of state purchasing. The oldest public purchasing organization in the United States, the California State, County and Municipal Purchasing Agents Association, carried on an active professional program in 1951.

Trends in Municipal Finances*

By Allen D. Manvel

Chief, Governments Division, United States Bureau of the Census

REVENUE and spending of city governments were up about 7 per cent in the fiscal year 1950 from the 1949 levels. General expenditure of the nation's 474 largest cities totaled $4,929,000,000, or $324,000,000 more than in 1949. Their general revenue was up $ 295,000,000 to a record high of $4,416,000,000. Outstanding debt of these cities rose to $8,626,000,000 as compared with the 1949 total of $8,046,000,000. The chart below depicts comparative 1949 and 1950 amounts of total general revenue and expenditure of the 474 cities, by size groups.

---

*This summary article, summary Tables 1 to 5, and detailed Table IX are adapted from the Census Bureau report, Compendium of City Government Finances in 1950.

A comparison of 1950 totals of income and outgo for the 474 largest cities show that: General expenditure exceeded general revenue by $513,000,000, or 11.6 per cent; general expenditure less provision for debt retirement exceeded general revenue by $209,000,000, or 4.7 per cent: and general revenue and borrowings together exceeded general expenditure by $65,000,000. These differences reflect for 1949-50 a slightly greater increase in expenditure than in revenue and a material rise in general debt.

At the time tabulations for this publication were prepared, final 1950 population figures were not yet available for most cities. Final returns then available for 174 cities were applied. Coverage, size-groupings, and per capita amounts herein as to the remaining 300 cities are based on preliminary data. For most of these cities the final 1950 population figures which have since become available differ only slightly from the preliminary figures.

For recent years, Census reporting on city finances has applied to the 397 cities which had over 25,000 inhabitants in 1940. Summary annual financial totals for these cities appear in Table 1 for 1942 through 1949. To aid users of the data who are concerned with historical trends, Table 1 below presents 1949 data on both the 1940 basis (i.e., for the 397 cities over 25,000 in 1940) and the 1950 basis (i.e., for the 474 cities having, in the light of preliminary population census findings, over 25,000 inhabitants in 1950). Following is the city distribution applied in developing the statistics which follow, including the computation of per capita amounts;[1]

Population Size Class	Number of Cities	1950 Population (Preliminary)
Over 1,000,000	5	17,359,396
500,000 to 1,000,000	13	9,146,573
250,000 to 500,000	21	7,709,169
100,000 to 250,000	67	9,943,924
50,000 to 100,000	125	8,854,777
25,000 to 50,000	243	8,563,486
Total	474	61,577,325

In 1950 the 474 cities covered by this report accounted for almost one-third (32.6 per cent) of the general revenue of all local governments in the United States and almost half (47.1 per cent) of all local public debt. Of the general revenue of all 16,220 municipalities in the nation, the 474 largest received 82.1 per cent; they accounted for 85.3 per cent of total city debt.[2] Two-fifths of all the people in the United States lived in these 474 cities in 1950.

General Revenue. General revenue of the 474 cities rose from $4,121,000,000 in 1949 to $4,416,000,000 in 1950, or 7.1 per cent. Property taxes were up 5.9 per cent, yielding $2,324,000,000. Sales and gross receipts taxes, including gasoline, cigarette, and other selective sales taxes, provided $415,000,000, or 4.6 per cent more than in 1949. Licenses and other miscellaneous taxes rose 13.1 per cent, but provided only $289,000,000.

---

[1] Final figures subsequently available from the 1950 Census of Population disclose a slightly different distribution and 7 additional cities—making a total of 481—having over 25,000 inhabitants in 1950.

[2] See Bureau of the Census, Governmental Revenue in 1950 and Governmental Debt in 1950.

Local tax collections of the 474 cities amounted to $3,027,000,000, or 68.6 per cent of their total general revenue in 1950. Aid received from other governments totaled $908,000,000, or 20.6 per cent, and the remaining 10.9 per cent was derived from charges and miscellaneous sources.

General Expenditure. The 474 largest cities spent $4,929,000,000 for general-government purposes in 1950, or 7.0 per cent more than the 1949 amount of $4,605,000,000.

More than two-thirds of the total, or $3,366,000,000, was for operation. This is 6.5 per cent more than operation spending of the year before. Every municipal function contributed to the 1950 increase in operation expenditure. The greatest rise was for public welfare, which rose $ 50,000,000, or 13.0 per cent. Next in amounts of dollar increase were public safety and schools.

Capital outlay rose 12.1 per cent, from $697,000,000 to $782,000,000. The rate of 1949-50 increase ranged widely as among the several population-size groups of cities.

Debt and Borrowing. Outstanding gross debt of the 474 largest cities rose in 1950 by $580,000,000 to $8,626,000,000, or 7.2 per cent. Their net long-term debt increased 7.8 per cent to $6,987,000,000.[3]

Of the 1950 totals, slightly more than half—$4,511,000,000 of gross debt or $3,667,000,000 of net long-term debt—was for general-government purposes, the remainder being for city enterprises.

City borrowings for general-government purposes rose 18.4 per cent to $578,000,000, exceeding by $274,000,000 the amount provided for general debt retirement.

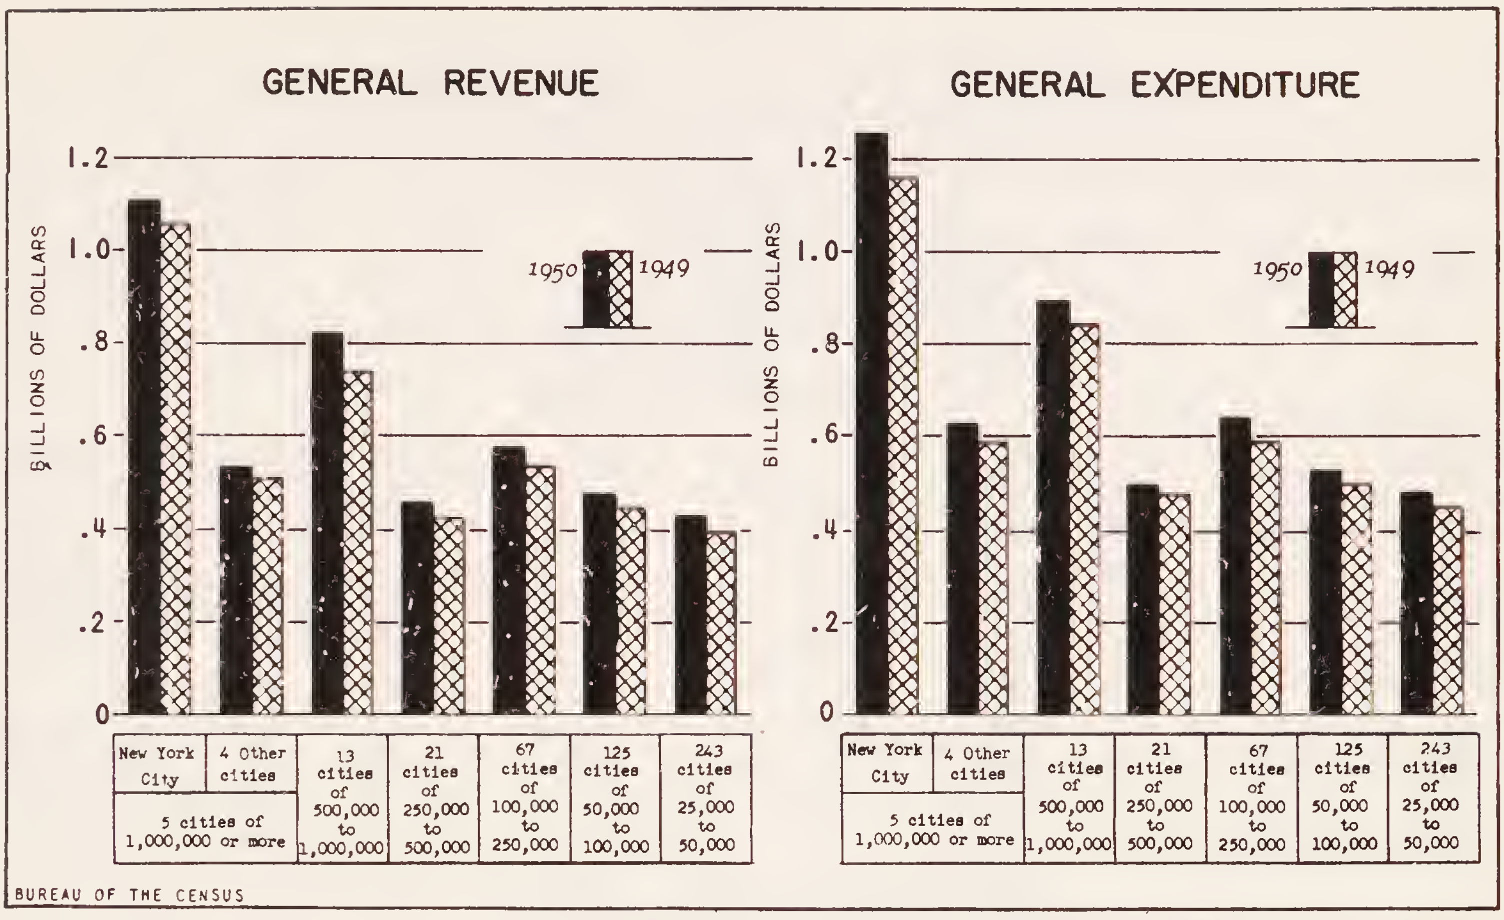
Timing and Scope of the Figures. The figures cited above and in the following tables relate to city fiscal years which ended between February 1, 1950, and January 31, 1951, (with only 18 closing their fiscal periods in January). Of the 474 cities, 254 ended their fiscal years on December 31.

In its reporting the Bureau of the Census makes a basic distinction between general-government finances and the transactions of trust funds and publicly owned enterprises (water supply, power, transit systems, and the like). The following tables relate mainly to general government finances.

It is to be noted that these statistics are for city corporations only and do not include amounts for other local governments overlying city areas. Thus, expenditure figures here for "schools" do not include spending by the overlying school districts which administer public education within about two-thirds of these 474 areas. Where schools are operated directly by the city corporation, this function generally comprises from 30 to 40 per cent of the city's total operation expense as against the 20.5 per cent shown here for the 474 cities altogether. This aspect of the report's cov-

---

[3] The difference between gross debt and net long-term debt comprised $225,000,000 in short-term debt and $ 1,413,000,000 in long-term debt that was offset by sinking-fund assets.



Source: Governments Division, Compendium of City Government Finances in 1950

Revenue and Expenditure of City Governments, by 1950 Population-Size Group: 1950 and 1949

erage is also important as to certain other functions such as public welfare, health, and hospitals.[4]

Current per capita data on city finances are presented in certain of the tables below. Such derived data have not been available from Census reports for recent years because of the large and uneven growth of cities since the 1940 population census.

Attempted comparisons of per capita financial data for individual cities and city size-groups should take particular account of the differences among the cities in their responsibilities for various functions and activities, as indicated above. For example, the per capita figures herein for the cities of 500,000 to 1,000,000 are generally much higher than those for other city size groups. It is to be noted that the 13 cities in this group include a high proportion which provide governmental services more commonly provided in other city areas by county or state governments or by independent school districts.

---

TABLE IX

GENERAL REVENUE AND EXPENDITURE AND GROSS AND NET LONG-TERM DEBT FOR CITIES OVER 25,000: 1950

This table includes 470 of the 474 cities of 25,000 population or more according to preliminary 1950 census figures. Data were not available for Daytona Beach, Fla., Lake Charles, La., Greenville, Miss., and Santa Fe, N. M., nor for the New England towns and Pennsylvania and New Jersey townships shown in other sections of the Year Book. Data are for fiscal years ending in calendar year 1950 except for a few ending in January, 1951, and are taken from the United States Bureau of the Census report, "Compendium of City Government Finances in 1950." Under GENERAL REVENUE, "Total" comprises all revenue of city general government—i.e., excluding revenue of city-owned enterprises and trust and sinking funds; "Local Taxes" shows revenue from city imposed taxes—property, income or payroll, sales and gross receipts taxes, etc.—including licenses and permits; "Aid From Other Governments" consists of grants and shared taxes received from other governments—federal, state, and local—for support of specified functions or for general pruposes; "Charges and Miscellaneous" consists of charges for current services, special assessments for capital outlay, net contributions from city enterprises, and other and unallocable revenue. Under GENERAL EXPENDITURES, "Total" comprises all expenditure for general-government functions—i.e., excluding expenditure of city-owned enterprises and trust and sinking funds; "Operation" expenditure is for services, materials, financial assistance to needy individuals and other current maintenance; "Capital Outlay" is for new construction of more or less permanent improvements, for purchase of land and buildings, and for equipment of durable value, whether from revenues or from proceeds of debt issued; "Provisions for Debt Retirement" consists of direct debt redemption (other than from sinking funds) plus payments into the sinking funds for debt redemption—both with relation to general debt only, not enterprise debt; "Interest" payments are costs for the use of credit capital (without adjustment for premium or discount on debt issued or retired) for general-government purposes, not enterprises; "Contributions to Employee Retirement" are payments made by the city to retirement funds that are either locally or state-administered for local employees; "Other" expenditure consists of aid paid to other governments, contributions to trust funds except for retirement purposes, and contributions to enterprise. Under DEBT, "Gross Debt" consists of outstanding long-term debt issued by or in the name of the city or its agencies, including non-guaranteed debt. "Net Long-Term Debt" is total long-term debt less sinking-fund offsets. The difference between the total and the general-government figures represents net long-term debt for city-owned enterprises. A superior numeral (1) indicates footnotes at end of table.

City	Pop. 1950 (000 omitted)	GENERAL REVENUE (in thousands)				GENERAL EXPENDITURES (in thousands)							DEBT (in thousands)

Financial Data for Small Cities

FINANCIAL data for cities of less than 25,000 population are presented in the Year Book for the first time. The gross revenues, expenditures, and net debt shown in Table X, as reported by the officials of 684 cities, are summarized in Table 1. Local property taxes comprised 37 per cent of gross revenue in cities of 10,000 to 25,000, and 33 per cent in cities of 5,000 to 10,000. On the expenditure side nearly 10 per cent of the total was for principal and interest payments on city debt. Revenue bonds outstanding, reported by 279 of the 684 cities, totaled $141 million, an average of $504,000 per city.

The data in Table X are for municipal governments only and do not reflect revenues and expenditures of counties, school districts, and other local governments. Comparisons of expenditures between cities must be made with caution because even these relatively small cities are highly diversified in activities. Sources of revenue also vary widely. Some cities receive substantial amounts through state grants-in-aid and shared taxes, others receive nothing from this source. Some cities realize enough net gain from utilities to have low property taxes. Within these limits comparisons made with the per cent and per capita figures in Table 1 and the city data in Table X will serve as a useful starting point for analyzing the financial structure of a specific city.

TABLE 1

SUMMARY OF CITY GOVERNMENT FINANCES: 1951
Cities of 5,000 to 25,000 Population

Item	Cities of 10,000 to 25,000			Cities of 5,000 to 10,000

TABLE X

GROSS REVENUE AND EXPENDITURE AND NET DEBT FOR CITIES OF 5,000 TO 25,000: 1951

This table includes 684 of the 2,017 cities between 5,000 and 25,000 population. Data are for calendar year 1951 or the fiscal year ending in 1951 and were obtained from city officials in early 1952. Under heading **REVENUES**, "Property Taxes" includes taxes for debt service as well as for general purposes; "City-Owned Utilities" shows gross revenues (not net contributions or in-lieu payments); "Aids and Shared Taxes" includes amounts from other governments—federal, state, and local; "All Other" includes local nonproperty taxes (sales, gasoline, tobacco, etc.) and miscellaneous revenues. Under **EXPENDITURES**, the first two columns show gross expenditures for operation and maintenance; "Debt Payment" includes principal and interest. Under **DEBT**, "General Obligation Bonds" are secured by the full faith and credit of the city government; "Revenue Bonds" are secured by potential earnings of a city-owned enterprise (usually public utilities); "Other Debt" includes special assessment bonds, notes, warrants, and tax certificates.

City	1950 Pop. (000 omitted)	REVENUES						EXPENDITURES					DEBT			
		Prop. Taxes	Licenses and Fees	City-Owned Utilities	Aids and Shared Taxes	All Other	Total	General Operations	City-Owned Utilities	Debt Payment	All Other	Total	General Obligation Bonds	Revenue Bonds	Other Debt	Total

Sources of Information: Finance

Sources of Statistics: Finance

Bird, Frederick L. Trend of Tax Delinquency, 1930-46. Municipal Service Department. Dun and Bradstreet, Inc., 290 Broadway, New York. 1947. Shows tax delinquency for cities over 50,000 including percentage delinquent each year, ratio of collections to year's levy, etc.

International City Managers' Association. Governmental Data for Small Council-Manager Cities. 1944. Gives number, term, and salary of councilmen; revenues, expenditures, and indebtedness; number of employees; and utilities owned and operated—for 126 cities of less than 5,000 population.

State Financial Reports. Official state agencies in 30 states regularly publish some municipal finance data, with rather complete information contained in the reports issued by such states as California, Connecticut, Iowa, Massachusetts, Minnesota, New Jersey, New York, Ohio, Washington, Wisconsin, and only assessed valuations and tax rates in others as in Michigan, Rhode Island, and West Virginia.

The Tax Foundation. Facts and Figures on Government Finance, 1950-51. Contains data on federal, state, and local finances, but not individual city data. 30 Rockefeller Plaza, New York 20, N. Y.

Tax Rates of American Cities, National Municipal Review, 299 Broadway, New York City 7. Annual. Shows population; assessed value, fiscal year; tax dates and penalties; rates for city, schools, and state; ratio of assessed to true value; adjusted tax rate; amount of homestead exemption. Compiled by the Citizens Research Council of Michigan.

Tax Systems: A Reference Book of Legislative and Statistical Information for all of the United States and for Numerous Other Countries and Jurisdictions, 13th edition, 1951. Commerce Clearing House, 214 North Michigan Avenue, Chicago.

U. S. Bureau of the Census. Three reports annually on city government finances, respectively providing preliminary summary totals for size-groups of cities over 25,000, detailed statistics on the 37 largest cities, and comparative data for all 397 cities over 25,000. Statistics also issued annually on finances of States and, in terms of national totals by type of government, on governmental debt and governmental revenue. Comparative financial statistics for cities under 25,000 and data for townships and New England towns, as well as school districts, also issued for 1942 as part of the decennial "Census of Governments." Current reports are described, and recent special studies listed, in a processed listing, "Census Bureau Publications on Governments," available from Bureau of the Census, Washington 25, D.C., on request. (Recent Census finance reports are shown below under "New Books and Pamphlets.")

General Administration

Summary of 1951 developments in:

ORGANIZATION REPORTING COUNCIL-MANAGER PLAN

Administrative Organization

By H. G. Pope

Executive Director, Public Administration Service, Chicago

THE year 1951 saw developments in many phases of municipal administration. Implicit in much of the activity was the continued trend of rising costs of providing normal municipal services to the people.

Inflationary pressures were reflected in state legislation affecting municipalities in 1951. For example, nine states made upward revisions of the limits on official interest in contracts or in purchasing or contracting without bids or other similar provisos and 10 statutes in nine states lifted debt ceilings in whole or in part, or added new exclusions in whole or in part under debt limitation formulae. Also, revenue bond authority was extended for sewage plants in Illinois, Kansas, and Pennsylvania, for airports in Indiana, for auditoriums in South Dakota, factory buildings in Tennessee, gas plants in Texas, and toll bridges in Illinois. A number of states granted new permissive taxes to municipalities including, in a number of instances, quite comprehensive revenue powers to deal with parking problems.

Authorities. The necessity of continuing present services and meeting the demand for new or improved services, with the concomitant increases in unit costs and with many avenues of taxation already fully exploited by federal and state jurisdictions, municipalities continue to look for new methods of financing operations. One device, the "authority," usually brings little or no revenue as such into the general fund of a city, but does provide certain municipal services and is becoming sufficiently common to warrant attention in any comment on municipal organization. An authority may be variously defined but is probably most generally regarded as a means through which a government may provide needed services and facilities on a self-liquidating basis. As such, an authority is usually set up outside the normal organization of government and has full governmental powers in respect to its designated function, comparatively unrestrained by the type of controls which normally exist in the regular governmental structure. On the other hand, an authority's power is usually limited as to function, e.g., a water authority or sewage disposal authority, or to several related functions.

The authority device is extremely attractive as a means of settling organizational and financing problems arising out of a multiplicity of jurisdictions and to cities which have reached, or are near their debt limitations, and which are faced with problems demanding immediate attention. Authorities are adaptable; for example, in Pennsylvania there are reported sewer, water, parking, factory building, school, war memorial, flood control, airport, and combination municipal building and theater authorities. Because of their flexibility and because they free the regular city financial structure from burdensome obligations, authorities may come to be regarded as a panacea for municipal ills, without sufficient attention to the possibility that a combination of authorities within a jurisdiction can fragmentize local government, seriously disrupt regular municipal operations, and contribute to taking more and more government operations out from under popular control.

In any event, the creation of an authority in turn creates the attendant problem of maintaining adequate liaison between it and existing jurisdictions. For example, a parking authority's decisions may contradict programs of planning, police, and public works departments; may be a very real factor in the development of new subdivisions, and in the growth of commercial and business centers; or may otherwise materially affect the plans and operations of other municipal services. When authorities extend through several separate governmental jurisdictions, as can be the case, the problems of organization, including liaison, are multiplied.

It is impossible to generalize as to when an authority should be established and when it should not. Each case must be judged on its individual merits. In some cases an authority may be the only answer to a particular problem; however, in many others reorganization and improvements within the regular governmental structure represent a sounder if less convenient alternative.

Among the new authorities that have been established are a redevelopment authority and a parking authority in Easton, Pennsylvania, parking authorities in Sharon, Pennsylvania, and Norwalk, Connecticut, and sewer authorities in York and Penn Townships, Pennsylvania. Buffalo, New York, created a board of the port of Buffalo to manage all dock and harbor facilities. Berkley, Birmingham, Clawson, Ferndale, Hazel Park, Huntington Woods, Oak Park, Pleasant Ridge, Royal Oak, and Southfield Township, all in Southeastern Michigan formed a disposal authority whose governing board is composed of the nine city managers. New York state legislation adopted measures to create a Long Island Transit Authority and a Railroad Redevelopment Corporation but defeated a measure to enlarge the power of the New York City Parking Authority. Birmingham, Alabama, created a water board, an entirely separate public corporation, to buy and operate the city water system.

Twelve states passed legislation in 1951 granting some or all of their cities permission to establish parking authorities. They are: Arkansas, California, Indiana, New Jersey, Pennsylvania, West Virginia, Connecticut, Florida, Maine, Maryland, New York, and Tennessee. Bristol, Virginia, set up a utility board to manage and operate electric, water, and sewer systems. Newton, Iowa, created a board of water works trustees.

In addition several special districts were created. The Lower Neueces River Water District was created to provide additional water supply for the Corpus Christi area. It is presently financed by a water supply contract with the City of Corpus Christi. New Rochelle and Westchester County jointly created a New Rochelle Sewer District to construct a new sewage disposal plant. The city of Tucson and Pima County, Arizona, have joined to establish a sanitary district, and in St. Louis, Missouri, a joint interim committee appointed by city and county officials has recommended that a sewer district be created for the metropolitan area.

Boards and Commissions. The practice of appointing boards and commissions, whether advisory, regulatory, or administrative, and touching many phases of municipal operations, continued unabated in 1951. Although information is far from complete, the number of cities reporting additions was substantially greater than those that abolished boards and commissions. As examples, Hamilton, Ohio, established a health advisory board; Kalamazoo, Michigan, created a rent advisory board to review hardship cases where rents have been increased; Winston-Salem, North Carolina, established a board of alcoholic beverage control; North Tonawanda, New York, created a smoke abatement commission; and Twin Falls, Idaho, established a contractor's examining board.

An increasing concern of municipalities regarding traffic and parking problems is evidenced not only by activity in the field of authorities but by the establishing of municipal traffic commissions. Abilene, Texas, and Plainfield, New Jersey, organized advisory traffic commissions; Petersburg, Virginia, created a city traffic commission to regulate traffic and operate off-street parking lots. A significant development in this area occurred in Detroit, Michigan, where the voters approved a charter amendment that established a street and traffic department, headed by a four-man commission appointed by the mayor, reducing the number of agencies handling traffic matters from 15 to five.

Several cities either reduced or abolished boards and commissions. Boulder, Colorado, abolished its parks and planning commission; Burbank, California, changed the role of its park, recreation, and library boards from administrative to advisory functions; Bismarck, North Dakota, disbanded its recreation board; Brownwood, Texas, abolished its board of recreation and parks; and Bay City, Michigan, its city planning commission.

Cooperation, Consolidation, Annexation. The field of intermunicipal arrangements, consolidation, and annexation saw some major developments in 1951. One of the most important of these was the consolidation of the city of Philadelphia and Philadelphia County and the adoption of a new charter. These two jurisdictions had had the same political and geographic boundaries for 97 years. Under the new system Philadelphia's recently reorganized city government will incorporate county units into city departments, place county employees under civil service and integrate county and city jobs.

A significant reallocation of functions took place between the city of Atlanta and Fulton County, Georgia, under a statute of the state legislature. The reallocation included annexation by Atlanta of 82 square miles of territory with a population of approximately 100,000 residents and the reallocation of functions to reduce the duplication of services common to overlapping jurisdictions. For example, the city will take over fire, police, parks, and sanitation services and the county will be responsible for health services. The law provides for the transfer of employees of the two jurisdictions without loss of rights, and studies are under way to resolve existing differences and to arrange some integration of city-county personnel systems. School departments will not be merged; but 38 county schools in the annexed area will become part of the city school system.

Consolidation on a smaller scale took place in Connecitcut. Norwich town and Norwich city residents voted to become a single city. Heretofore both jurisdictions had separate municipal systems, each providing essentially similar services. This action reduces to four the number of places in Connecticut where a town and a city with approximately coterminous boundaries maintain separate governments. Other consolidations of two or more units which took place in 1951 included the city of Fernandina and the town of Fernandina Beach, Florida, and the territory lying between the two municipalities, and Carson City and Ormsby County in Nevada.

Organization. The continued growth of council-manager plan of municipal government continued to represent the most significant change in municipal organization and administration. In this respect, 1951 was somewhat of a banner year as it was the 40th anniversary of the first adoption of a council-manager charter by a vote of the people (Sumter, South Carolina, in 1911) and the first year in which the number of council-manager places exceeded a thousand. There were 57 adoptions of the council-manager plan in 1951, bringing the total number of jurisdictions operating under the plan to 1,083 as of the end of 1951, all except 40 of which are in the continental United States. There were four abandonments of the plan, all by New England communities—Keene and Dover, New Hampshire; Brooks, Maine; and Montpellier, Vermont, bringing to only 46 the total number of abandonments of the plan during its entire history.

San Antonio, Texas, became the fourth largest city to adopt the plan. The change from the commission plan was effected by a new charter after years of effort by local governmental research and reform groups. The city government was at the close of the year in the process of thorough reorganization, extending not only to matters of administrative structure, but also including, among other things, the installation of a merit system of personnel administration and the complete reassessment of properties for tax purposes.

There were also several particularly significant developments outside the council-manager plan but embracing, in varying degree and by various means, the principle of centralization of administrative authority and provision of technical management assistance to the chief executive post.

When the people of Philadelphia voted for city-county consolidation they also approved a new charter incorporating a strong-mayor type government with several unusual features. It created the office of the managing director who is one of the mayor's principal assistants and appoints most of the department heads with the consent of the mayor, and who is responsible for supervision of these departments' activities. The mayor's other principal assistants include a director of finance who heads an integrated department responsible for budgeting, accounting, purchasing, and revenue collection and a city representative who is designated as the ceremonial representative, public relations officer, and head of the city's department of commerce. The charter also reduced the number of council members from 22 to 17, established a commission of human relations, a department of records, a department of licenses and inspection, and an improved provision for recall.

In Los Angeles one of the amendments to the charter adopted at the election of May 29, 1951, provided for the appointment of a city administrative officer by the mayor, subject to confirmation by the council. The charter amendment gives the city administrative officer considerable authority as he is to plan and direct budgetary administration and administrative management; to prescribe rules and standards governing the matters under his jurisdiction: to make temporary transfers of personnel, and to recommend transfers of appropriated funds; and to assume the duties of the office of the director of the Bureau of the Budget and Efficiency which was abolished by the same amendment.

A much smaller city, Salisbury, Maryland, adopted a new charter which provides for the office of executive secretary to the mayor. The executive secretary is to be the chief administrative officer of the city on the basis of authority to be delegated to him by the mayor.

Other organizational developments saw cities continue to revise their departmental structures and to single out particular functions for special attention. Brownwood, Texas, established a purchasing department; Las Vagas, Nevada, and several other cities established merit systems and appointed personnel directors. Providence, Rhode Island, replaced its three-man bureau of police and fire with a one-man commissioner of public safety; La Crosse, Wisconsin, created the office of finance and purchase; Sheboygan, Wisconsin, abolished its board of public works and replaced it by a commissioner to be appointed by the mayor; El Dorado, Kansas, consolidated its street, parks, airport, and building maintenance departments into a public works department; and by popular vote Fort Lauderdale, Florida, combined its tax department and assessing department with that of the county.

Home Rule. Eight states made some progress along the road to granting home rule to municipalities. Maryland gave limited grants of home rule to Salisbury, Mt. Airy, Frederick, and passed a special act applying to the city of Cumberland. Georgia replaced its 1947 home rule act which had been declared unconstitutional. Connecticut authorized cities and boroughs to "make, amend, add to or replace" their charters provided, however, that before any action can be effective 51 per cent of the registered voters must have participated in the election. Rhode Island added a home rule amendment to its constitution and East Providence and Jamestown have established charter commissions pursuant to its provisions. Florida has for presentation to voters a constitutional amendment which gives the legislature power to grant any county a charter, and provides the manner in which a county may form its own charter. Tennessee authorized a referendum on a limited constitutional convention including the subject of home rule for counties and cities. West Virginia legislation gave all municipalities the taxation and financial powers conferred on home rule cities of the respective classes and also provided alternative plans for charter amendment in second and third class cities. Washington legislators defeated a proposed home rule amendment of the constitution. New Orleans, Louisiana, established a charter commission which must report by April 1, 1952, with the first home rule charter in New Orleans history.

Municipal Reporting in 1951

By Richard H. Custer

Town Manager, Windsor, Connecticut

EACH of 154 United States cities is known to have issued an annual municipal report to its citizens during 1951, an increase of only six over the previous year. Of these, 147 furnished to the International City Managers' Association, in answer to a questionnaire, detailed information about their report and about other reporting media employed by them to inform the public concerning local affairs. The Association's survey showed that the 1951 reports were shorter, more prompt in appearing, more widely distributed, and more costly than their predecessors of 1950, and also that less use was made by cities than formerly of radio, special leaflets, movies, and other reporting media.

The survey also showed that as in the past most of the citizens who received information about the activities of their local governments in 1951 reside in council-manager communities. It appears significant also that of 16 cities which in 1951 issued an annual report for the first time, 14 are cities which adopted the council-manager form of government within the relatively recent past.

ANNUAL REPORTS. Although 50 per cent more cities issued an annual report in 1951 than in 1949, a distressingly large number of municipalities still have not chosen to emulate the common business custom of rendering a year-end accounting to their "stockholders." On the other hand, of those cities which issued reports last year, many achieved an exceptional level of excellence in their presentation of information about the year's activities.

The typical 1951 annual report was 32 pages in length as compared with 43 pages in 1950 and 48 pages in 1949. It was issued 13 weeks after the end of the year as compared with 14 weeks in 1950 and 22 weeks in 1949. One in every five citizens received a copy of the 1951 report. In 1950 there was one for every sixth citizen and in 1949 one for every 10 persons.

The 1951 report was the first annual report published by 16 cities: Hayward and Woodland, California; Galena, Illinois; Council Bluffs and Des Moines, Iowa; Alma and Dearborn, Michigan; Nevada and Marshall, Missouri; McCook, Nebraska; Mooresville, North Carolina; Camden, South Carolina; Austin, Marshall, and Temple, Texas; and Eau Claire, Wisconsin. The median city participating in the survey, however, has issued a report annually for the past six years, and 55 cities indicated publication for 10 years or more.

The cost of printing the typical report in 1951 rose to $550 from $468 the previous year, but remained less than the $600 spent in 1949. One large city invested $14,653 in this vehicle of public information, while several smaller cities were able to place a copy in the hands of every citizen for less than $500.

Detailed information on the above features of last years' annual reports is presented in the three following sections, while certain statistical data pertaining to them are given in Table 1, which is based on the 147 returned questionnaires. Census figures of 1950 were used in computing population per copy printed, and the figures for publication expense do not include the costs of writing, editing, or distributing the reports.

TABLE 1

SUMMARY OF DATA ABOUT ANNUAL MUNICIPAL REPORTS OF 147 CITIES: 1951

Population Group	No. of Cities	Population Per Copy Printed		Number of Pages		No. Weeks, End of Period Covered to First Distribution		Publication Expense	
		Range	Median	Range	Median	Range	Median	Range	Median
Over 100,000	18	1-200	21	8-112	36	0-61	14	550-14,653	2659
50,000 to 100,000	9	3-13	6	6-60	30	0-29	17	280-6534	1120
25,000 to 50,000	24	1-286	12	2-184	32	2-74	20	251-4680	784
10,000 to 25,000	40	1-95	7	4-296	36	4-63	17	25-3250	550
5,000 to 10,000	37	2-332	4	2-112	25	2-48	13	30-1700	327
Under 5,000	19	1-21	2	1-92	47	0-32	5	55-729	475
All Cities	147	1-332	5	1-296	32	0-74	13	25-14,653	550

1. Annual Reports—Form and Contents. Many municipal officials who issued an annual report in 1950 were not content in 1951 to follow its pattern and made some change designed to improve its readability or attractiveness. Such changes were reported by 37 cities and ranged from a somewhat greater emphasis on illustrative devices to radical revisions in presentation and format. More extensive use was made of charts, graphs, and photographs, for example, by Mountain Brook, Alabama; Farmington and Hartford, Connecticut; Salina, Kansas; Brunswick, Maine; Berkley and Pontiac, Michigan; University City, Missouri; Newark, New Jersey; and Milwaukee, Wisconsin. Two cities — East Hartford, Connecticut, and Schenectady, New York—changed from booklet-type to newspaper-style reports in 1951, while Glendale, Arizona, and Junction City, Kansas, did the reverse, and four other cities reported a change from 1950 in the form or size of their 1951 publication. Cleveland and Dayton, Ohio, and Derry, New Hampshire, indicated they had made comprehensive revisions, not only in the form of their reports but also in the organization and presentation of material.

The 6x9-inch booklet continued as the most popular size, but 11 municipalities used a tabloid or newspaper size and format. Reports consisting of a single multiple-folded sheet were issued by Chico and Oxnard, California; Columbus, Georgia; Galena, Glencoe and Glenview, Illinois; Kansas City, Missouri; and Dayton, Ohio. Saginaw, Michigan's report was an 8-1/2x3-inch booklet which fits conveniently in an inside coat pocket.

Booklet-type reports. Realizing that an annual report must meet stiff competition for the attention of the reading public, many cities in 1951 made a special effort to make the front cover of their booklet attractive and appealing. On these reports, the use of color, photographs, or eye-catching design and type face resulted in quite a contrast with the typical report cover of several years ago which consisted of uninteresting solid-color stock imprinted with plain black type.

Color and artistic design were combined by Des Moines, Iowa; Westminster, Maryland; and Richland, Washington, to make their report covers attractive, while Cambridge, Massachusetts, featured several color photographs of city activity on its cover. An appropriate jubilee spirit was caught by the use of a vividly colorful border on the report of San Diego, California, which celebrated its centennial during the year.

Aerial photographs of the municipality continued as a popular design for the annual report cover in 1951, and was used by Wayne, Michigan; Mooresville and Statesville, North Carolina; Grants Pass, Oregon; Sumter, South Carolina; Norfolk, Virginia; and Eau Claire and Milwaukee, Wisconsin. An attractive photo of a local beach added interest to the cover of the Muskegon, Michigan, report, while Cincinnati, Ohio, utilized an effective night photograph of the city skyline. A clever design of the partly-opened door to the city manager's office invited citizens of Hartford, Connecticut, to look further into the contents of their city report.

Novel titles aroused reader interest in several cities. Albert Lea, Minnesota, used the cover design of a national news-magazine and the title "LOOK at your city government's accomplishments," while Greenwich, Connecticut, took a leaf from commercial advertising and entitled its annual report summary "Everybody Reads the Summary." The Windsor, Connecticut, report, which was distributed during the Thanksgiving season, was entitled "Taxgiving Story."

Several cities also utilized the outside back cover of their reports. Brunswick, Maine; Cambridge, Massachusetts; and Dover, New Hampshire, printed a telephone directory of municipal offices, while Royal Oak, Michigan showed an organization chart of the local government. Pittsburg, Kansas, filled the back cover space with a "before and after" picture of a street light installation.

Between their covers, many of the 1951 reports contained well-organized and well-presented textual information, effectively supplemented by the use of color and illustrative devices. The first several pages of the typical report were devoted to a letter of transmittal from the chief executive and a brief summary of the major accomplishments during the year. The bulk of the report then was devoted to a description of the operating activities of the city and summary financial statements.

The relatively new function of civil defense received attention in many reports, but the old one of education generally was not treated in any detail. Several of the better reports effectively presented information on problems facing the city and plans for solving them. Cambridge, Massachusetts, and Norfolk, Virginia, for example, printed color maps of the city showing the location of proposed capital improvements, and Hartford, Connecticut, reproduced its six-year capital improvement budget.

The financial section of most of the 1951 reports was clearly labeled and easily found by the reader, and generally presented concise information on revenues and expenditures for the year. Many cities showed a year-end balance sheet and a chart indicating the distribution of the tax dollar. San Diego, California, emphasized that four independent jurisdictions receive a "slice" of the tax dollar in that city, by cutting a page of its report into four horizontal sections, each describing one of the jurisdictions and the financial implications of its operations.

The methods used to supplement or highlight important textual items varied widely in the 1951 reports. Although Cincinnati and Cleveland, Ohio, as well as Muskegon, Michigan, included many graphs or charts for purposes of statistical comparisons, it appeared that generally such devices were neglected or, where used, were not very well done. Pictures and sketches, on the other hand, were widely employed. Perhaps the most effective were a number of actual color photographs in an eight-page folder published by Kansas City, Missouri.

Pupils in the local school art classes drew all the illustrations for the Stratford, Connecticut, report. While the pictorial and art work in many reports achieved a high standard and represented a considerable contrast to the solid text of reports issued not too long ago, some report editors in 1951 fell into one or more of the following pitfalls: an excessive and therefore confusing display of pictorial matter; too many pictures of people or stationary objects; poor reproduction of half-tones.

Newspaper-type reports. The cities which issued a newspaper or tabloid-type annual report in 1951 were: East Hartford, Connecticut; Council Bluffs and Mason City, Iowa; Hutchinson and Wichita, Kansas; New Orleans, Louisiana; St. Johns, Michigan; Marshall, Missouri; Schenectady, New York; Marshall, Texas; and Richmond, Virginia. The East Hartford and Schenectady reports, although in tabloid form, were published and distributed by the city, while all other reports of this type were printed as a part of or supplement to a regular local newspaper. The Marshall (Texas) and Wichita publications appeared as Sunday supplements, the latter in two different newspapers. Ranging in length from one to 16 pages, all of the reports except that of Schenectady, which used heavy coated paper, were reproduced on newspaper stock. Most of the reports followed ordinary newspaper format and style, with individually headlined stories on all phases of local government activity, but Council Bluffs and Mason City organized their material so that each page presented information on only a single municipal function or department.

2. Annual Reports—Distribution. There was greater realization in 1951 than ever before that little is gained by the publication of a report unless it is made easily available to its intended readers. A copy of the typical 1951 annual report was printed for every five persons in the city, a considerable improvement over the 1-to-10 ratio which prevailed in 1949. Among the largest cities, Wichita, Kansas, and New Orleans, Louisiana,

both of which used newspaper reproduction and distribution, issued a copy for every citizen, and enough copies of the Richmond, Virginia, newspaper report were printed to reach every second citizen. A total of nine cities published enough copies for their entire population, and 19 cities for half their population.

All cities made copies of their 1951 report available at the city hall, and almost half of them depended on this method alone for placing the report in the hands of the public. Many cities supplemented this method of distribution, however, either by house-to-house delivery or by mailing. Nine cities used hired delivery men, and 13 used city employees to distribute reports to all or some local residences. Derry, New Hampshire, was able to obtain volunteers for this purpose, while Keene, New Hampshire, paid local newsboys to leave a copy at each home on their route. Members of a high school student organization delivered the Windsor, Connecticut, report and sold copies of a new city street map as they went, retaining the proceeds for their club treasury. Most cities also saw that copies were delivered to civic clubs and to local schools for use in civics classes.

Heavy use was made of the mails for distributing reports in 1951, but there was wide variety in the make-up of the mailing lists. All utility customers received a mailed copy in 21 cities, while 22 cities sent a copy to each taxpayer. Other mailing lists comprised telephone subscribers, registered voters, taxpayers owning property valued above some specified amount, or citizens who requested a report. Residents of Burbank, California, for example, were notified by an enclosure with their utility bill of the availability of the report and an extra address stub on the bill was used to mail a copy to anyone requesting it.

Publicity on the availability of the report was limited in most cities to newspaper articles, but Oglesby, Illinois; Taunton, Massachusetts; and Albert Lea, Minnesota, also gave radio publicity when the report appeared. Rockland, Maine, prior to printing and distributing its booklet, published the report in the local press in four weekly installments.

3. Annual Reports—Type and Cost. Although commercial letterpress printing continued in 1951 as the prevalent method of reproduction, 19 cities produced good results with offset printing, and 16 others stencil-duplicated their report on city-owned equipment. Danvers, Massachusetts, used a city-owned press to print its report, and the Saginaw, Michigan, offset-printed report was prepared on city equipment.

After a decrease in 1950 from the previous year, the cost of printing the typical report climbed upward again in 1951, from $468 to $550. The greatest expenditure in 1951 was made by Cleveland, Ohio, which spent $ 14,653 for 50,000 copies of a profusely-illustrated, large-size booklet, while Kansas City, Missouri, prepared 180,000 copies of its 8-page folder-type report at a cost of $ 8,100.

LEAFLETS. Citizens of 66 municipalities received at least one special leaflet or pamphlet from their municipal officials during 1951, as compared with 76 such cities in 1950. Several counties and Canadian cities also used this medium of public information in both years. The United States cities reporting the publication of leaflets in 1951 were: Phoenix, Arizona; West Memphis, Arkansas; Alameda, Burbank, El Cerrito, Inglewood, San Jose, San Mateo County, and San Rafael, California; Glenwood Springs, Colorado; East Hartford, Farmington, Hartford, Manchester, and Stratford, Connecticut; Coral Gables, Florida; Council Bluffs and Des Moines, Iowa; Brookfield, Glencoe, Oglesby, and Winnetka, Illinois; Bloomington, Indiana; Abilene, Junction City, Emporia, Pittsburg, and Salina, Kansas; Fort Thomas and Lexington, Kentucky; Bangor, Maine; Cambridge, Massachusetts; Birmingham, Clawson, East Lansing, Escanaba, Flint, Hazel Park, Jackson, Midland, and Royal Oak, Michigan; Columbia Heights, Minnesota; Brookfield, Joplin, and University City, Missouri; Dover, New Hampshire; Fair Lawn and Newark, New Jersey; Garden City, Lynbrook, Malverne, Rockville Centre, Schenectady, and Yonkers, New York; Guilford County and Mooresville, North Carolina; Grand Forks, North Dakota; Eugene, Oregon; Mt. Lebanon Township and Quakertown, Pennsylvania; Greenwood, South Carolina; Big Stone Gap and Franklin, Virginia; Burnett and Highland Park, Texas; Morgantown, West Virginia; and Janesville, Wisconsin.

While many of the leaflets issued during 1951 were explanatory enclosures with tax bills, a number of others were prepared for various miscellaneous purposes of local interest to citizens. Eight cities published periodic newsletters for public consumption during the year.

The leaflets which accompanied new tax bills endeavored generally to explain the distribution of the tax dollar among municipal functions and governmental jurisdictions, or the reasons for an increase in the tax bill. Salina, Kansas, for example, showed in a pie chart the percentage distribution of local tax funds among five jurisdictions and then presented a breakdown of the city's share in terms of the monthly cost for various municipal services, while similar information was given in effective two-color leaflets issued by Mt. Lebanon Township, Pennsylvania, and Winnetka, Illinois.

The relatively small share received by the city from the total tax bill also was emphasized in the leaflets of Burbank, California, and Brookfield and Glencoe, Illinois. Lexington, Kentucky, and Birmingham, Michigan, on the other hand, concentrated on showing how the city's share of the tax revenue was spent on different services, the former city presenting costs on an annual, monthly, and weekly basis.

Several cities utilized their tax bill enclosure to explain increases in the municipal budget, Hartford, Connecticut's, two-color leaflet and Dover, New Hampshire's, explanatory folder being excellent examples of this type. Statistical comparisons with the cost-of-living index and with the tax rates of other communities in the area were used by some cities to highlight the message in their leaflets. Cambridge, Massachusetts, for example, mailed a blotter with its tax bills pointing out that city's unique record of a lower tax rate in 1951 than in 1941.

Leaflets were used by several cities to present information to citizens concerning proposed bond issues or major improvement projects. The city of Flint, Michigan, for example, cooperated with a local citizen group in distributing an effective leaflet, entitled "It Takes 9 Good Men to Make a Good Ball Club," and explaining nine improvements to be voted upon at a forthcoming bond issue referendum. A similar leaflet was issued by University City, Missouri, where nine major projects also were before the voters, while East Hartford, Connecticut, showed the layout of a proposed new high school and presented information about it in question and answer form. Questions and answers also were used in a Eugene, Oregon, leaflet about a proposed special tax levy for street improvements.

Leaflets were employed for a variety of other special purposes during 1951. Midland, Michigan, and Fairlawn, New Jersey, for example, took this means of explaining the recent re-assessment of property in their cities, the latter making effective use of cartoons to illustrate the text. New developments or special accomplishments of some single city department were the subject of leaflets in Phoenix, Arizona, which described services of the local health department, and San Jose, California, where fire department operations were summarized in a folder distributed at the dedication of a new central fire station.

Abilene, Kansas, gave to all water customers a small leaflet describing the city's new sanitary land fill, while Des Moines, Iowa, in a colorful brochure called "The Story of Herkimer," appealed to householders for cooperation in the local garbage collection program, the appeal being made by Herkimer the garbage can. A general summary of the year's operations and finances, constituting in effect a condensed annual city report, was published in leaflet form by a number of municipalities. The city council in Bangor, Maine, endeavored to arouse interest in council meetings by mailing to all utility customers a leaflet inviting their attendance and showing the seating arrangements in the council chamber.

The eight cities which published periodic rather than one-time leaflets or newsletters during 1951 were: Alameda, California; Farmington, Connecticut; Oglesby, Illinois; Garden City, Lynbrook, Malverne and Rockville Center, New York; and Big Stone Gap, Virginia. The Oglesby, Lynbrook, and Rockville Center publications were issued monthly, while the Alameda and Malverne leaflets appeared bi-monthly, the Big Stone Gap newsletter was quarterly, and the Farmington and Garden City brochures were published "now and then." The Alameda leaflets, which are entitled "Memos on Your City," informed citizens on some different subject of special interest in each issue, including the local civil defense program, a proposed sewage disposal improvement project, and the effect on the city of a proposed State law relating to taxation.

RADIO AND MOVIES. Twenty cities, or only one-seventh of those which replied to the Association's questionnaire, indicated the use of radio or television in reporting to the public during 1951. This is an unfortunate decrease from 1950 when every fourth city used one of these media. Four other cities which did not participate in the Association survey are known to have sponsored radio broadcasts during the year, however.

Ten cities reported the presentation of weekly or bi-weekly broadcasts of an informational type, while nine other cities conducted regular broadcasts of city council meetings. Pueblo, Colorado, did all three, conducting both weekly and bi-weekly programs and also broadcasting council proceedings. The bi-weekly program is unique in that it is presented in Spanish by a linguistically-talented city manager, and the council broadcasts also apparently are unique in being made direct from the council chamber during meetings. In most other cases the council proceedings are tape-recorded and then broadcast after editing to fit the allotted time schedule.

Most of the weekly programs are of 15-minute duration and consist of talks or interviews participated in by the chief executive and department heads. Persons appearing in weekly broadcasts with the city manager of Council Bluffs, Iowa, included subordinate employees as well as department heads, and also representatives of the county government and various business and professional groups in the city.

Several cities which do not carry on regularly scheduled radio broadcasts nevertheless employed radio on various occasions to inform citizens during the year. The city manager in Hartford, Connecticut, for example, made brief recordings on current city issues from time to time which were broadcast by local stations as their schedule permits. Arrangements were made in the same city for civil defense officials to broadcast information about their program and appeals for volunteer workers. Dayton, Ohio, conducted a special radio program on local recreation activities and another pertaining to the breaking of ground for a new water treatment plant. Photographs of the latter ceremony were made by the city and used by a television studio which could not set up its facilities at the scene.

Five other cities took advantage of television as a reporting medium during the year, three of them—St. Paul, Minnesota; Toledo, Ohio, and Milwaukee, Wisconsin—conducting regular weekly programs. The Toledo program ran for 15 minutes under the title "Your City Reports" and featured plans for a new health center, welfare department operation, work of the housing commission, and various other municipal activities. In Milwaukee the TV programs were handled by a special committee of the council, and local officials endeavored to obtain a special educational channel for the city.

The use of motion pictures, like that of radio, decreased in 1951 from the previous year, only 11 cities having utilized this reporting vehicle as compared with 16 in 1950. Outstanding use of this medium was made by several cities, however. San Mateo, California, and Eugene, Oregon, each produced a 45-minute sound movie in color, while Burbank, California, made a similar picture of 35-minutes duration and Philadelphia, Pennsylvania, produced two 15-minute sound and color films.

Entitled "Your City in Action," the San Mateo production was filmed by a local camera club and narrated by a local business man from script prepared by the city. Presenting views of administrative activity in city hall as well as field operations of line departments, the picture, which cost the city $810, was shown to numerous civic clubs and school groups. Similar subject matter appears in the Eugene film story of "A Budget in Action" which was made at a cost of $ 900 by city employees with some professional assistance. A tape-recorded commentary includes light background music. Over 8,000 citizens saw the Burbank picture within three months after its completion. Also featuring musical background, it is entitled "The Story of a City" and depicts all phases of city government operations.

Two other cities—Baltimore, Maryland, and Kansas City, Missouri—also produced movies during the year, and Dayton, Ohio, made successful use of both color and noncolor slides for public information purposes. The Kansas City film, depicting the local water supply system, was shown in Paris at a meeting of the World Health Organization, while the Baltimore production is an unrehearsed movie of street department operations and is used largely for training of department employees. San Diego, California, produced a film during the year for use in the local civil defense program, while University City, Missouri, utilized a commercial movie for the same purpose.

OTHER REPORTING MEDIA. The printed and spoken word was supplemented in many cities during 1951 by various other means of arousing citizen interest in government and informing the public about municipal activities. Most popular of these supplementary method was the so-called "open house," utilized by 10 cities, two of which indicated that this is an annual practice. Richland, Washington, for example, each year issues a general invitation to the public to visit the local library, community house, and police and fire headquarters. Other cities conducted open house in 1951 for the first time or in connection with some special occasion. Dayton, Ohio, for example, held a three-day open house in all departments, including actual life-net exercises by firemen, and plans to repeat the event another year, while Stratford, Connecticut, reported good success with an open house sponsored by the Junior Chamber of Commerce, who even furnished bus transportation for visitors to the municipal offices.

The first open house in Escanaba, Michigan, featured a parade of city-owned equipment. A new filtration plant in Statesville, North Carolina, a new fire station in San Jose, California, a remodeled police station in Pittsburg, Kansas, and newly installed equipment in the electric plant of Hearne, Texas, were the occasion for an open house in those cities, while University City, Missouri, invited citizens to city offices to learn the effect on municipal services of a proposed major bond issue.

Another effective means of arousing citizen interest in local government, which appeared to be neglected generally in 1951, was that of arranging for high school students to participate in municipal operations for a day during the year. Four cities took advantage of this device, Taunton, Massachusetts, and Escanaba, Michigan, reporting it as an annual custom, while Kissimmee, Florida, intelligently supplemented the program with an essay contest in which the participating students stated what they had learned and made suggestions for improvements.

The advantages of audience participation were achieved by several other means employed by city officials during the year. Hayward, California, and Windsor, Connecticut, prepared displays for commercial exhibits sponsored by local civic groups, while Dearborn, Michigan, enclosed with its tax bills a self-addressed form on which citizens could make complaints or suggestions for improved city services. Citizens attending council meetings in Birmingham, Michigan, and Salem, Oregon, were able to understand the proceedings more easily by virtue of receiving upon arrival printed copies of the agenda and information about council members and city problems.

Residents of newly-annexed areas constituted a special type of audience to which several cities addressed messages during 1951. Anoka, Minnesota, mailed a statement to new residents describing the local government and its services and urging their participation in its affairs, while a similar message was distributed by firemen to homes in an area annexed to Phoenix, Arizona. Wayne, Michigan, also used this means of welcoming and informing new citizens. Pending bond issues for public improvements also evoked special efforts to inform citizens through unusual methods in 1951. A 10-page booklet was prepared by Griffin, Georgia, to provide complete details about the financing and the effect on services of proposed major water supply and sewage disposal improvements, while Columbia, South Carolina, encouraged its citizens to request a bond issue referendum, as required by law, by enclosing a stamped return post card with a two-color leaflet describing six major projects recommended by the local planning commission. Miami Beach, Florida, used direct mail, radio, and public appearances of municipal officials to assure a turnout of the statutory minimum of 50 per cent of the voters in a local referendum.

Cities Issuing Reports in 1951. General annual municipal reports are known to have been issued in 1951 by the 147 cities listed below. The list is presented alphabetically by states within population groups:

Cities over 100,000: Arlington County, Norfolk, and Richmond, Virginia; Austin, Texas; Cambridge, Massachusetts; Cincinnati, Cleveland, and Dayton, Ohio; Des Moines, Iowa; Grand Rapids, Michigan; Hartford, Connecticut; Kansas City, Missouri; Milwaukee, Wisconsin; Montgomery County, Maryland; New Orleans, Louisiana; Newark, New Jersey; San Diego, California; Wichita, Kansas; Wilmington, Delaware; and Yonkers, New York.

Cities 50,000 to 100,000: Alameda and Burbank, California; Columbus, Georgia; Dearborn, Pontiac, and Saginaw, Michigan; Durham, North Carolina; Henrico County, Virginia; Pueblo, Colorado; and Schenectady, New York.

Cities 25,000 to 50,000: Albany, Georgia; Bangor and Lewiston, Maine; Burlington, Vermont; Council Bluffs and Mason City, Iowa; East Cleveland, Ohio; East Hartford, Greenwich, and Stratford, Connecticut; Eau Claire, Wisconsin; Hutchinson, Kansas; Jamestown, New York; Johnson City, Tennessee; Lower Merion tp., Pennsylvania; Lynchburg, Virginia; Muskegon and Royal Oak, Michigan; Palo Alto, California; Taunton, Massachusetts; Temple, Texas; and University City, Missouri.

Cities 10,000 to 25,000: Albert Lea, Minnesota; Anchorage, Alaksa; Atchison, Junction City, Pittsburg, and Salina, Kansas; Auburn, Bath, and Brunswick, Maine; Bennington, Vermont; Berkley, Escanaba, Grosse Pointe Park, Marquette, and Midland, Michigan; Bryan, Edinburg, and Marshall, Texas; Cheltenham tp. and Pottstown, Pennsylvania; Chico, Hayward, Menlo Park, and Merced, California; Claremont, Dover, and Keene, New Hampshire; Danvers, Middleborough, and Milford, Massachusetts; Fredericksburg, Virginia; Fort Thomas, Kentucky; Garden City and Rockville Centre, New York; Ironton, Ohio; Medford, Oregon; Pullman and Richland, Washington; Scottsbluff, Nebraska; Statesville, North Carolina; Sumter, South Carolina; Thomasville, Georgia; and Windsor, Connecticut.

Cities 5,000 to 10,000: Alliance, Lexington, and McCook, Nebraksa; Bennington village, Vermont; Alma, Manistee, and Wayne, Michigan; Camden, South Carolina; Colorado City, Texas; Columbia Heights and Hopkins, Minnesota; Derry, New Hampshire; Ellensburg, Washington; Farmington and Rockville, Connecticut; Glencoe, Glenview and Hinsdale, Illinois; Glendale, Arizona; Grants Pass, Oregon; Grenada, Mississippi; Hartford, Rockingham, St. Johnsbury town and village, and Springfield town, Vermont; Houlton, Rockland, and Rumford, Maine; Lebanon and Marshall, Missouri; Mooresville, North Carolina; Mountain Brook, Alabama; Quakertown, Pennsylvania; Salem, Virginia; Sunnyvale and Woodland, California; and Westminster, Maryland.

Cities under 5,000: Bellows Falls and Middlebury town and village, Vermont; Bridgeton, Bucksport, Madawaska, South Berwick, and Wells, Maine; Fillmore, California; Hearne, Texas; Kissimee, Florida; Marysville, Norway, and St. Johns, Michigan; Oglesby, Illinois; Smyrna, Delaware; Sunnyside, Washington; and Wayzata, Minnesota.

Council-Manager Government

SEVENTY-ONE places were added in 1951 to the number of local governments operating under the council manager plan. Of these, 47 adopted the plan by home rule charter or under optional state laws, 10 by ordinance, and 14 adopted the plan in previous years. Four cities abandoned the council-manager plan in 1951 and four other cities were removed from the directory making a net gain of 63. This compares with a net gain of 66 cities in 1950 and 60 in 1949. During the 11-year period, 1940 to 1950, the average number of adoptions per year was 47. The total number of places with the council-manager plan on March 1, 1952, was 1,083.

The 47 places that adopted the plan by charter or by state enabling act in 1951 are: Arcadia (23,066), Modesto (17,389), and Santa Clara (11,702), California; Englewood (16,869) and Florence (2,773), Colorado; Norwich, Connecticut (23,429); Vero Beach, Florida (4,746); Mount Vernon, Illinois (15,600); Augusta, Kansas (4,483); Maysville (8,632) and Owensboro (33,651), Kentucky; Levant (706) and Oxford (1,569), Maine; Farmington (2,325), Marine City (4,270), and St. Clair Shores (19,823), Michigan; Granite Falls (2,511) and North St. Paul (4,248), Minnesota; Rome, New York (41,682); Black Mountain (1,174), Laurinburg (7,134), and Washington (9,698), North Carolina; Delaware, Ohio (11,804); Crescent (1,341) and Waurika (2,327), Oklahoma; Marple township (Broomall), Pennsylvania (4,779); Greenville, South Carolina (58,161); Hot Springs (5,030) and Madison (5,153), South Dakota; Atwood (578) and Savannah (1,698), Tennessee; Andrews (3,294), Aransas Pass (5,396), Beeville (9,348), Childress (7,619), Garland (10,571), Graham (6,742), Kingsville (16,898), Perryton (4,417), and San Antonio (448,402), Texas; Ogden, Utah (57,112); Poultney town (2,936) and Poultney village (1,684), Vermont; Port Angeles, Washington (11,233); Marinette, Wisconsin (14,178); and Sarnia, Ontario, (31,239), and Halifax, Nova Scotia (100,000), Canada.

The 10 municipalities that adopted council-manager ordinances during 1951 are: San Bruno (12,478) and Yuba City (7,861), California; Aurora, Colorado (11,396); La Grange, Illinois (12,002); Fremont (3,056) and Harper Woods (9,029), Michigan; Martinsburg (1,562), Penn township (Allegheny County) (25,280), and Tarentum (9,540), Pennsylvania; and Cedar City, Utah (6,172).

Voters in 27 cities during 1951 rejected proposals to adopt council-manager government: Brawley, California (11,922); New Castle, Delaware (5,396); Hialeah, Florida (19,676); Burlington (30,613) and Grinnell (6,867), Iowa; Elwood, Kansas (1,020); Hermon (1,728) and Millinocket (5,755), Maine; Amherst (7,900), Lynn (99,738), Nahant (2,679), Stoneham (13,229), and Swampscott (11,580), Massachusetts; Berrien Springs, Michigan (1,761); St. Charles, Missouri (14,314); Gering, Nebraska (3,842); Gorham, New Hampshire (1,739); Maywood (8,667) and Montclair (43,927), New Jersey; Albemarle, North Carolina (11,798); Hominy, Oklahoma (2,702); Lewisburg, Tennessee (5,164); Rutland, Vermont (17,659); Kirkland (4,713) and Omak (3,791), Washington; Green Bay, Wisconsin (52,735); and Casper, Wyoming (23,673).

Of the 74 referendums held in 1951, 47, or 63 per cent, resulted in adoption of council-manager government by vote of the people or receipt of charter by action of the state legislature. This compares with a 69 per cent favorable action in 1950, 60 per cent in 1949, and 58 per cent in 1948.

Other Changes in Directory. Fourteen cities that had adopted the plan in previous years were added to the directory in 1951. Ten of the cities had adopted the plan by ordinance: Anaheim (14,556), Culver City (19,720), Inglewood (46,185), Martinez (8,268), Oceanside (12,881), Pomona (35,405), San Gabriel (20,343), and Ukiah (6,120), California; and Ross (15,759) and Shaler townships (16,480), Pennsylvania. Four cities had adopted a charter or state enabling act: Smyrna, Delaware (2,346); Bowdoinham, Maine (1,033); Cornelius, Oregon (998); and Lockhart, Texas (5,531).

Four cities were removed from the directory in 1951 for various reasons: Brewton, Alabama, because the city manager position had been vacant for more than a year; Somerville, Massachusetts, because of a court decision which arbitrarily held that the adoption of Plan E (council-manager plan with proportional representation) was invalid because the legislature removed PR from the law before it was submitted to the voters; St. Albans, Maine, because it was erroneously classified as a council-manager town (it operates under the town agent plan); and Waycross, Georgia, because for more than a year a member of the city commission has been acting as city manager.

Cities Voting on Abandonment. Fifteen cities held referenda during 1951 on the continuation of the council-manager plan. Voters in four of the 15 places decided to abandon it: Brooks, Maine (744); Dover (15,874) and Keene (15,638), New Hampshire; and Montpelier, Vermont (8,599). The 11 places that voted in 1951 to retain the plan are: South Berwick (1,701) and Wilton (1,910), Maine; Moberly, Missouri (13,015); Lancaster, New Hampshire (2,295); Dunn (6,316) and Fayetteville (34,715), North Carolina; Konawa, Oklahoma (2,707); Paris, Tennessee (8,826); Bennington, Vermont (12,411); and Eau Claire (36,058) and Fort Atkinson (6,280), Wisconsin. The four abandonments in 1951 make a total of 46 cities and counties where the people have voted out the council-manager plan, excluding eight places where the plan has been readopted.[1]

Legislation. The Illinois law which enables any municipality except Chicago to adopt the council-manager plan was probably the most important manager legislation in 1951. Arizona authorized any city or town to create the office of city manager by ordinance and to define his duties. Nevada permitted the governing boards of counties with populations of more than 10,000 to adopt the county-manager plan by ordinance (Chapter 221). In three states—Connecticut, Georgia, and Rhode Island—laws were enacted to enable cities and towns to adopt home rule charters.

TABLE 1

PERCENTAGE OF COUNCIL-MANAGER CITIES TO TOTAL CITIES IN UNITED STATES

Population Group	Total No. of Cities in Group*	Cities with Council-Manager Plan† No.	Per Cent
1,000 to 2,500	3,408	82	2.4
2,500 to 5,000	1,557	146	9.4
5,000 to 10,000	1,093	228	20.9
10,000 to 25,000	752	245	32.6
25,000 to 50,000	249	94	37.7
50,000 to 100,000	126	50	39.6
100,000 to 500,000	88	30	34.1
Over 500,000	18	1	5.6

*This column includes only places in continental United States that are classified as incorporated urban places by the United States Bureau of the Census in U.S. Census of Population, 1950, Vol. I Summary.

†A total of 207 local governments which have the council-manager plan are omitted from this column because they are not classified by the Bureau of the Census as incorporated urban places or because they are outside the continental United States. These 207 places include 18 places of less than 1,000 population; 17 counties; 132 towns and townships in the New England states, New Jersey, and Pennsylvania; three cities in Alaska; one city in Puerto Rico; and 36 cities in Canada.

---

[1] The 42 other places which have abandoned the council-manager plan by vote of the people since 1908 are: Hot Springs, Arkansas; Santa Barbara, California; Fort Myers, St. Cloud, and Tampa, Florida; Mason City, Iowa; Orient, Maine; Fall River, Orange, and Waltham, Massachusetts; Albion, Michigan; Bethlehem, Conway, Franklin, and Littleton, New Hampshire; Cape May and Trenton, New Jersey; Binghamton, New York; Akron, Ashtabula, Cleveland, and Lima, Ohio; Collinsville, Durant, Lawton, and Sulphur, Oklahoma; Cottage Grove, Oregon; Aberdeen and Huron, South Dakota; Denton and Houston, Texas; Brandon, Cavendish, Hardwick village, Ludlow town and village, and St. Albans, Vermont; Madison, Rhinelander, and Stevens Point, Wisconsin; Brandon, Manitoba, and St. Jerome, Quebec, Canada. For more details on abandonments see Arthur W. Bromage, "Manager Plan Abandonments" (National Municipal League, 1949). Eight places which abandoned the plan some years ago have since readopted it: San Mateo County, California; Ashland, Kentucky; Madison, South Dakota; Bennington town and village, and Brattleboro, Vermont; and Gainesville and Waco, Texas.

Colorado clarified the procedure for the adoption of the council-manager plan, and Iowa completely recodified its council-manager government law and exempted the city manager and his administrative assistants from civil service. Oklahoma amended its enabling act to permit any town of 1,000 or more population to vote to become a city under either the council-manager or the mayor-council forms. Tennessee passed a law to facilitate holding of referendums on the abandonment of the council-manager plan. Several states, notably Delaware, Massachusetts, and South Carolina, passed special charters providing the council-manager plan for several cities and towns.

Kansas amended one of its council-manager laws to assign to the manager the appointment and removal of all nonelective heads of departments, officers, and employees of the city. The manager also was made responsible for the enforcement of laws and ordinances. North Dakota, on the other hand, curtailed the city manager's authority by vesting the governing body with power to rearrange the duties of appointive positions and by requiring the manager to consult with the council before appointment or removal of department heads.

Several home rule bills pending in Congress at the end of the year provided the council-manager plan for the District of Columbia but no action was taken.

Unofficial Cities. Several cities and counties in 1951 provided for the appointment of administrators whose powers and duties are too circumscribed to qualify these places as having the council-manager plan. Philadelphia, for example, adopted a new charter providing for a managing director appointed by the mayor and who in turn appoints many of the department heads. Likewise, a number of places in California, including Orange, Santa Ana, Ojai, Piedmont, and Contra Costa County, adopted ordinances creating the position of administrative officer. Cities and towns that have adopted such modified manager plans are not included in the council-manager directory.

Growth of the Plan. A total of 1,083 places had adopted the council-manager plan as of March 1, 1952, and are included in the directory of council-manager cities and counties. Of this total number, 1,043 are in the continental United States, three in Alaska, one in Puerto Rico, and 36 in Canada. This total includes nine places which were added to the list early in 1952.

The number of local governments that now have the council-manager plan is more than double the 517 places operating under the plan at the end of 1940 and considerably in excess of the 634 places that had the plan at the end of 1945. This reflects the large number of adoptions during the six years, 1946 through 1951.

Maine with 110 places under the council-manager plan leads all other states, followed by California with 96 council-manager cities and counties, Texas with 91, Michigan with 84, and Virginia with 63. The population of all places operating under the council-manager plan now totals more than 23,000,000, according to the 1950 census.

The first council-manager charter was adopted by popular vote 40 years ago.[2] Now more than one-third (36.2 per cent) of all cities in the United States over 25,000 have council-manager government, and 32.6 per cent of the cities between 10,000 and 25,000 have this form of government (see Table 1). There are more council-manager than mayor-council or commission-governed cities in the 50,000-to-100,000 population group and in the 250,000-to-500,000 group.

The 17 counties that have the county manager plan are Sacramento, San Mateo, and Santa Clara Counties, California; Fulton County, Georgia; Anne Arundel and Montgomery Counties, Maryland; Petroleum County, Montana; Monroe County, New York; Durham and Guilford Counties, North Carolina; McMinn County, Tennessee; and Albemarle, Arlington, Elizabeth City, Fairfax, Henrico, and Warwick Counties, Virginia.

Studies and Reports. The Institute of Local Government at the University of Pittsburgh, on the basis of a study of the operation of the manager plan in that state, prepared a suggested model ordinance for use by boroughs and townships adopting the council-manager plan. In California the Haynes Foundation inaugurated a study of the council-manager plan in that state. The Institute of Public Administration at the University of Michigan published a report entitled "A Factual Analysis of the Administrative Organization of Council-Manager Cities in Michigan."

Among the publications issued by the National Municipal League in 1951 was the Digest of County Manager Charters and Laws and revised editions of two pamphlets, one entitled Story of the Council-Manager Plan and the other Facts About the Council-Manager Plan. A number of other reports on the council-manager plan issued in 1951 are listed under "new books and pamphlets" at the end of this section of the 1952 Municipal Year Book.

---

[2] The council-manager plan was originally devised and promoted by the National Short Ballot Organization, of which Woodrow Wilson was president and Richard S. Childs was secretary, as a part of its effort to make government more responsible by reducing the number of elective offices. This organization had been promoting the commission plan, but when Mr. Childs read of the success of a "general manager" in Staunton, Virginia, in 1908-11 under a mayor and bicameral council, he argued that the concentration of administrative authority in such an appointive official under a single commission would remedy the weaknesses of the commission plan. The Short Ballot Organization drafted a charter for Lockport, New York, in 1911, but the first city to adopt its "commission-manager" or council-manager plan by vote of the people was Sumter, South Carolina, in 1912, and the first large city to do so was Dayton, Ohio, which put the plan into effect in 1914. In the meantime the National Municipal League, which since 1900 had recommended the strong mayor plan, at its 1913 conference received from its committee on commission government a report favorable to the council-manager plan. This committee, composed of Charles A. Beard, Ernest S. Bradford, Richard S. Childs, William Bennett Munro, and Clinton Rogers Woodruff, was influenced largely by the Lockport plan and by Mr. Childs. Accordingly, the League's model city charter was revised in 1915 to incorporate the council-manager plan, and ever since then the League has promoted the adoption of this form of local government.

Sources of Information: General

Sources of Statistics: General

U. S. Bureau of the Census. Cities Supplement — Statistical Abstract of the United States. Government Printing Office, Washington, D.C. September, 1944, 47pp. 15 cents. Contains selected data for cities having population over 25,000 in 1940, including estimated population on November 1, 1943, and per cent change from 1940; detailed information concerning housing, including number of dwelling units and average monthly rent; typical net monthly electric bills; permits issued for new construction in 1942; vital statistics; detailed revenue, expenditure, and debt data for 1942; expenditure for education, number of teachers, enrollment, etc; number of employed persons with breakdown by industry groups; data on manufacturing, retail, and service establishments; number of registered voters in 1942; data on climate.

--County Data Book Supplement — Statistical Abstract of the United States. Government Printing Office, Washington 25, D.C. 1947. 431pp. $2.57. Contains tables showing selected social and economic facts for each county in the United States; summarizes data for each of 138 metropolitan areas made up of whole counties; shows totals for each State and the United States; indicates comparable items in Cities Supplement and County Data Book.

--Historical Statistics of the United States, 1789-1945, a Supplement to the Statistical Abstract of the United States. Government Printing Office, Washington 25, D.C. 1949. 363pp. $2.50. Chapter P. Government. Gives statistics on state and local finances, some series back to 1890 and others from 1900. These figures are continued in the Annual issue of the Statistical Abstract beginning with the issue of 1949.

--Governmental Units Overlying City Areas. 1947. 55pp. Contains information on the number of local government units overlying the 397 cities over 25,000, by state, by city population-size group, and by region; distribution of the 397 cities according to selected intergovernmental characteristics; distribution according to responsibility for selected functions, by function and city population-size group; governments other than city corporations responsible for selected local functions within the 397 cities, by city.

--Checklist of Basic Municipal Documents (State and Local Government Special Studies Number 27). Government Printing Office, Washington 25, D.C. 1948. 92pp. 35 cents. Lists alphabetically by city over 2,000 currently-issued official serial publications and selected basic documents — including charters, codes, manuals, and comprehensive city plans — of the 92 cities having 1940 population over 100,000; also contains a subject index to city source materials listed.

--The Growth of Metropolitan Districts in the United States: 1900-1940. By Warren S. Thompson. Government Printing Office, Washington 25, D.C. 1948. 61pp. 30 cents.

--Key to Published and Tabulated Data for Small Areas. Government Printing Office, Washington, D.C. 1951. 50pp. An index to data in the 1950 census of population and housing for small areas (blocks, wards, and minor civil divisions but also including urban places and standard metropolitan districts).

Planning and Zoning

Developments in 1951

By Howard K. Menhinick

Regents' Professor of City Planning, Georgia Institute of Technology

DEFENSE programs determined the direction and emphasis of many of the planning activities of the year. Although civil defense did not get rolling and the goals for the activation of defense plants and the dispersal of developing industries were not achieved as rapidly nor as completely as desired, these activities created new and accentuated old urban planning and development problems in 1951.

The federal policy of industrial dispersal, promulgated by President Truman on August 10, 1951, had as its goal the deployment of new and expanding industries on satisfactory outlying industrial sites which would provide reasonable military security. For a number of years many industrial plants have been seeking suburban locations in order to obtain space for modern, one-story industrial structures, parking facilities, and other advantages of an outlying site.

Decentralized Industrial Site Identification. City, county, and regional planning commissions were called upon to help find satisfactory decentralized industrial sites. Many cities, not wishing to lose potential tax base, showed no great interest in finding sites outside their existing jurisdictions. Here was an obvious need for planning on a regional metropolitan basis and there were all too few metropolitan planning agencies with going programs. One of these, the Metropolitan Planning Commission of Atlanta, initiated during the year a major investigation of regional industrial sites.

Similar analyses were completed in 1951 for Baltimore and its five surrounding counties, and for the San Francisco Bay area. Industrial dispersal studies were undertaken in the Seattle, Detroit, and greater Kansas City region and for the four counties of the Pittsburgh district.

The National Security Resources Board reports that 30 of the country's metropolitan areas with 40,000 or more manufacturing employees have been active in studies of industrial dispersion during the latter half of 1951. Twelve have already completed maps and other materials showing dispersed and other industrial sites in their areas. In addition 14 industrial cities of smaller size have either organized study committees or are in process of doing so. From the standpoint of city and regional planning perhaps the greatest significance of this activity is that it is inducing cities to look at their development on a metropolitan basis.

The "task forces" that are being organized to prepare industrial dispersal plans generally represent the central city and the surrounding towns and counties and contain representatives of the chamber of commerce, planning commissions, labor organizations, and others. They may well prove to be the forerunners of regional planning and development organizations which are thinking in terms of the entire urban community rather than the particular part falling within the limits of one city.

The Housing and Home Finance Agency initiated research projects being carried out by the University of North Carolina and the University of Pennsylvania to measure the effects on surrounding areas of the new AEC plant on the Savannah River in South Carolina and the United States Steel Company's Works near Morrisville, Pennsylvania. The findings should prove useful in the solution of urban problems in the ever-growing list of communities certified as critical defense areas.

Problems of Urban Fringe Development. It is estimated that in 1951 more than six million loads of household goods were moved by truck carriers across state lines to establish a new record. Increased defense activities and dispersed industries are said to account for a major portion of this migration. The stimulus to urban fringe development, with its problems of required streets and transportation facilities, housing, water supply and sanitation, schools and recreation, police and fire protection, has been tremendous. Thus a movement which began with the advent of the automobile, as urban dwellers sought escape in the countryside from urban congestion and taxation, in 1951 assumed increasingly major proportions. The attention given by cities to this basic urban development problem took a variety of forms.

The well-established device of land subdivision regulation beyond the city limits continued in full force. It was seriously challenged only in Texas. Here the extra-territorial control powers of cities were thrown out by the courts on a technicality. The state legislature promptly passed an amending act which restored to Texas cities their powers to control land-subdivision development within their limits and for a distance of five miles beyond. New or additional powers to control land subdivision were given to municipalities in Indiana, Pennsylvania, and Wisconsin.

Another attack on the problem of urban fringe development was the merging of city and county planning functions. This was accomplished frequently on a voluntary basis as in the Milwaukee, Wisconsin, area and, in the state of Washington in the Spokane, Wenatchee, Vancouver, Seattle, and Walla Walla areas, and in the three southeastern counties of Columbia, Asotin, and Garfield.

In an increasing number of regions, official agencies are being established for city-county planning collaboration, as at Boulder, Colorado, the Pennsylvania portion of the Philadelphia area (including Bucks County in which United States Steel is building its huge Fairless Works), and the 28-1/2 square miles of territory surrounding the city of Regina (under a recent amendment to the Community Planning Act of 1945 of the Province of Saskatchewan).

The year 1951 is marked by at least two significant studies of metropolitan government: the final report of the Committee on Metropolitan Problems of the Civic Advisory Council of Toronto, recommending governmental action with respect to the 23 municipalities within the present metropolitan area of Toronto; and authorization for the creation in Tennessee of a Community Services Commission for Nashville and Davidson County to study and present recommendations for the provision and financing of the services of the local governments involved.

Metropolitan unification, predicted and urged by Thomas H. Reed at the 1950 National Municipal League Conference, was partially realized at the end of 1951 in the activated Plan of Improvement for Atlanta and Fulton County, Georgia. Under this plan the city of Atlanta has trebled its area to 118 square miles and added approximately 100,000 new citizens. Of equal significance with the territorial expansion is the reduction in the hodge podge of duplicating local governmental services and the functional consolidations achieved. The former city and county planning commissions are merged, and in general the city takes over the job of providing municipal services while the county continues such traditional services as courts and health and welfare.

Through state legislation, annexation procedures have been eased in Alaska, Georgia, Oregon, Washington, and Wisconsin, made more orderly in California and Michigan, and restricted in North Dakota.

Preserving the Central City. While concerning themselves with the urban-fringe problems created by migration to the suburbs, cities have not been unmindful of the effects of this migration upon their own economy and development. To the extent that they are able to remake themselves into desirable places in which to live and do business, cities may retard the outward migration of their citizens. In this endeavor, programs for urban redevelopment and public housing and the solution of highway and parking problems played a significant role in 1951.

New urban redevelopment legislation was enacted in Delaware, Kansas, Maine, Missouri, Nebraska, North Carolina, and West Virginia. Broadened authority was granted in Indiana and New Jersey. Urban redevelopment laws were upheld by the state supreme courts in Alabama and Tennessee.

Reports on urban redevelopment were presented in 1951 in cities too numerous to list. Although most of the urban redevelopment was for residential purposes, there were projects which contemplated, primarily, business and industrial uses.

The Housing and Home Finance Agency reports that through November, 1951, 232 urban redevelopment capital grant reservations outstanding totaled $180,359,213, with an addition during the first 11 months of the year of 41 reservations totaling $10,586,470.

In the field of public housing legislative and legal progress marks the year 1951. New or greater conformity to federal housing legislation emerged in six states.

The Public Housing Administration reports that approximately 800 local housing authorities in more than one thousand localities are participating in the low-rent public housing program. A total of 210,000 completed low-rent dwellings are presently contained in the program administered by PHA.

Another device to keep central districts of cities livable and accessible was the provision of downtown parking facilities and the improvement of urban highways. A number of cities built publicly owned downtown parking garages and lots. It is not surprising that the development of these facilities as a public function has been challenged in the courts. Their legality was upheld in 1951 by the state supreme courts of Illinois (Kankakee), Missouri (Kansas City), Ohio (Columbus), and Pennsylvania (Pittsburgh). A current statement on this subject is a paper from the Bureau of Public Roads on "Parking Facilities as Public Utilities." Among the cities presenting reports on parking were Cambridge, Massachusetts; Cleveland, Ohio; Ft. Wayne, Indiana; Providence, Rhode Island; and Flint, Michigan. Requirements for off-street parking spaces in connection with new building construction have been incorporated in a number of new and amended zoning ordinances.

Major street plans were prepared by Durham, North Carolina; Miami, Florida; Norfolk and Richmond, Virginia; Kalamazoo, Michigan; and Corvallis and Oregon City, Oregon. Special attention was given to trucking operations in Charlotte, North Carolina, and Chicago, Illinois. A new section of an expressway was opened in Atlanta. Express highways and toll roads received special attention in a Brookings Institution report and in reports prepared by Philadelphia, Cleveland, and Kansas City. The Highway Research Board of the Bureau of Public Roads started an important study of methods of reserving lands for highway purposes prior to their acquisition.

Planning Education. With planning programs steadily increasing in number and scope, the shortage of qualified planners, particularly in the middle and upper brackets, became more acute. For example, in the Philadelphia region alone there were 12 agencies seeking additional planning personnel at the end of 1951. It is therefore noteworthy that two new professional city planning education programs were initiated during the year. The University of Pennsylvania created a Department of Land and City Planning in its School of Fine Arts, offering both a Bachelor and Master's degree in planning. Georgia Institute of Technology established in its School of Architecture a two-year graduate curriculum in city planning leading to the degree of Master of City Planning.

A field study of the status of planning education in the United States was launched in 1951 under the auspices of the American Institute of Planners and the Bettman Foundation. An Urban Studies Institute at the University of Pennsylvania, an Inter-America Housing Research and Training Center under the administration of the Pan American Union, and the development of the housing and town planning section of the Social Affairs Department of the United Nations were other research and education developments of interest.

State Planning. State planning agencies had active and varied programs in 1951. Many were concerned with the identification of industrial locations for new and expanding defense industries. New Jersey presented a master plan for the state—one of the first comprehensive development plans for an entire state. Included are recommendations on highways, airports, water supply sources, recreation, institutions, and many other elements of state development. Other state planning board studies reported upon during the year include the resources, people, and institutions of Missouri, an economic survey of California, transportation in Virginia, and a long-term capital improvement program for Maryland.

Technical planning assistance for local communities became an increasingly important part of state planning programs. A proposal to cut in half the appropriation of the Tennessee State Planning Commission was soundly defeated after the director explained the program and ten or twelve House members voluntarily testified to the value of the assistance given by the state planning commission to their respective communities. It is significant that in Tennessee in 1951 approximately 100 official local planning commissions carried on active programs. At least two state planning commissions launched monthly bulletins during the year: "Pennsylvania Plans" and "Agricultural and Industrial Development Board News" (Kentucky).

County Planning. County planning continued to expand with the creation of new county planning agencies and the broadening of the programs of existing ones. Oregon now has six in Lane, Washington, Klamath, Wasco, Multnomah, and Benton counties. Significant economic studies were completed in a number of counties including Placer and Mendocina in California, with special attention to industrial development in Baltimore County, Maryland, and in Burlington County, New Jersey.

City Planning. City planning likewise was on the increase. New commissions were established, dormant commissions reactivated, budgets increased, and staffs and programs enlarged. During the year general planning reports were presented in numerous cities, including Modesto, California; Marquette, Michigan; Lincoln, Nebraska; Goldsboro, North Carolina; and Salina, Kansas. Comprehensive or partial master plan reports were likewise published by a number of cities including Bangor, Maine; Clinton, Tennessee; Detroit, Michigan; Washington, D.C.; Richmond, Virginia; Wabash, Indiana; and Jersey City, New Jersey.

Those cities which have continued to prepare and keep up to date capital improvement programs are proceeding in an orderly, business-like manner. In addition, they have a first-line defense against a possible future economic recession which Edwin G. Nourse, former chairman of the President's Council of Economic Advisers, warned about at the 1951 Pittsburgh National Planning Conference. Among the cities which reported on their capital improvement programs were San Diego, San Francisco, Milwaukee, Clinton (Tennessee), Providence, and Philadelphia.

The availability of state aid for public-works planning was extended in New York and the deadline for the repayment of Indiana's planning advances was deferred.

In the field of citizen participation in planning, two documents of special interest were published in 1951. One was an article in the September, 1951, issue of the American Political Science Review entitled "British Town and Country Planning: Local Participation." The other was a report on "Berkeley Neighborhoods," designed to encourage local community participation in the planning program. During the year the American Planning and Civic Association devoted increasing attention to programs of citizen action for community planning.

Other studies of special aspects of city planning were population analyses reported by New York City, Seattle, and Kalamazoo; studies of recreation in Houston and Harris County, Texas, Milwaukee, Wisconsin; and Sperry, Oklahoma; school plant studies in Roselle, New Jersey; Oshkosh, Wisconsin, and Cookeville, Tennessee; a transit and transportation study in San Francisco.

Zoning. Each year a substantial number of new cities bring to their citizens the protection of a new or modernized zoning ordinance. The year 1951 was no exception. Whether a zoning ordinance is new or long-established the functioning of the zoning board of appeals is likely to present difficult problems. In late 1950 Waukesha, Wisconsin, issued a helpful mimeographed explanation entitled "Your Board of Appeals." The Southern Association of State Planning and Development Agencies published "A Guide for Boards of Zoning Adjustment." More of these aids are needed.

New zoning techniques continue to be suggested and tried. Specially planned shopping districts with standards of space, design, and traffic organization were included in the zoning ordinances of Niagara Falls, New York; Valparaiso, Indiana; and Colorado Springs, Colorado. An outstanding contribution to zoning technique was a Pittsburgh National Planning Conference paper by Dennis O'Harrow on "Performance Standards in Industrial Zoning," which has been supplemented and reproduced as an American Society of Planning Officials Planning Advisory Service Information Report. "Principles of Industrial Zoning," prepared by the National Industrial Zoning Committee, is an excellent statement of 12 basic principles.

State legislation for zoning adopted during the year includes two particularly interesting provisions. North Carolina specified that buildings constructed by state and local governments must comply with local zoning regulations. Kansas provided for zoning within the unincorporated territory lying within three miles of any city of the first class which has established a city planning commission and had adopted a zoning ordinance. No regulations applying to the use of land for agricultural purposes are permitted.

The year 1951 was one of steady progress in planning and zoning with few serious setbacks. In a world facing the uncertainties of 1952, the tasks and opportunities that will confront the planner are unpredictable. Knowledge well organized, flexible plans, and an alertness to the needs of the hour are clearly required.

Professional Organization. The American Society of Planning Officials (1313 East 60 Street, Chicago) prepared a number of noteworthy special research reports for subscribers to the Society's Planning Advisory Service. A major contribution to zoning was the report dealing with performance standards in industrial zoning. Studies were published on community inducements to industry; the impact of large industries on small communities; annexation of urban fringe areas; capital improvement programming; the journey to work; the relation between employment and residence; zoning for group housing developments; television requirements and regulations; the regulation of storage, distribution, and use of propane and butane; signs and billboards; urban mapping and aerial photography; and forms used for zoning administration.

Two major bibliographies were issued, a 31-page selected bibliography on urban redevelopment and a 23-page bibliography on guides for community planning. A bibliography also was issued on motion picture films dealing with planning and housing, on annexation of fringe areas, and on the impact of defense industries on communities. The monthly Zoning Digest published by the Society reported 179 legal decisions in zoning handed down by state appellate courts throughout the country. Other reports issued included a revised directory of state planning and development agencies, a report on salaries, and a report on budgets of state planning and development agencies, and, of course, the monthly ASPO Newsletter.

City Planning, Zoning, and Subdivision Data

CITY planning data on organization, employees, expenditures, zoning, and land subdivision are shown in Table XI for 889 cities over 10,000 population as reported by city officials early in 1952. An additional 122 cities reported to the Year Book but are not shown in Table XI because these cities do not have any type of planning agency nor a zoning ordinance nor land subdivision regulations. The remaining 335 cities over 10,000 did not answer the Year Book questionnaire.[1]

TABLE 1

CITY PLANNING DATA FOR CITIES OVER 10,000: 1952

Population Group	No. of Cities in Table XI	Type of Planning Agency				Official Planning Agencies with:		
		No. of Cities Reporting	Official	Unofficial	None	Full-Time Employees	Part-Time Employees	Expenditures Over $1,000
Over 500,000	18	15	15	0	0	14	0	13
250,000 to 500,000	23	22	22	0	0	22	0	20
100,000 to 250,000	56	52	48	3	1	41	4	38
50,000 to 100,000	109	105	93	4	8	41	16	57
25,000 to 50,000	213	206	184	7	15	34	63	58
10,000 to 25,000	470	448	359	21	68	18	119	70
All cities over 10,000	889	848	721	35	92	170	202	256

Organization for Planning. Of the 889 cities in Table XI, 848 reported on their planning agencies with 721 having an official planning agency, 35 an unofficial planning agency or committee, and 92 having no planning agency (see Table 1). The number of members on city planning commissions ranges from one city with no appointive members (all members are ex officio) to one city with 35 appointive members. A total of 554 of 707 reporting cities have from five to nine members and a median membership of six.

The mayor and the city council predominately make the appointments to planning commissions in every population group—in 636 out of 692 report-

[1] Replies from seven cities shown in Table XI were received too late for inclusion in this summary: Miami, Fort Wayne, Tulsa, Philadelphia, Pittsburgh, Nashville, and San Antonio.

ing cities. In 34 cities the city manager makes the appointments, in 5 cities the public works director, and in 17 cities the planning commission members are directly elected by the people.

A total of 158 cities reported having a full-time planning director, with 73 of these cities over 100,000 population and 85 cities below 100,000. The 158 full-time planning directors are selected by the city planning commission in 57 cities, by the city manager in 47 cities, by the city council in 22 cities, by the mayor in 15 cities, and 16 cities did not report.

In addition to the 158 cities with full-time planning directors, 261 cities reported other city officials serving as planning director. In these 261 cities the city engineer serves as planning director in 73 cities, the city manager in 62 cities, the chairman of the planning commission in 48 cities, the mayor in 20 cities, the building inspector in 19 cities, and the public works director in 16 cities. In 23 cities other officials serve as planning director—secretaries to city planning commissions, city clerks, finance directors, and so forth.

The planning agency had one or more full-time employees in 170 cities; an additional 202 cities had at least one part-time employee with the planning agency. Seventy-seven of 92 cities over 100,000 population have one or more full-time employees while only 52 of 792 cities of less than 100,000 population have one or more full-time employees (see Table 1).

A total of 256 cities over 10,000 population indicated 1951 planning agency expenditures of $1,000 or more. By contrast, 191 cities over 10,000 population reported no municipal appropriations for city planning.

With the problems of many cities extending beyond corporate boundaries, interest has been shown in recent years in the formation of regional and city-county planning commissions. At least 20 of the cities shown in Table XI are known to operate under city-county planning boards. These cities are Tucson, Arizona; Napa, California; Boulder, Colorado; Atlanta and Augusta, Georgia; Rockford, Illinois; Marion, Indiana; Lexington and Louisville, Kentucky; Billings, Montana; Las Vegas and Reno, Nevada; Winston-Salem, North Carolina; Toledo, Ohio; Eugene and Springfield, Oregon; Chattanooga and Nashville, Tennessee; and Ogden and Provo, Utah. In addition to these city-county agencies, regional planning commissions have been established in the area of some of the larger cities. Examples of these agencies are the planning commissions for Hamilton County (Cincinnati), Ohio; Jefferson County (Birmingham), Alabama; and the Cleveland, Ohio, regional planning commission which serves most of the metropolitan area except the cities of Cleveland and Lakewood.

Zoning. A total of 756 out of 852 reporting cities in Table XI indicated that they had comprehensive zoning ordinances governing use, height, bulk, and area. Ninety per cent of the cities over 25,000 population have zoning ordinances compared with 72 per cent of the cities over 25,000 population that reported comprehensive zoning ordinances in the 1942 Municipal Year Book. A few cities shown as "No" for zoning ordinances in Table XI do have zoning ordinances, but they are not of the comprehensive type governing use, height, bulk, and area.

Many zoning ordinances have been revised during the past decade to take into account new kinds of land use such as drive-in restaurants and automobile tourist courts and the provision of off-street parking for commercial and residential construction. Each city was asked to report the year when its zoning ordinance was last completely or extensively revised, and 671 cities supplied this information for the Year Book. The trend towards modernization of zoning ordinances is shown by the fact that 276 cities have revised their ordinances between 1946 and 1950 and 103 cities in 1951 or early 1952. An additional 51 cities indicated that their zoning ordinances are now in process of extensive revision. The remaining cities reported that their zoning ordinances were last revised as follows: 14 cities between 1921 and 1925, 48 cities between 1926 and 1930, 24 cities between 1931 and 1935, 62 cities between 1936 and 1940, and 93 cities between 1941 and 1945. Fifteen cities over 100,000 population, however, have not revised zoning ordinances since 1930.

Table 2

Zoning Data for Cities Over 10,000: 1952

Population Group	No. Cities with Zoning Ordinances	Authority for Outside Zoning			Cities Requiring Off-Street Parking		
		City	County	None	Commercial	Truck Loading	Residential
Over 500,000	13	0	12	0	4	4	7
250,000 to 500,000	20	2	12	6	6	6	10
100,000 to 250,000	47	1	27	17	21	16	26
50,000 to 100,000	97	5	41	40	37	27	46
25,000 to 50,000	179	11	60	80	68	40	79
10,000 to 25,000	400	21	135	95	127	85	128
All cities over 10,000	756	40	287	238	263	178	296

The power of cities to control fringe area developments in unincorporated areas through zoning is a concept that has been gaining some acceptance in recent years. Table 2 shows the outside zoning powers possessed by cities that reported having zoning ordinances within the city limits. Of the 756 cities with zoning ordinances, 40 indicated powers to zone beyond the city limits for distances ranging from one-fourth of one mile to five miles, 287 cities indicated that they have no such power but that the county has a zoning ordinance, and 238 cities indicated that neither the city nor the county zones beyond the corporate limits of the city.

Of the 40 cities zoning beyond the city limits, one city indicated zoning extended one-fourth of one mile, one city indicated one and one-half miles, 10 cities one mile, six cities two miles, 13 cities three miles, and nine cities five miles.

An important element in many zoning ordinances is the requirement for newly constructed commercial and residential buildings to provide off-street parking space. The last three columns of Table 2 summarize the individual city data shown in Table XI on the number of cities that require, through zoning ordinances, the provision of three principal types of off-street parking. The first of these three columns show that 263 cities require off-street parking facilities for newly built theaters, stores, warehouses, hotels, and other commercial establishments. This figure can be compared with similar information on off-street parking for commercial establishments gathered for the 1949 Municipal Year Book. At that time only 81 cities over 10,000 population required this kind of off-street parking. The next column in Table 2 shows that 178 cities required, through zoning ordinances, that off-street truck loading facilities be provided for newly built theaters, stores, warehouses, hotels, and other commercial establishments. The last column shows that 296 cities require off-street parking for newly built houses and apartment buildings.

It is interesting to note that of 40 cities in Table XI over 250,000 population only 10 require off-street parking space and off-street truck loading facilities for commercial establishments, and only 17 require off-street parking for residential developments. Not all cities reported on off-street parking provisions, but of those that did, 526 indicated "no" on off-street parking for commercial buildings, 566 indicated "no" for off-street truck loading facilities for commercial buildings, and 481 cities indicated "no" for off-street parking for newly built houses and apartment buildings.

Land Subdivision. A total of 571 cities in Table XI indicated that they had comprehensive land-subdivision regulations governing lay out of streets, blocks, lots, and utilities in newly developed areas.

As was the case with zoning ordinances, many cities have completely or extensively revised subdivision regulations in recent years. A total of 195 cities have revised their regulations between 1946 and 1950 and 73 cities in 1951 or early 1952. An additional 19 cities indicated that their subdivision regulations are now in process of extensive revision. The remaining cities reported that their subdivision regulations were last revised as follows: eight cities between 1921 and 1925, 18 cities between 1926 and 1930, 14 cities between 1931 and 1935, 27 cities between 1936 and 1940, and 39 cities between 1941 and 1945. One city indicated that its last revision took place in 1907.

Table 3 shows the powers that cities have to regulate subdivisions beyond city limits. Of the 571 cities with subdivision regulations, 143 indicated powers to control beyond the city limits for distances ranging from one-half of one mile to six miles, 196 cities indicated that they have no such power but that the county has subdivision regulations, and 186 cities indicated that neither the city nor the county controls subdivisions beyond corporate limits.

Of the 143 cities controlling subdivisions beyond city limits, one city indicated such control extended for one-half of the one mile, 29 cities indicated one mile, 1 city indicated one and one-fourth miles, 7 cities indicated one and one-half miles, 10 cities two miles, 59 cities three miles, 31 cities five miles, and 5 cities six miles.

City officials were asked to indicate which of certain types of improvements must be installed before the plat is approved by the city. The improvements are grading and surfacing streets, installing water mains, building sidewalks, curbs, and gutters, and providing for sewer lines or sewage disposal.

Of the cities requiring some or all of these improvements, 488 require grading and surfacing of streets, 361 require installing water mains, 303 require building sidewalks, curbs, and gutters, and 421 require installation of sewer lines or provision for sewage disposal. A total of 199 cities indicated that none of these utilities are required of real estate developers.

TABLE 3

LAND SUBDIVISION DATA FOR CITIES OVER 10,000: 1952

Population Group	No. Cities with Subdivision Regulations	Outside Subdivisions Controlled by:			Improvements Required Inside City			
		City	County	None	Grade Streets	Water	Curbs, Gutters	Sewer Lines
Over 500,000	9	2	4	0	7	8	7	8
250,000 to 500,000	19	8	11	0	11	9	12	12
100,000 to 250,000	39	17	16	6	32	25	21	29
50,000 to 100,000	82	32	20	22	60	47	40	60
25,000 to 50,000	141	38	47	50	135	85	73	107
10,000 to 25,000	281	46	98	108	243	187	150	205
All cities over 10,000	571	143	196	186	488	361	303	421

Cities were also asked to indicate the types of improvements that must be provided in land areas outside the city limits before the plat can be approved by the city. Of the cities requiring some or all of these improvements, 83 cities require grading and surfacing of streets, 44 cities require installing water mains, 40 cities require building sidewalks, curbs, and gutters, and 56 cities require installing sewer lines or providing for sewage disposal. A total of 105 cities indicated that none of these improvements are required outside city limits for real estate developers.

TABLE XI

PLANNING, ZONING, AND SUBDIVISION DATA FOR CITIES OVER 10,000: 1951

This table includes 889 cities over 10,000 population that carry on some program in planning, zoning, or land subdivision control. Data were reported to the Year Book early in 1952 by city officials. Under **PLANNING AGENCY**, the first column shows for official agencies the number of appointive members, by whom appointed (see code), and the number of ex-officio members. Under "Who Serves as Planning Director," "P" shows that the city has a full-time director of planning, and the small letter to the right of "P" (see code) shows the official or agency that appoints the full-time planning director. Where the city does not have a full-time planning director, other symbols are used (see code) for the city official who serves as planning director in addition to his other duties. Under "Number of Full- and Part-time Employees" the first figure shows the number of full-time employees, and the second figure the number of part-time employees. Under "Expenditure 1951" (in thousands) are shown the total operating expenditures of the official planning agency for 1951 or the last fiscal year ending in 1951. In the first column under **ZONING**, "Comp." means a comprehensive zoning ordinance covering use, height, bulk, and area, and, following the dash, "Year Last Revised" shows last two digits of year when zoning ordinance was last completely revised. "R" in this column means zoning ordinance was being extensively revised in early 1952. "Miles outside City Limits" shows the number of miles that the city can zone unincorporated areas beyond city limits; "C" means the city does not have this authority but that the county has a zoning ordinance; "N" shows that neither the city nor the county has a zoning ordinance applying to unincorporated areas. Zoning ordinance requirements for off-street parking for new construction are shown under "Off-street Parking" ("Y" for yes, "N" for no). The first letter refers to off-street parking facilities and the second letter to off-street truck loading facilities for newly built theatres, stores, warehouses, hotels, and other commercial establishments; the third letter refers to newly built houses and apartment buildings. In the first column under **LAND SUBDIVISION**, "Comp." means comprehensive subdivision regulations governing layout of streets, blocks, lots, and utilities in newly developed areas, and, following the dash, "Year Last Revised" shows last two digits of year when subdivision regulations were last completely revised. "R" in this column means subdivision regulations were being extensively revised in early 1952. "Miles outside City Limits" shows the number of miles that the city can control subdivisions in unincorporated areas beyond city limits; "C" means that city does not have this authority but that the county has subdivision regulations; "N" shows that neither the city nor the county controls subdivisions in unincorporated areas. The last column shows the improvements that must be installed by real estate developers for subdivisions inside city limits before the city approves the plat (see code). Asterisks (*) and superior numerals ([1]) refer to footnotes at end of table. Leaders (. . .) indicate data not reported.

WHO SERVES AS PLANNING DIRECTOR

A—City Manager
B—Building Official
E—City Engineer
H—Chairman of Planning Board
M—Mayor
P—Full-time Planning Director
W—Dir. Public Works (City)
X—Other City Officials

SELECTION OF PLANNING AGENCY

A—City Manager
C—City Council
D—Elected by people
M—Mayor
W—Commissioner of Public Works
Uno—Unofficial Planning Agency
None—No Planning Agency

WHO APPOINTS FULL-TIME PLANNING DIRECTOR

a—City Manager
c—City Council
m—Mayor
p—Planning Commission

IMPROVEMENTS REQUIRED OF REAL ESTATE DEVELOPERS

G—Grade and surface streets
W—Install water mains
C—Build sidewalks, curbs, and gutters
S—Install sewer lines or provide for sewage disposal
N—None of the above required

[1] Some of the cities, towns, or townships contiguous to the city have zoning ordinances.

[2] Off-street parking required only for duplexes and apartment buildings.

INDIVIDUAL CITY FOOTNOTES

(Cities listed alphabetically without regard to population)

BATON ROUGE, LOUISIANA: Five members appointed by the parish council and four by the mayor, the parish school board, and the state department of public works. Subdivision regulations applicable to all of parish.

CLIFTON, NEW JERSEY: Seven appointed by the mayor, one by city council.

COLORADO SPRINGS, COLORADO: Applies only in central business district. Subdivisions regulated for three miles beyond city, but only on major highways.

DURHAM, NORTH CAROLINA: A subdivision review board may require the installation of all utilities.

EAST ORANGE, NEW JERSEY: Mayor appoints six members and city council appoints two members.

KANSAS CITY, KANSAS: Streets and sewers must be installed before building permits are issued.

KANSAS CITY, MISSOURI: City has right to protest any zoning action by Jackson County, Missouri, affecting areas within one and one-half miles of city limits; the county planning agency can only approve action over city's protest by unanimous vote. Jackson County, Missouri, and counties in Kansas regulate subdivisions.

LOUISVILLE, KENTUCKY: The county requires off-street parking for commercial establishments and residential buildings.

MADISON, WISCONSIN: Applies only to theatres and other places of public assembly.

MERCED, CALIFORNIA: Planning director serves city half-time and county half-time; director is appointed by city manager and county board of supervisors.

MISSION, TEXAS: Subdivision regulations apply beyond city wherever public utility services are furnished.

NEW ORLEANS, LOUISIANA: The city and Orleans parish cover the same area; one of three neighboring parishes has a zoning ordinance.

NEWPORT, KENTUCKY: Mayor appoints three members, county board appoints two members.

PHOENIX, ARIZONA: Not required in central business district.

PORTSMOUTH, OHIO: City charter designates city manager, city engineer, and city solicitor as planning board.

PROVIDENCE, RHODE ISLAND: Mayor appoints five members and the president of the common council two members.

PROVO, UTAH: Applies only to hotels.

ST. PETERSBURG, FLORIDA: Utilities must be installed but not before approval of plat.

SACRAMENTO, CALIFORNIA: Not required in central business district.

SAN BERNARDINO, CALIFORNIA: Four appointed by the mayor and five by the city council.

SAN DIEGO, CALIFORNIA: Four members appointed by the city manager, three by the city council.

TROY, OHIO: Installation of utilities is required before city will annex subdivisions.

WASHINGTON, D. C.: Planning work done by a commission appointed by the President and the National Park Service. Off-street parking required only for hotels.

WINSTON-SALEM, NORTH CAROLINA: Subdivision regulations extend to all of the county.

Public Welfare

Developments in 1951

By Wilbur J. Cohen

Technical Adviser to the Commissioner for Social Security, Social Security Administration, and Member of the Welfare Policy Committee of the American Public Welfare Association

THE year 1951 was a turning point in the business of public welfare. In February, 1951, the scale tilted so that more old people were receiving some income for the first time from the contributory system of federal old-age and survivors insurance than from state old-age assistance which is based on a means test. The year also marked the first year's decline in relief rolls and relief costs since 1945. This is remarkable in that the aged and child population potentially eligible for public assistance has been growing faster than the total population. In 1935, when the federal government first entered the public welfare on a permanent basis, there were about eight million people in the country who were 65 years old or older; now there are more than 12 million. The number of children who are under five years old has increased 55 per cent in the last decade.

It is highly significant to the community that the contributory insurance program has taken over the major share in preventing dependency among the aged and among fatherless children. At the end of 1951 there were 3.3 million aged insurance beneficiaries and 2.7 million old-age assistance beneficiaries. Of the 1.5 million children receiving aid to dependent children, only about 350,000 are on the rolls due to the death of a parent. This compares with 850,000 child beneficiaries under old-age and survivors insurance.

The 1950 amendments to the Social Security Act were important in their effect on public welfare and to employees of cities and other local subdivisions of the states. The year 1951 was the first full year of operation under these amendments. The trend nationwide throughout the year was toward a decline in the number of public assistance recipients and a slight improvement in the adequacy of cash payments to needy persons. Three of the most important improvements in the Social Security Act, as they affect the public welfare situation are:

1. A new category of federally aided assistance was set up for the permanently and totally disabled. Many people, formerly cared for by general assistance which involved no federal funds, were transferred to the new category now eligible for federal matching funds. At the end of 1951 there were nearly 125,000 disabled individuals receiving assistance at an average of about $46 per month.

2. The new social security law made the mother or other close relative who provides a home for a dependent child or children eligible to a monthly payment in which the federal government participates. At the end of 1951 there were about 500,000 such relatives acting as the caretakers of 1.5 million dependent children.

3. The third factor in the public welfare picture was the improvement in the old-age and survivors insurance system.

Benefits were increased for those already getting monthly checks by about 77 per cent and some 600,000 to 700,000 persons were made eligible for benefits who were not eligible before the 1950 amendments.

This was important because 10 per cent of all old-age assistance recipients prior to the new amendments were receiving insurance benefits that were so low that they could not live on them and had to apply to the welfare department for supplemental help from public assistance. When the insurance beneficiaries had their benefits raised, their assistance payments were lowered. In about eight of the 10 cases getting both insurance benefits and old-age assistance payments the assistance payments were lowered and in about one out of the 10 cases the assistance files were suspended or closed.

The 1950 amendments made it possible for the first time for states and localities to include their employees under the insurance program. At the end of 1951, 31 states and territories and four interstate instrumentalities had entered into agreements with the Federal Security Agency to cover some employees. By the end of the year there were 150 modifications of these agreements approved which added additional groups of employees to the original agreements. These agreements and modifications included over 7,000 employing units and about 250,000 employees.

Since the federal law permits the federal agency to make an agreement only when on the date the agreement is made none of the positions covered under the federal law are covered under a state or local retirement system, some units have abolished their retirement systems. At the end of the year many additional units were planning to come under the insurance system in 1952.

Public Assistance. Public assistance is not a static program. It is sensitive to changes in economic conditions. State and local administrators handled over one and one-half million changes in their case loads during the year.

For the nation as a whole the average aid to dependent children family receives assistance for only about two and one-half years, an aged or blind recipient about six to six and one-half years.

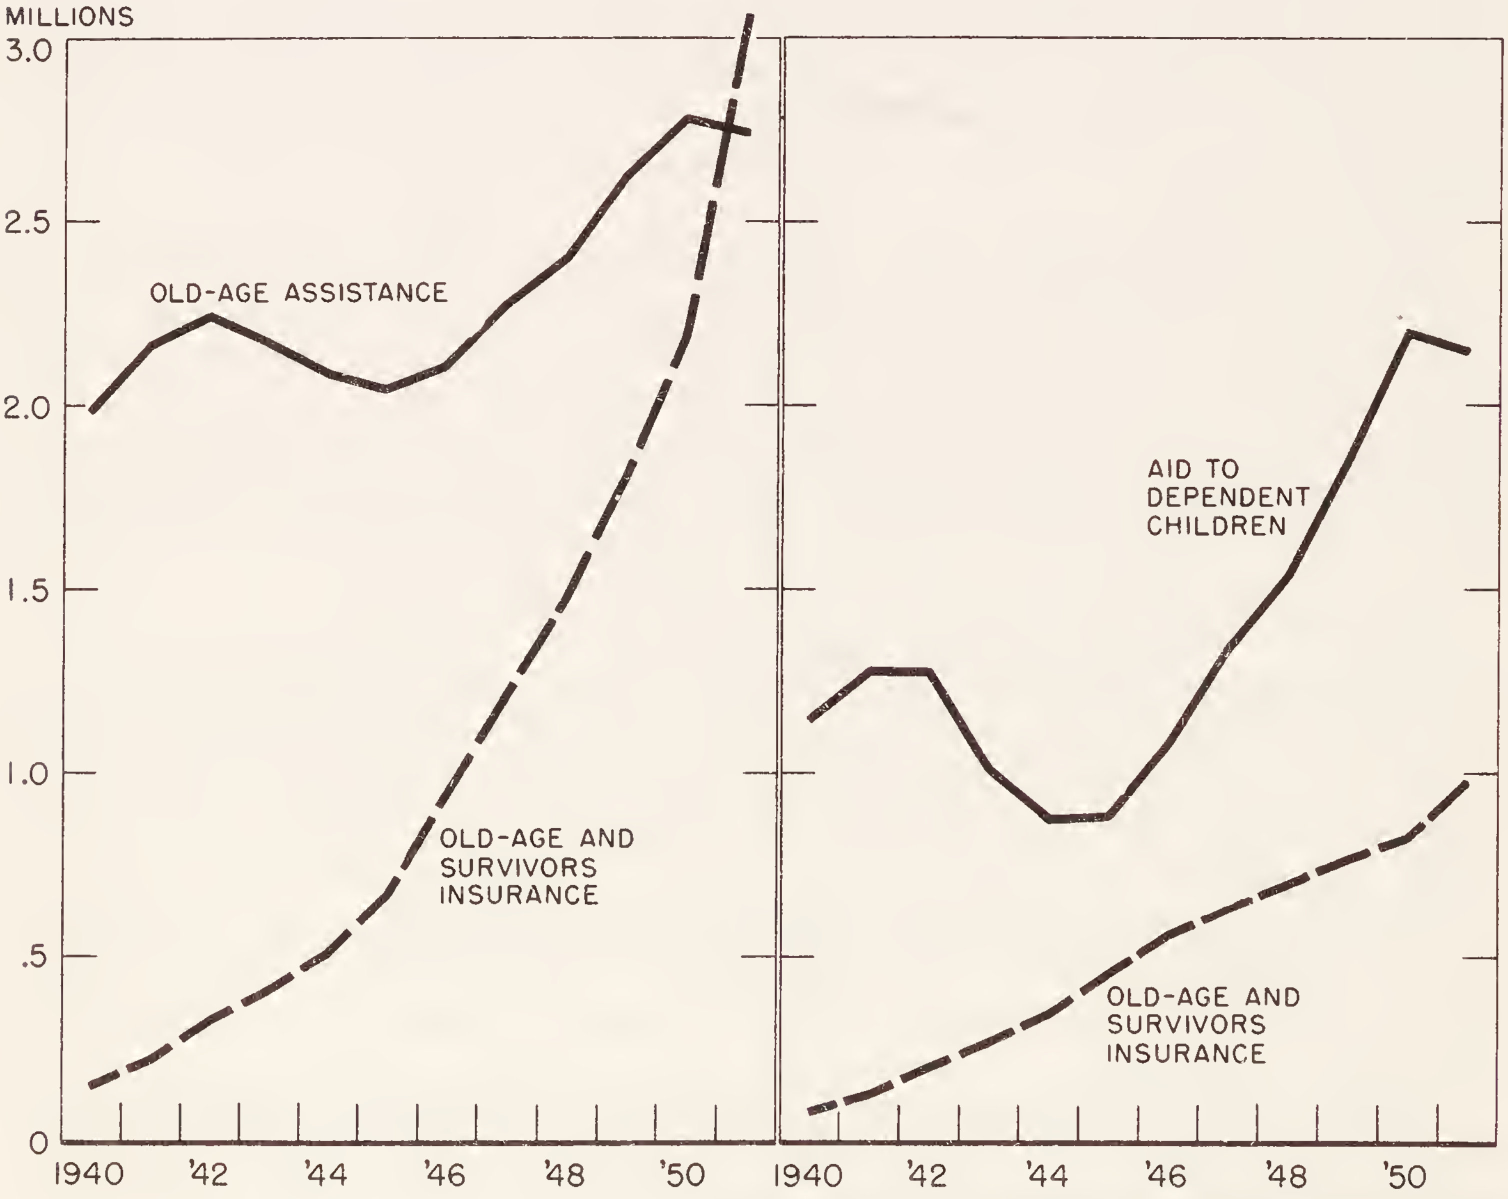
The total number of cases closed in each group were as follows: old-age assistance, 458,052 persons; aid to dependent children, 278,952 families or about 850,000 persons; aid to the blind, 14,054 persons.

During the same period the number of cases opened were: old-age assistance, 397,980 persons; aid to dependent children, 245,791 families; aid to the blind, 15,362 individuals. Net decreases in old-age assistance and aid to dependent children were 60,072 persons and 33,161 families, respectively. There was an increase of 1,308 individuals receiving aid to the blind.

Although persons aided on these programs are not generally considered employable, the improved economic situation enabled over 120,000 to find jobs or, if they were already employed, to increase their earnings sufficiently to become independent.

Almost 1,000 persons are no longer receiving funds from the aid to the blind program, because their sight had been improved or restored through medical attention. Another 900 persons no longer needed aid to the blind funds because they were earning enough to support themselves.

Employment of a parent was the reason why about 100,000 families withdrew from the aid to dependent children program during the year. More than 44,000 mothers were able to earn enough to support their children without further public aid. Almost as many fathers (41,718) took on the support of children who had previously been dependent. They included



Source: Federal Security Agency, Social Security Administration

Average Number of Aged Persons, Children, and Mothers Receiving Payments Under the Social Security Act, 1940 to 1951

The chart at the left shows the trend in the number of beneficiaries aged 65 and over receiving old age, wife's or husband's, widow's or widower's, or parent's benefits. The chart at the right shows the trend in the number of child and widowed mother beneficiaries; after August, 1950, it includes about 25,000 wives under 65 with child beneficiaries in their care. The graph showing aid to dependent children represents children plus one adult per family when an adult or adults are included in assistance group.

fathers who had either recovered from serious disabilities or who had been able to find employment in spite of their handicaps. Earnings of children helped to bring economic independence to 6,347 families and in about 7,500 families, adults in the home, other than the children's parents, took on their support.

About 15,000 parents of dependent children married someone who could support them. In another 13,000 families the recovery of an incapacitated parent made the children ineligible for ADC even though no employment was reported.

Death accounted for the closing of the largest number of old-age assistance cases—228,331 persons. However, some 28,000 needy oldsters found jobs at wages which made them once again independent.

Improved financial condition of relatives was another major reason for closing cases. Other reasons included changes in State laws or policies relating to eligibility, admissions to institutions, and miscellaneous other changes in the circumstances of the people or in the terms under which aid is granted.

Public assistance legislation enacted by the states during the 1951 legislative sessions was largely the result of the 1950 amendments to the Social Security Act. The new provisions in state laws by and large continue the long-time trend towards broadening the public assistance programs and liberalizing the assistance paid to needy individuals who are aged, blind, dependent children, or permanently and totally disabled persons.

The Situation at the End of 1951. As a result of the 1950 amendments and favorable economic conditions, developments occurred during 1951 which are far more significant than many people realize. The most important of these developments may be summarized as follows:

1. In January, 1940, 23 million persons were "fully" insured under the federal old-age and survivors insurance system. As of the end of 1951 there were 62.3 million insured—an increase of nearly 40 million persons.
2. In December, 1951, there were 3.3 million workers, 65 years of age or over, who were fully insured under the federal old-age insurance program and eligible to draw benefits. About 2.3 million workers had "retired" and were drawing benefits. In addition, over one million other persons aged 65 or over were receiving insurance benefits as a wife, widow, or parent. A total of 3.3 million persons were drawing benefits in December, 1951.
3. The number of aged persons drawing federal old-age insurance benefits has exceeded the number drawing old-age assistance payments every month since February, 1951. The number receiving insurance is increasing about 40,000 per month.
4. The number of persons receiving old-age assistance has dropped about 110,000 from the high of 2,810,000 in September, 1950, to 2,700,000 in December 1951—a decrease averaging about 7,500 per month.
5. By the end of 1952 the number of aged persons receiving old-age insurance (3,700,000) is expected to be over one million more than the number receiving old-age assistance (2,600,000).
6. The average monthly old-age insurance payment for a retired worker in December, 1951, was about $42; the average old-age assistance pay-

ment was about $44.50. Average payments under both programs are expected to increase slightly during 1952 irrespective of any legislative changes.

7. The number of aged persons receiving an insurance, retirement, or pension payment from any public agency (excluding old-age assistance) has increased from about 600,000 in December, 1940, to about 4.5 million in December, 1951. This number is expected to increase to about 5 million by the end of 1952.

Confidentiality of Assistance Records. In March, 1951, the Indiana legislature passed a law over the Governor's veto opening public assistance lists to public scrutiny. This law, under Indiana practice, was put into effect toward the end of July. Since, at that time, the Indiana law threw the state's old-age assistance and aid to dependent children plans out of conformity with the Social Security Act, the Federal Security Administrator informed state authorities that, according to federal law, he no longer was authorized to certify public assistance grants to Indiana.

In Washington, in September, Senator Jenner of Indiana was successful in getting an amendment to a tax bill providing that a state might permit access to lists of public assistance recipients if the state passed a law to authorize such access. As the Jenner amendment came out of conference between the Senate and House of Representatives it was modified to require that the state law provide safeguards against the exploitation of assistance rolls for political or commercial purposes.

Railroad Retirement Legislation. Congress increased railroad retirement benefits in 1951. Substantial and far-reaching amendments were enacted which transfer persons with less than 10 years of railroad service to the social security system. Benefits were added to the railroad system for the spouse of a retired person. Benefit increases for present and future annuitants (aged and disabled) were increased 15 per cent. Monthly survivors benefits were increased 33-1/3 per cent.

Unemployment Insurance. At the end of 1951 funds available for the payment of state unemployment insurance benefits approached the $8 billion mark. This fund was equivalent to 8 per cent of taxable payrolls. Benefits paid out during 1951 were equivalent to about 1 per cent of taxable payrolls. Benefits and reserves of the various states varied widely. Forty-two states enacted amendments to their unemployment insurance laws in 1951.

Professional Organization. The American Public Welfare Association (1313 East 60 Street, Chicago 37) is the national association serving the field of public welfare through agency and individual memberships. The organization held its round table conference in Washington November 29, 30, and December 1, and regional meetings were held in 1951 in six cities. The Association has continuing national committees which are actively at work in such fields as welfare policy, medical care, services to children, and social work education and personnel.

During 1951 the Association issued a statement entitled "Next Steps for Action in the Field of Federal Welfare Policy" and is presently in the process of preparing a statement on public welfare principles, a joint statement with the American Public Health Association entitled "Tax-Supported General Medical Care for the Needy," a definition of the job of the public assistance worker, and other statements pertinent to the field.

Public Health

Developments in 1951

By Ira V. Hiscock

Chairman, Department of Public Health, Yale University, and Commissioner, Board of Health of New Haven

FAVORABLE mortality rates were continued in 1951. Further decreases were recorded for infant and maternal deaths and for several communicable diseases including tuberculosis, for example. Tuberculosis is far from "licked" according to reports of case finding. Degenerative diseases took a heavy toll similar to the experience of the previous two years. Early reports of motor vehicle deaths and of deaths and incapacity due to home accidents indicate the need for constructive action, including health education, in many directions, jointly by numerous groups concerned. The 1951 epidemic of poliomyelitis was second only to that of the previous year. Birth rates changed only slightly.

Legislation. In Arizona all health, welfare, correction, and penal agencies were placed under a new department of health, welfare, and correction. Georgia adopted an act recognizing alcoholism as an illness and (like several other states noted later) creating a commission on alcoholism; and provision was made for voluntary or involuntary commitment of alcoholics for treatment. Among states making additional provisions for the care of patients with mental illness were Idaho, Indiana, Iowa (including care of alcoholics), and Kansas. Minnesota authorized counties to create and maintain nursing homes for chronically ill aged persons; Nevada adopted an act requiring isolation of infectious tuberculosis cases, adopted a basic sciences bill, and tightened the state dental and pharmacy acts. In New Jersey, Chapter 69, laws of 1951, permits the establishment of local health districts, either with a consolidated local board of health or a county board.

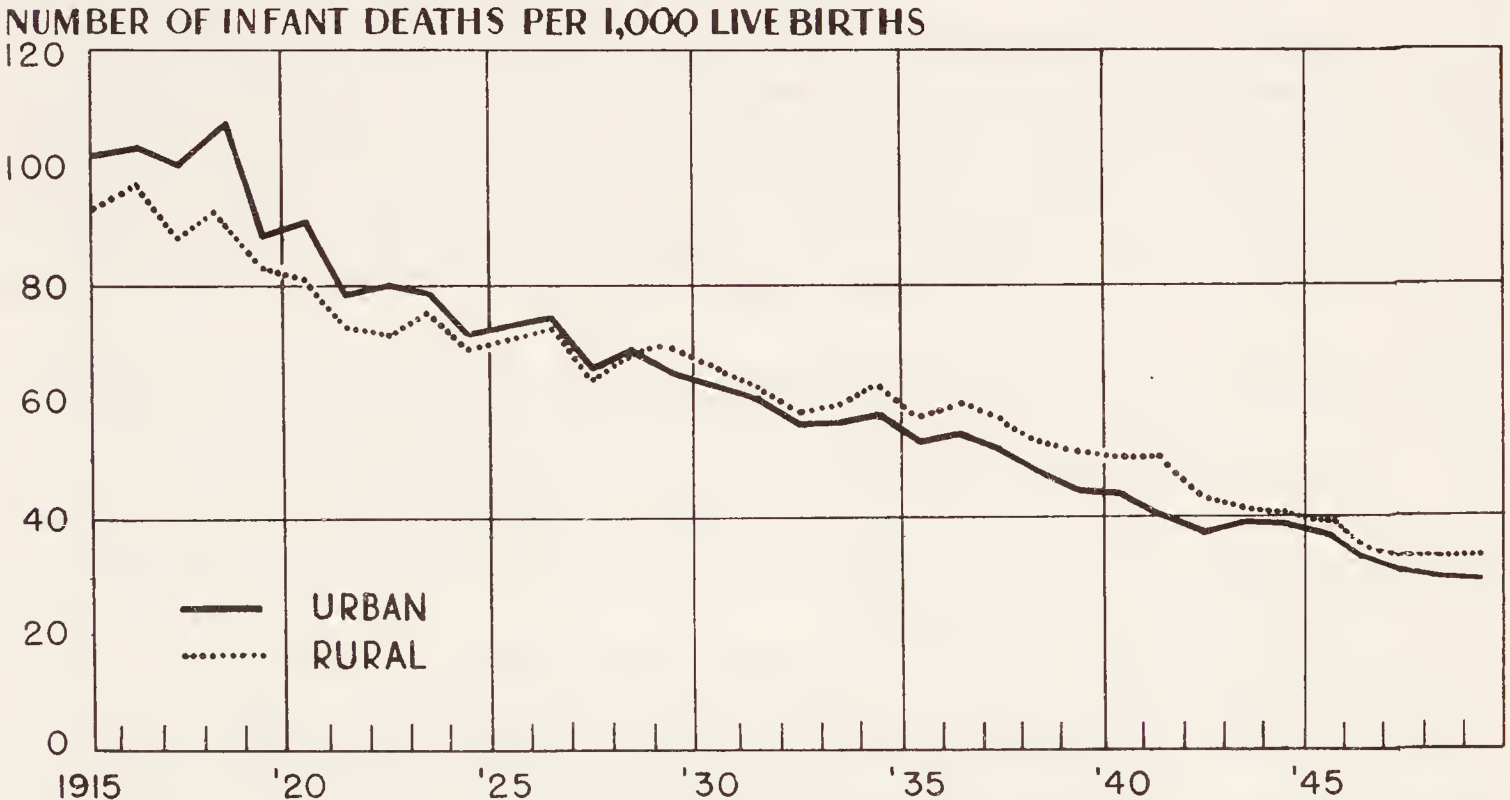
Included in the legislative measures in New York were (a) requirement that all counties provide free hospital care for tuberculosis; (b) provision that the mental health department keep records of admissions and examinations in licensed private institutions as well as state mental institutions; authorization for the state department of health to license and supervise private unincorporated maternity hospitals, and to exercise supervisory and advisory powers for the promotion of child health, including care in hospitals.

North Dakota, Rhode Island, West Virginia, also adopted legislation establishing new commissions, divisions, and measures to cope with the problems of alcoholism. Tennessee health legislation included strengthening of stream pollution laws and a statewide anti-rabies law requiring annual vaccination of all dogs. Wyoming authorized the University of Wyoming to establish eight schools of nursing in the state, and authorized creation of city, county, or district public health departments.

As the year 1951 came to a close the President of the United States announced the establishment of a commission of 15 members on the Health Needs of the Nation. The scope is broad for a searching inquiry concerning current and prospective supply of professional personnel, public health requirements, geographical distribution of resources and facilities, medical research, and adequacy of public and private programs designed to provide methods of financing medical care.

Nursing. Hennepin County, Minnesota, cities, villages, and school districts and towns established a nursing district effective the first of January, 1952, under Laws 1951, chapter 563. The district will serve all of the county except Minneapolis, each municipality paying a portion of the expense according to population. The nursing district will be operated by a nursing committee of seven members, including the county superintendent of schools, three members of the governing bodies of the constituent political subdivisions chosen at a meeting of the subdivisions, and three other residents of the district chosen at such a meeting.

Fluoridation. The American Dental Association, the American Medical Association, the American Public Health Association, the United States Public Health Service, and numerous state and local agencies have reported favorably on the fluoridation of public water supplies to reduce tooth decay. A special committee of the National Research Council's



Source: United States Public Health Service, Federal Security Agency

Annual Number of Infant Deaths Per 1,000 Live Births in Urban and Rural Areas in the United States: 1915 to 1949

The rates are computed for the entire birth registration areas; "urban" includes cities and other incorporated places of 2,500 or more population and "rural" refers to areas other than urban places. Prior to 1939 infant mortality data were tabulated by place of occurrence and since 1939 by place of residence.

division of medical sciences has endorsed the process in "any community which includes a child population of sufficient size and which obtains its water supply from sources which are free from or are extremely low in fluorides." This report says that with proper safeguards the addition of fluorides to drinking water for the reduction of tooth decay appears to be harmless. However, it cautions that fluoridation programs should be conducted under expert dental and engineering supervision by the state board of health; also that fluoridation of water supplies "will supplement but not supplant other dental health measures."

Illustrating developments in states, seven municipalities in Minnesota started adding fluorine to their water supplies and plans were approved for fluoridation in 13 other cities and villages. Tuscaloosa became the first town in Alabama to use sodium fluoride in drinking water to prevent tooth decay, while New Britain was the first city in Connecticut to take this step. Ten cities and towns in Florida have won approval to add fluorides to municipal water supplies to reduce dental decay, according to the state board of health, and 12 other cities and towns were planning to add fluorides to the municipal water systems. Kennewick was the only city in Washington which is fluoridating the water, but Chehalis, Centralia, Clarkston, and Longview were in the process of installing equipment.

New Organizations. In the 1950 review reference was made to the new organization (National Association for Mental Health) formed as the result of the consolidation of the National Committee for Mental Hygiene, the National Mental Health Foundation, and the Psychiatric Foundation. This has many implications for local planning in health affairs. In the first annual report are sketched the main lines of the association's program—mental health, education, dementia praecox research, community organization and improvement, and expansion of psychiatric services. The association helped organize nine new state mental health associations in 1951, bringing the total up to 40. Including local societies, the total of related societies is over 300, more than a fifth of which were organized in 1951.

Civil Defense. Among other developments, to assist personnel in health departments and other governmental or private organizations to achieve a broader understanding of radiation hazards and problems, two-week training courses in radiological health have been offered without charge to qualified applicants by the Public Health Service at its Environmental Health Center in Cincinnati, Ohio.

Local Health Units. A full-time health unit is defined in the 1951 United States Public Health Service directory as "one which is officially organized to provide medical, nursing, and sanitation public health services during all of the regularly scheduled work week of the governmental unit to which it is attached and which is under the direction of a full-time health officer or other designated administrative head." A full-time health officer is defined as "one who is officially designated to direct the activities of a health department and who is paid to so function during all of the regularly scheduled work week of the governmental unit to which the department is attached." Emphasizing the great problem of personnel of nearly 1,300 jurisdictions serving local areas, including state service districts, more than one-fifth were without a health officer as of July 1, 1951.

In December, 1951, the American Public Health Association sub-committee on Local Health Units presented recommendations to the National Advisory Committee of the National Health Council urging that the local health units program be intensified, that assistance be given in developing state conferences, state or local health councils, or other suitable means for getting full citizen participation in developing or improving local health services. While considerable progress has been made toward meeting this major problem, in establishing new local health departments and in expanding the coverage of existing departments, there are 40 million people in the United States who still lack the type of health protection that local departments can give.

Meanwhile, the beginning of what may be a dramatic story was written in Pennsylvania. Citizen groups, professional societies, and voluntary health agencies mobilized public opinion in support of legislation authorizing county health departments to supersede a cumbersome and uneven service which has been provided from the state capital. These groups organized a state health council which increased its activities to make sure that local health departments will follow permissive legislation. Butler County has been selected as the location of a "pilot" health department. According to the legislation the state secretary of health is empowered to decide which counties shall have county units and which counties must combine with others to form joint county health units. The state will subsidize 50 per cent of the county health units' expenditures up to a maximum state grant of 75 cents per capita.

A number of new health departments have been created during the year. In North Dakota two new local districts of five and three counties respectively have been organized. New York added a county of 33,000 making the 14th up-state county to be organized on a county basis. In Illinois three counties with a combined population of 64,000 are creating a consolidated health department following a referendum. In Iowa the first full-time health officer has recently been appointed for Des Moines. In Connecticut a city with a population of 33,600 has appointed a full-time medical health officer, but no towns in the state have yet taken advantage of the state's permissive law authorizing consolidated municipal health departments and providing state aid for them.

Hospitals. A joint commission for the accreditation of hospitals in the United States was created by four national agencies: the American College of Physicians, the American College of Surgeons, the American Hospital Association, and the American Medical Association. This commission will take over the work carried on for some 25 years by the American College of Surgeons, with 3,200 hospitals approved by ACS at present. The hospitals' teaching program will continue to be the province of the Council on Medical Education and Hospitals of the American Medical Association.

Contracts for the erection of a $3,500,000 tuberculosis hospital at Tampa, Florida, have been reported by the state tuberculosis control board. The project is modeled after the sanatorium at Lantana and will provide 500 beds.

In South Dakota authorization of municipalities to establish, maintain, and tax for hospitals and dispensaries and to regulate such facilities was amended to indicate the capability to tax more explicitly. The tax is not to exceed five mills in cities having an assessed valuation of over eight million dollars. Among illustrations of increasing concern for health here are increased hospital construction, higher minimum standards for milk, restaurant inspection, and inauguration of garbage and refuse disposal in municipalities, besides a beginning of fluoridation.

If a pending court decision is favorable to the 1951 Act of the Indiana General Assembly, beginning in 1952 all city-county public health and hospital activities in Marion County are to be unified into a newly created municipal corporation headed by a legislative body of five persons (three appointed by the mayor of Indianapolis and two chosen by the county board of commissioners). All existing properties of the city and county units are to be transferred to the new unit, which in turn may enact health ordinances, levy taxes, and incur indebtedness. The bill was sponsored by civic and professional groups interested in spreading health and hospital activities to cover more than 100,000 suburban residents of Indianapolis.

Among the many related developments in Michigan communities were the establishment of new quarters for a health clinic in River Rouge; the change of administration of the city hospital in Lapeer to a newly created county hospital board, and the addition of a dental clinic to the health department of Dearborn.

Late in 1951 was published a report of a study of general medical care programs in local health departments, prepared for the subcommittee on medical care of the Committee on Administrative Practice of the American Public Health Association. This report is concerned with the character and extent of the programs, which in this study include the operation of general hospitals as well as the administration of general medical care of the needy. Following an extensive summary of findings, nearly two-thirds of the report deals with program descriptions from 40 local areas, large and small, in 22 states.

At the close of 1951 there were 766 Hill-Burton hospitals under construction—almost as large as the total of 781 completed and placed in operation since the program's inception five years ago. Another 165 projects are in the initially approved, preconstruction stages.

Housing. A proposed housing ordinance, to be enforced by the health department, was prepared by the Committee on the Hygiene of Housing of the American Public Health Association. This ordinance is based, so far as practicable, on broad performance standards, while more detailed specifications are suggested in supplementary regulations to be adopted if desired under a provision of the basic ordinance. The special committee which prepared this "model" or "proposed" (not "standard") ordinance was headed by the able health commissioner of Milwaukee. The health officer can omit or strengthen individual provisions to fit local conditions. For example, in smaller cities, where the slum is in a state of embryonic development, adoption of an ordinance of this type could put a "check on the evolution of future blight," besides serving as a guide for the health officer who recognizes that this vital area of public health may no longer be neglected.

Responsibilities of health departments vary greatly in relation to housing affairs. For example, by provisions of amended House Bill 113, the 1951 Ohio General Assembly conferred upon the state public health council power to regulate the location, construction, and operation of trailer parks. The council's authority to license such activities, it is assumed, supersedes local ordinances.

Sanitation. Action of the state board of health in condemning water supplies of several cities in Montana, including Helena, has caused concern of city officials. Some municipalities will be compelled to make substantial expenditures to protect the public for improvement of facilities for sewage disposal and for water supplies. Montana is one of the states in which a more active health education program and useful printed materials were developed in 1951 for the interpretation of problems and for information purposes relating to health.

In 1939 the state of Oregon had untreated sewage from 45 communities which was being discharged into the various river systems and there were six more communities discharging into coastal waters polluting shellfish areas. At that time 49 public treatment plants existed in the state but 21 of these were reported to be outmoded or overloaded. In addition 34 sources of major industrial pollution were in need of correction. Just preceding World War II, cities built 11 new treatment plants but during that period four additional existing plants became overloaded. During the war years the federal government constructed 25 treatment plants serving military installations or housing projects. From July, 1946, to 1952, 39 public sewage treatment plants were installed. In all, 101 plants have either been built or are under construction. Thirty-five major sources of industrial waste pollution have been corrected. The efforts to clean up Oregon waters received a substantial boost with the beginning of operation of Portland's primary treatment plant in October, 1951. Salem and Corvallis treatment plants are under construction and Eugene is installing the interceptor from the city to a treatment plant site located to serve the major portion of the suburban area as well as the city.

Of interest is the action in Fraser, Michigan (1,369 population), in taking steps for the disposal of garbage by grinders. An ordinance of July, 1951, permits such units of an approved type to be purchased and installed by the village upon application. The cost of the units and installation may be paid by the applicant in 12 or less installments as a part of the water bill. The building code was amended to require that all new dwelling construction be equipped with an approved type of garbage disposal unit.

Salaries. Five annual studies of salaries in state health departments have been made by the Public Health Service in cooperation with the Committee on Professional Education of the American Public Health Association and the Association of State and Territorial Health Officers. Data from the fifth study indicate general upward revision of salaries for public health workers in 1951. Among nine classifications of workers the percentage increase in median salary intervals ranged from 4 to 14 per cent during the year, and from 20 to 50 per cent during the five years. That salaries of public health and allied workers are not "an ivory tower concern" is indicated by at least two articles in issues of the New York Times during the last third of 1951.

Cooperative Action. Joint planning and cooperative action in community health affairs was stepped up in several geographical areas in 1951 through improved health education, better organization, continuing appraisals, and extension of local, state, and national health council activities. An example of possibilities is given in the November, 1951, publication of "Responsibilities of State Departments of Education and Health for School Health Services," sponsored jointly by the National Council of Chief State School Officers and the Association of State and Territorial Health Officers, with "the sole objective of this cooperative study" to "improve school health services and their administration." Programs of school health services were outlined and patterns of cooperation were suggested, having in mind that "good health is essential to effective living and is an important goal of education"; and also that the school and health departments supplement and reinforce the efforts of the home.

Professional Organization. Members of the several professions making up the public health movement met in San Francisco, over 4,000 delegates, at the annual conference of the American Public Health Association (1790 Broadway, New York). Subjects discussed by speakers in meetings ranged from civil defense to health education, from atmospheric disinfection to rehabilitation, recruitment and training of personnel, to safeguards for maternity and infancy, from housing to the epidemiology of mental health, from local health affairs to world health. The three major standing committees (on administrative practice, on professional education, and on research and standards) held long and useful sessions; the research and standards committee celebrating its 20th birthday. The next meeting will be held in Cleveland in October, 1952.

Housing

Developments in 1951

By John D. Lange

Executive Director, National Association of Housing Officials, Chicago

ALTHOUGH 1951 saw the house building industry gearing into the defense economy, the change-over was so gradual that it was not until the end of the year that cutbacks were noticeable and the rate of building approached the government's announced goal of 800,000 to 850,000 units annually. Housing starts numbered 1,090,000 units—second highest on record and some 28 per cent more than the goal set early in the year.

Production. House building in so-called rural nonfarm unincorporated areas withstood the effects of controls in 1951 better than did the urban areas. Although starts for private urban homes dropped off 32.5 per cent during the year, rural nonfarm area starts were off only 13 per cent. The Bureau of Labor Statistics attributed the shift from urban to small community building to the increase in new housing at military and naval installations, which generally are in small and outlying places and to the less deterring effect of Regulation X in rural nonfarm areas "because mortgage-credit terms in these places have usually been more stringent than in cities where liberal government assisted loans are widely prevalent."

Multi-family apartment building, off 24.4 per cent from 1950, took the biggest drop for the year. The 149,000 units started were about 48,000 fewer than were built in 1950. Single-family house production—904,300 units—showed a drop of 21.6 per cent and two-family structures, with a total of 40,700 units, were down 9.2 per cent.

Defense housing, programmed for designated critical defense areas, accounted for only 3,170 units, 1,810 of which were for sale and 1,360 for rent. However, 65,475 units of such housing had been programmed by the end of the year and private builders had applied to build 169,034 units, more than two and one-half times the number programmed. Approval for construction had been given for 40,877 units.

Meanwhile, by the beginning of 1952, the Public Housing Administration had allocated 4,575 units of temporary or mobile defense housing in 24 projects located in 22 areas, all near army, navy, or air force installations. The poor showing that defense housing made during the year was directly attributable to the delays encountered in Congress in getting basic legislation passed and appropriations made for the program.

Public housing starts of 71,000 units represented only 6.4 per cent of the total housing picture in spite of the fact that such starts were up 62.3

per cent over 1950. The federally aided program under the Housing Act of 1949 accounted for most of the units, with the balance divided between state and city aided programs.

Although the Housing Act of 1949 authorized the construction of 135,000 units of federally aided public housing annually for six years, Congress, through its Independent Offices Appropriation Act, in mid-1951 cut the public housing program to 50,000 units for fiscal 1952 (which began July 1, 1951). This cut was substantially greater than the amount necessary to conform this program to cutbacks in house building generally. By the end of the year, program reservations had been approved for 331,807 units of such federally financed housing, of which 94,041 had been built or were under construction.

Cooperative housing, stimulated by the financing terms available under the Federal Housing Administration's "213" program of insured loans for such housing, appeared to be on the up-grade during 1951. Under this program, mortgages for 7,995 units of cooperative housing in 35 projects were insured during 1951.

Prefabricated housing, although down from 1950 by about 5,000 units on total number of such houses sold in 1951, accounted for a larger percentage of new homes—about 6 per cent—than in any previous year. An estimated 50,000 prefabs were sold and shipped during the year by some 80 producers. Dollarwise, prefabricators showed an increase in gross sales.

Costs to Build and Buy. Costs to build new residences set an all-time high in 1951 with an increase of 8 per cent over 1950—the biggest yearly increase since 1948, according to the E. H. Boeckh and Associates index of construction costs. Costs rose almost steadily each month during the year until they hit 239.3 in October and November (1939 equals 100 on the Boeckh index), the all-time high. December showed only a fractional drop.

In the public housing program, there was a marked improvement in bidding conditions after July, 1951. With the exception of large metropolitan areas where defense projects had high priorities, a large number of bids were obtained on each project tending to lower costs, particularly in the general construction field. Conventional type construction suffered less by rising costs than did fireproof construction used in the program. Further, local housing authorities pared development plans considerably, in many cases using the Public Housing Administration's minimum standards of space and amenities as the maximum.

Financing. Although the total number of mortgages written on nonfarm properties in amounts of $20,000 or less dropped off during the year from 3,032,452 in 1950 to 2,877,860 in 1951, the dollar amount of all such mortgages and the average amount for each mortgage set new high records—a reflection of the more expensive types of housing built and of rising prices and costs. Total dollar amount of such mortgages was almost 16.5 billion, a 1.4 per cent increase over 1950, and the average dollar amount of mortgages was $5,701, $366 above 1950's average. December, 1951, also hit an all-time high for average dollar amount of such mortgages—$5,831.

Federal Housing Administration insurance or Veterans Administration guarantees again, as in 1950, stood behind 34 per cent of 1951's mortgage loans—although the year saw a drop of 3 per cent in the number insured by FHA and an increase of 3 per cent guaranteed by the Veterans Administration. Mortgage recordings by savings and loan associations made up 32 per cent of the 1951 total—an increase of nearly 5 per cent over 1950 and the highest proportion of the total since 1946. Recordings by individuals showed a 10 per cent increase over 1950—biggest increase for any group of investors, while commercial banks and insurance companies made about the same percentage of loans as in 1950. Mutual savings banks recordings went down 5 per cent and all other mortgage recordings fell off by about 8 per cent.

Investment of private funds in public housing projects took on a new significance in 1951 with the sale of some 330 million dollars worth of bonds to finance projects built under the 1949 housing act by 134 local housing authorities. Congress had been assured by the sponsors of the 1949 act that sale of housing authority bonds to private investors would almost entirely finance the cost of the projects. The first two offerings, one in July and one in October, bore out the contention of the sponsors. The bonds were easily sold because of their virtual government guarantee and because of their tax-exempt status. Moreover, average interest rates on the bonds sold (2.073 for the first and 2.051 for the second) were lower than the government itself could have offered local authorities.

PERMANENT NONFARM DWELLING UNITS STARTED, BY TYPE OF OWNERSHIP

During 1951, starts (1,094,000 units) were 32 per cent below the 1950 level but exceeded the level of all other years on record. Multifamily provide starts (85,100) were nearly 50 per cent below the high levels of 1950 and 1949, while multifamily public starts were about 70 per cent above 1950.

Federal Government Administration. The organization of federal housing agencies remained unchanged during the year. But the defense economy dictated new responsibilities that were given primarily to the Housing and Home Finance Agency, including the programming of privately financed housing in critical defense areas, of publicly financed portable and mobile housing in defense areas with temporary needs, of public financed permanent housing in areas where private industry was unable to meet the need, and acquisition and planning of sites for defense installations in isolated or removed areas. Many other duties also were assigned to HHFA, and eight regional offices were set up during the year. They were responsible for coordinating agency defense activities in the field, keeping in close touch with developments related to housing and community facilities in defense areas, and recommending to the administrator on matters of credit controls. They also serviced prefabricated housing loans and administered the community facilities program on a regional basis.

The Public Housing Administration also underwent some changes because of the defense economy. Four field offices—Detroit, Los Angeles, Philadelphia, and Seattle—were closed in mid-year and their jurisdictions consolidated with other field offices when the public housing program was cut back. During the year the PHA was also given responsibility for (1) processing applications for schedules and allotments of controlled materials for publicly financed (federal, state, city) multi-unit housing; and (2) for provision and management of publicly financed defense housing.

The Federal Housing Administration, in addition to administering the new Title IX insurance program for defense housing, was made responsible for processing applications and schedules for critical materials under the Controlled Materials Plan for privately built multi-unit housing.

The Home Owners Loan Corporation, supervised by the Home Loan Bank Board, was liquidated and closed its doors to business in May, 1951, after turning over to the federal treasury a 14 million dollar surplus from its operations. The HOLC in its 18 years of operation helped some 800,000 home owners save their properties from foreclosures.

Credit and Materials Controls. Recognizing the need both to curb inflationary pressures in housing and to prevent too much of the supply of critical materials from being drained off by nondefense activities, the federal government instituted a series of controls during the year.

Regulation X, issued in the fall of 1950, had been the first attempt at controls on new housing construction. In mid-year of 1951 some attempt was made, through the Voluntary Credit Restraint program, to control credit terms on existing housing. Under the voluntary program, lenders were asked but not forced to follow a conservative policy on real estate lending and not to make loans in which the outstanding credit would exceed the limits imposed by Regulation X on new construction.

Meanwhile, the government became increasingly aware that credit controls alone could not cut back materials use sufficiently and keep housing starts within the prescribed 800,000 to 850,000 limit. Thus, early in the year began a whole series of more or less minor materials controls. Early controls banned certain types of commercial construction and required federal permission to build others. Other controls limited production on specific items, such as aluminum window frames, and set up a system of quotas for obtaining supplies for maintenance, repair, and operation.

By October 1 all housing construction went under the Controlled Materials Plan, a system of allotting in advance by quarter-years available critical materials to all nondefense industries on the basis of available supply after defense needs were met. Under the Controlled Materials Plan, strictest controls were put on multi-unit buildings.

Rent Control. Rent control, which in 1950 had been on the wane because of local option provisions of the existing rent control act, again became a vital part of defense economy measures in 1951. Under authority of the 1951 amendments to the Defense Production Act, the rent stabilization office certified 58 localities as critical defense areas and put under control approximately 400,000 units.

In areas relatively unaffected by defense efforts an estimated 507,887 units were decontrolled during the year, leaving an estimated 6,968,000 units under control or recontrol in the country at the end of the year. A year before, an estimated 7.5 million units were under control. Average rent increases of $ 6.24, or 13.2 per cent, per month were granted on units under control.

Public Housing. Public housing—long called upon to fight for its life against strongly organized opposition—in 1951 became the target of a new attack made in the name of "defense economy." In Congress, in state legislatures, and in local communities big and small, opponents used the defense motto and every other device available to attempt to kill the program.

Pressures in Congress to eliminate the program as a defense measure were felt first when the House in mid-May voted in its Independent Offices Appropriation bill to cut the number of public housing starts under the Housing Act of 1949 for the fiscal year beginning July 1 to 5,000—a token amount that virtually spelled the end of the program. However, widespread and strenuous protests persuaded the Senate to vote for 50,000 units, the number recommended by House and Senate committees. When the bill again went to a vote in the House in August, 50,000 units were approved.

Meanwhile, opposition forces—mainly realtors and home builders—were working through state legislatures to force local referenda on almost every step of the public housing program. In all, 15 state legislatures considered 20 separate bills that would have demanded such referenda. Only one of the 20 attempts, however, was completely successful—that in Nebraska.

In three states housing opponents brought suits attacking the constitutionality of enabling legislation but the state supreme courts—Minnesota, Georgia, and North Carolina—ruled in favor of public housing.

Locally, opponents of the program continued their campaign of bringing about delay and confusion by calling for referenda and re-votes by city councils; by applying for court rulings on state and local laws; by bringing pressure to hold up zoning changes and building permits for projects; and by organizing neighborhood protests against site selections for projects. Almost all such local campaigns showed the earmarks of the national "canned campaign" directed by the real estate lobby against public housing.

Attempts to force local referenda were not as successful in 1951 as they had been in 1950, however. Public housing questions were put to a vote 11 times in 10 different communities during the year (as against some 30 such votes held in 1950). In four cases the outcome was favorable to public housing; in seven unfavorable. Two votes were held in Milwaukee, both on the same ballot. In one case public housing was rejected but in the other it was approved. In Los Angeles and Waukegan, Illinois, re-votes by the city councils forced by the opposition resulted in blocking at least temporarily programs that had both been approved earlier.

In the vast majority of cities and small towns operating under the program steady progress was made in public housing. With the 1949-50 "tooling up" period over, the Public Housing Administration by December 31, 1951, had given the go-ahead signal to 594 localities for construction of 101,130 units, although not all were actually building. By the end of the year, 998 communities were participating in the program, either in planning or construction stages. The vast majority of localities building or planning to build under the program were areas with less than 50,000 population. A little over 29 per cent of the reservations for participation in the program were for unincorporated areas of less than 2,500 population; better than 54 per cent were in cities of 2,500 to 50,000 population; and only about 15 per cent were in cities larger than 50,000 persons.

A major effort to reconcile differences between disagreeing factions on housing questions was a "National Housing Policy Conference" called by Mayor Joseph Darst of St. Louis in that city in March. Leaders in various fields met and drew up a series of resolutions aimed toward solving overall housing problems.

Urban Redevelopment. The slum clearance and urban redevelopment program, given its first federal aid through the Housing Act of 1949, during 1951 progressed far enough into the planning stages in many communities to get some idea of the trends that redevelopment is taking.

A study of 32 cities and towns that had made the most progress in the program by the end of the year indicated a strong trend toward reuse of cleared areas for residential purposes, principally through privately built sale and rental housing. The 32 cities surveyed had selected for redevelopment 54 areas, ranging from four to 178 acres with a median size of 35 acres. Of these 54 areas, 47 will be reused principally for residential purposes; two will be reused for mixed residential, commercial, and industrial purposes; and five will be left predominantly open.

Not many localities, however, had reached the point of actually clearing sites for specific redevelopment projects by year's end. Activity during the year indicated that for a number of reasons the urban redevelopment program would proceed slowly. Newness and complexities of the program were among the major reasons for the seemingly slow progress. In many cities a great deal of ground work had to be undertaken in explaining the purposes and operation of the program before full public acceptance was given. In two cities—Cincinnati and Los Angeles—bond issues to provide the local share of funds for acquiring land and clearing slums were voted down, apparently because of lack of public familiarity with the programs.

Relocation of families from slum clearance sites proved to be another major difficulty that slowed the program. In a tight housing market it was difficult for many cities to find suitable quarters for families to be moved from the sites of proposed projects, particularly for families of low income.

In the face of these difficulties, however, five cities—Baltimore, Chicago, Detroit, Norfolk, and Mayaguez, Puerto Rico—began acquiring land for projects and two cities—Indianapolis and Philadelphia—saw actual construction started by redevelopers on cleared land.

By the end of the year 238 localities had received approval of reservations for federal funds for capital grants in the amount of $183,102,223; more than 130 localities had already received preliminary planning funds; and 60 cities had received funds for final planning of specific projects.

Increasing interest in the urban redevelopment program was evidenced by the enabling legislation to permit urban redevelopment that passed in six states—Delaware, Kansas (later declared unconstitutional), Maine, Nebraska, North Carolina, West Virginia, and Alaska. In several states laws were passed that broadened the scope of existing legislation and permitted use of federal funds for local projects.

Moreover, test cases of state urban redevelopment laws generally resulted in favorable decisions. The Tennessee Supreme Court ruled favorably on its state law, as did Michigan. In Illinois a United States district court upheld the state redevelopment act. The Kansas Supreme Court, however, ruled that its law, because it applied to Kansas City only, was special legislation and therefore unconstitutional. And in Texas the supreme court refused to rule on whether or not the state's housing authority act could be used for redevelopment, thus allowing a lower court's decision against redevelopment to stand.

Disposition of Federal Housing. Progress in removing World War II housing from the federal government's jurisdiction was slowed up considerably in 1951 by the "freeze" placed on such activities by Congress because of the Korean situation. At the end of 1951, there were 286,602 units of permanent and temporary war housing still under federal control as compared with 296,087 a year before. Some 31,600 units of veterans reuse housing also were still in federal control.

Most of this war housing was built under terms of the Lanham Act for immigrant war workers—civilian and military—near war plants and military installations. The original law provided for the disposition of such housing as promptly as "may be advantageous under the circumstances and in the public interest." After the war, however, shortages of housing and other considerations delayed much of the disposition program and in 1950 and 1951 the Korean situation held up disposal activities.

Veterans reuse projects, temporary or demountable housing built by the federal government for war workers, in many cases moved to different localities for use by educational institutions and other local bodies for veterans families, was gradually being closed down during the year by local owners. However, some quarter million such units still remained in local use at the end of the year.

Pending the lift of the "freeze" on disposition activities, local authorities were taking all necessary steps to acquire permanent projects from the government short of actually taking them over. Thus, once the "freeze" was off, 26,584 units in 92 projects could almost immediately be turned over to local authorities for operation on a low-rent basis.

Temporary war projects were not held to the "freeze" as rigidly as were permanent ones. Properties in both critical and noncritical areas could be transferred to local ownership on an individual "case" basis after the Department of Defense had declared them unnecessary to their needs. Some 7,000 units of temporary housing were "disposed" of in this manner in 1951.

Action in the States. Connecticut increased authorizations for its moderate-rental housing program by 50 million dollars to provide approximately 4,000 additional dwellings, mostly for veterans, bringing the total authorization for the program to 115 million dollars.

Wisconsin amended its veterans housing law to increase to $3,500 the amount veterans could borrow to purchase homes and upped the maximum value of houses eligible for purchase under the program from $10,000 to $15,000. California passed a constitutional amendment for a 150 million dollar bond issue to increase its existing program of loans to veterans for purchase of homes and farms. The amendment will be voted on in the 1952 elections. Ohio's supreme court upheld the constitutionality of tax exemption for low-rent housing in the state.

Race Relations. Los Angeles passed an ordinance banning discrimination and segregation in redevelopment projects. Toledo, through a cooperation agreement between the city and the local housing authority, prohibited discrimination and segregation in new low-rent public housing projects. Cincinnati's city council outlawed discrimination in its redevelopment and relocation program. Pontiac, Michigan's, housing authority issued regulations based on a former city ordinance that forbids discrimination or segregation in all public low-rent housing in the city.

Regulatory Measures. Growing interest in regulation of housing through housing codes setting up minimum standards for health and safety and by rehabilitation programs was found in at least a half-dozen cities during the year. Norfolk and Kansas City, Missouri, both passed comprehensive housing codes. St. Louis, Memphis, Boston, and Pasadena (California), either undertook programs of clean-up and rehabilitation or started comprehensive plans for such programs. Baltimore continued its "Baltimore Plan" attack on housing and Philadelphia's "Operation Fix-Up" program also continued to make strides through the year. New York state late in the year issued a state building construction code applicable to one- and two-family dwellings.

Professional Organization. The broadening scope of work of the National Association of Housing Officials (1313 East 60 Street, Chicago 37) in housing and redevelopment administration was emphasized by the organization of a Redevelopment Section to coordinate redevelopment activities and to serve as a clearing house on redevelopment problems. The Technical and Maintenance Section of the Association, organized in 1950, highlighted its year with an exposition of housing operating problems and treatment methods held in Washington, D. C., during the Association's annual conference there. As a means of recognizing outstanding public administration in housing and redevelopment, the Association in 1951 initiated annual awards to the individual ajudged to have contributed most to housing and redevelopment during the year and to three local authorities that represented the best in public administration. Annual awards also were made to local authorities for the best annual reports. Much of the Association's activity centered around the work of the Federal-Local Relations Committee and the Redevelopment Committee, both of which met numerous times during the year with Washington officials to work out solutions to problems arising in administration, development, and management of housing and redevelopment under the Housing Act of 1949 and to confer on the financial assistance contracts under which 1949 housing act projects would proceed. At the close of the year the Association had 420 agency members, 2,399 individual members, 148 subscribers to the RIS Newsletter, and 368 independent subscribers to the Journal of Housing.

Public Works

Developments in 1951

BY ALLEN L. SANDBERG

Director of Research, American Public Works Association, Chicago

PUBLIC works improvements suffered heavy setbacks during 1951 because of material shortages and high construction costs created by the defense effort and the inflationary spiral. Emphasis was placed on completing projects underway and finding ways and means to cut operational and maintenance costs of present facilities. Even under such difficult conditions, state and local public works activity was at an all-time high of almost six billion dollars in new construction. New peaks were registered in 1951 in the construction of school, hospital, electric light and power (private and public), and state and local sewage disposal and water supply facilities.

Labor and material shortages and high prices provided stimulus for new ideas in construction work especially that of highway and bridge construction. A European innovation, prestressed concrete, has found increasing favor in bridge and building construction in this country. Precast concrete has facilitated work during winter months and has given better results than field construction because conditions are more controllable at the precasting site. Snow sheds, culverts, and bridges are some of the facilities constructed by this method. It is expected that precasting and prestressing concrete will become more widespread once methods are developed and tested and economies are shown. Prestressed concrete buildings offer municipalities the opportunity to build their city hall, sewage plant, or other structure during the steel shortage at a possible saving.

Highways. Toll roads and freeways (although many are still in the planning stage) are rapidly being completed in many states and cities. The possibility of driving from Chicago to New York, Boston, or Washington without halting for stop lights and without dangerous intersections is expected to be a reality in the not too distant future. The New Jersey Turnpike, opened to traffic on December 18, 1951, created an important link between Washington and New York. An extension of the Pennsylvania Turnpike to the Ohio boundary was completed and several other projections of the road started. New York has started its throughway system which will link with those of New Jersey and Massachusetts. Many of the major cities have opened their freeways to traffic.

Although less money was spent for highway construction in 1951 than in 1950, rapid expansion of planned municipal and state highway programs was hampered by material shortages and high costs. Expressway construction in cities where property is built up has been slow because of the difficulty in obtaining rights-of-way as well as material procurement difficulties.

Principal problems in the nation's highway picture are the congestion on outmoded municipal traffic facilities and the financing of municipal street programs. Surveys show that motor vehicle traffic is predominately local, short-run traffic—with 85 per cent of most trips less than 20 miles and 95 per cent less than 50 miles. Yet in most states the allocation to municipalities of state-collected, locally paid highway taxes (licenses, gasoline tax, etc.) has been too small to aid properly in maintaining their primary streets as well as aiding the maintainence of secondary streets and assisting in providing for new construction. Although the Federal Highway Act of 1950 provided for the use of federal funds to pay 50 per cent of the cost of land acquisition and permitted cities to sell bonds payable in part from future state and federal aid, these advantages have been almost nullified by inflation costs.

Many cities are seeking a low-cost pavement that will last longer and be cheaper to maintain. A development in paving that has interested many officials is the use of rubber (both synthetic and natural) in bituminous wearing courses. Although still in the experimental stage, rubber roads show promise as being a long lasting pavement of skid resistant qualities. Playground areas have also been considered as a use for the new-type pavement.

Airports. Airport construction has decreased after the postwar surge in the construction of these facilities. However, the advent of the jet age is causing considerable re-evaluation of present facilities. New materials and designs for runways and aprons appear to be necessary for the high speeds and temperatures of jet planes. Many officials with an eye to the future are planning for the expansion of present facilities or for the creation of new sites and the modernization of equipment to meet the demands of jet aviation.

One of the biggest problems confronting municipalities is making their airports self-supporting. Airline fees and space rentals do not pay for the cost of running an airport. Small cities find that maintenance costs are keeping airport operations in the red and many are re-examining the community's need for air facilities. Larger cities are faced with a different problem, for several cities find themselves cramped for space not only for runway facilities, but also for terminal quarters because of the increase in air travel and the increased use of air freight services.

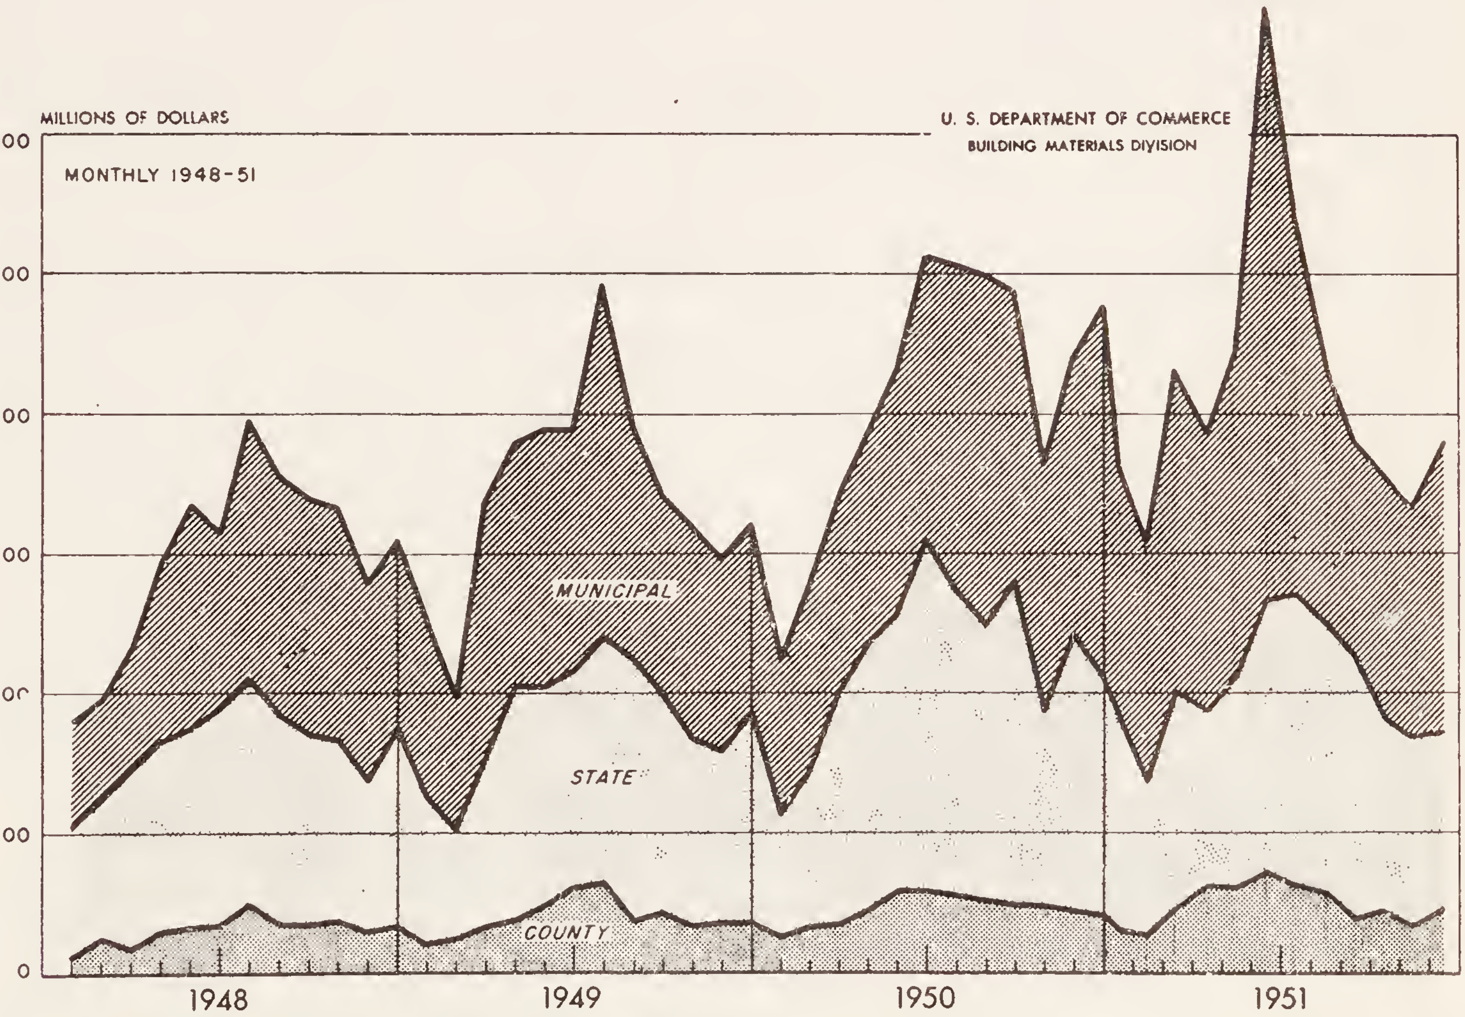
Airport design has moved toward a co-ordinated pattern on a national level with the establishment of the Civil Aeronautic Administration's uniform airport standards. The CAA has attempted to aid communities in the development and planning of their airports so that these facilities will properly fit into the national plan.

Street Lighting. More attention has been given to street lighting as a remedy to night traffic accidents and crime. Modern installation of mercury-vapor lamps and modern lamp standards have been made in cities throughout the country as it became obvious that lighting systems were far from sufficient for safe night driving.

Sewage Treatment Facilities. Despite difficulties of shortages and financing, sewage treatment plants rated top priority as a public construction need. Publicity and the enforcement of pollution abatement laws by state health departments and "river basin authorities" like the Ohio River Valley Water Sanitation Commission, have contributed to the increased construction of treatment facilities. Most communities now recognize that protection of the nation's water supply is a co-operative measure. Chief obstacle in building a treatment plant is its cost especially when so many other public works needs have yet to be fulfilled. Many industries are privately financing their own treatment plants thereby reducing the need for a larger municipal plant and also reducing the city's financial burden. Recovery of materials for re-use in manufacture has been a persuading factor in the development of private plants.

The discovery that sewage sludge contains the vitamin B-12, a highly potent promoter of animal growth, will have a decided effect on sewage sludge disposal methods. More cities are processing their sludge to manufacture fertilizer in an effort to help pay for the operation of the sewage treatment plant.

Still in the luxury class as a household item, the kitchen garbage grinder continued to increase in use. Some new communities and suburban developments have 100 per cent installation and many officials see the grinder as the eliminator of the garbage problem. However, the increased



Value of State and Local Public Works Contracts Awarded, by Governmental Jurisdiction, 1948 to 1951 use of packaged and frozen foods has decreased the amount of garbage and increased the amount of trash to be disposed, so refuse collections are not eliminated. Studies have yet to be made in communities which have a high percentage of garbage-grinder installation to determine whether present sewage facilities are adequate enough to meet the increase in sewage created by the use of grinders.

Equipment. More and more cities turned to mechanized operations as the manpower shortage and high costs continued to plague public works officials. Year after year it has become more obvious that hand labor is too expensive, too slow, and too inefficient for modern municipal public works functions. Even though equipment is expensive, more efficient and cheaper operations are effected and in certain functions like refuse collection and snow removal mechanized equipment is a necessity. Manufacturers and public works officials are constantly seeking to develop equipment to meet the general and special needs of municipal operations.

Increased use of equipment has created a problem for many cities large and small and that is the need for garage and maintenance facilities. Outdoor storage has caused delay in getting equipment into service during winter months because of freeze-ups. Cramped maintenance area has tied up equipment longer than necessary, but the construction of garage facilities has lagged behind the need. Some municipalities are contracting with garage and equipment dealers for maintenance services, while others find that equipment rental is the most economical procedure. Whatever the procedure, most cities are finding it difficult to finance needed new equipment and also to provide garage and maintenance facilities once the equipment has been purchased.

Personnel. A serious drain of engineering talent has been made on municipal public works departments. Many men have left city employment for more lucrative income in private industry. Few replacements were available and engineering schools reported lower enrollments so that future graduating classes are expected to be insufficient to fill the number of future engineering jobs that will be available. In-service training has become a necessity for many cities and the ICMA reports greater use of its on-the-job training courses in Municipal Public Works Administration. One healthy development created by this lack of personnel has been the increased movement of public works men from city to city. More communities have let down their local residence barriers and public works men are proving they can do a good job in any city.

Administration. Some small cities and towns turned to contractors to handle their services—particularly the function of garbage collection and refuse disposal. Heavy labor turnover and the high cost of training new personnel have been the main reasons for this change. Several cities report economical results from this contractual arrangement.

As suburban developments increased the problem of disposing refuse has become more serious. Dumps and sanitary landfills have been moved far from collection points so that trucks must make long hauls to dump their load. This is not only expensive but it also keeps equipment out of service and thus increases collection time. Michigan passed a law permitting cities to form an authority for the purpose of jointly building and operating an incineration plant, thereby eliminating the problem of long hauls and each city financing its own plant.

The increased operating cost of refuse disposal also has made many municipal officials conscious of salvage. Efforts have been made to recover tin cans, rags, and other materials for resale to help meet the cost of refuse disposal. Several communities have established contracts with salvage companies which allow these companies to operate at city dumps and incinerators to reclaim scrap and other materials.

Providing water and sewerage service to areas outside the city limits is another problem that city officials re-examined in a new light. Several cities set up an agency or empowered the planning commission or public works department to determine where, when, and how much service should be extended. Existing rates were also re-examined and moved upward to meet increased operating costs. The main reason for establishing an extension policy is to encourage conformity to city standards so if the area is later annexed the water and sewerage systems will not have to be abandoned because they proved inadequate.

Professional Organization. The American Public Works Association (1313 East 60 Street, Chicago 37) continued in its 57th year to serve the public works official as a clearing house of information on all phases of public works. Membership continued its upward trend. Publications included Special Report No. 13, "An Evaluation of Household Food Waste Disposers," the Public Works Engineers' Yearbook-Directory, the 1951 Public Works Congress Proceedings, and the monthly Public Works Engineers' News Letter. During 1951 the Association continued its efforts to assist public works officials to improve their administrative procedures and practices.

Municipal Utilities

Developments in 1951

By John Bauer

Director, American Public Utilities Bureau, New York

THE 1951 public utility developments were largely of the same order as those of the year before. There were normal expansions, extraordinary projects, and extensive rate increases, due primarily to the impacts of inflation which has been accentuated by the national defense program.

Inflation has hit most seriously in transit and telephone rates. Transit companies have not only been subject to advancing wages, which constitute a much higher proportion of total costs than for other utilities, but also to diminishing traffic caused by mounting automobile travel, and by consequent service deteriorations. This situation calls for special municipal policies and administrative measures to modernize service, to induce people to use mass transportation instead of automobiles, and so to eliminate or reduce street-traffic congestion.

The telephone companies also have been subject to fast increasing costs, partly due to wage rises and largely to costly or uneconomical plant expansion. The Bell companies have been mostly on their third and fourth rounds of rate increases since the war. Municipalities have commonly intervened, including joint intervention through leagues of municipalities or otherwise as reported from Virginia, Colorado, and Wisconsin. An important new factor in the determination of intrastate or local rates is the projected revision of the so-called Separation Manual for allocation of costs between interstate and intrastate business. With the changes agreed to by the Federal Communication Commission, approximately $82,000,000 of plant investment and $17,000,000 of operating expenses will be transferred from intrastate to interstate operation, for the benefit mainly of local exchange rates.

Electricity and gas have been subjected less to rate increases than transit and telephone utilities, but they too have been moving upward. For example, the natural gas utilities under the jurisdiction of the Federal Power Commission made 48 filings of proposed rate increases during the fiscal year ended June 30, 1951, which involve more than $22,000,000 a year, but most are under inquiry as to their justification. The companies have had the benefit of rapid expansion. During the fiscal year the FPC authorized new pipe line construction of over 30,000 miles at an estimated cost of nearly $2,000,000,000. For the year ended October 31, 1951, natural gas sales had increased about 19 per cent over the preceding 12 months, while revenues had advanced 21.5 per cent. However, operating costs and taxes had risen 24.3 per cent; net income to the companies, after all income deductions, had increased less than 1 per cent, as against additional net-plant investment of over 19 per cent.

Electric expansion too proceeded rapidly. According to the FPC, at the end of November 1951, total electric utility installation had reached 75,184,000 kw, an increase of 7,209,000 over the year before, or 10.6 per cent. For the 12 months the record production was nearly 368 billion kilowatt hours, an increase of 13.2 per cent. The fast expansion and rising costs have precipitated a surge of rate cases.

A quick summary of utility developments and rate changes is presented here, first for the larger cities and then for the smaller municipalities for which reports have been received. Concluding consideration will be given to needs of regulatory improvements for joint protection of consumer and investor interests, especially under the conditions of inflation and fast-rising costs.

Buffalo. No rate changes in electricity or gas. Telephone pay-station calls advanced from 5 cents to 10 cents. Industrial and commercial metered water rates increased 32 per cent. Bus fares lifted from 12 to 12-1/2 cents or two for 25 cents.

Cincinnati. This was the historic year which marked the end of street railway operation, with complete conversion to trolley and motor buses. Cash fares were increased from 15 to 16 cents, and tickets from 14-1/2 to 15-1/2 cents. The city succeeded in getting FPC approval for construction of new pipe lines needed for additional natural gas supply; until construction is completed in 1952, natural gas will not be available for new space-heating installations.

Columbia (South Carolina). The new city manager government has intervened in regard to the justification of the proposed increase in electric rates, pending before the state public service commission. The city has engaged special counsel and experts to see that the public side is properly prepared and presented.

Dallas. Electric rates were increased about 11 per cent. The basic transit fare was fixed at 15 cents, but passengers may still ride at the token rate of 11-2/3 cents. This was the fifth fare increase since the war. With an 11 per cent increase in the number of gas customers, there was no increase in domestic and commercial rates, but the new state gathering tax (which amounts to about 6 per cent of the prevailing fixed price) has been placed upon the industrial consumers. The Southwestern Bell Telephone Company is seeking a rate increase, but no determination had been made at the end of the year. The city-owned water department is nearing completion of a 96-mgd water treatment plant; water rates were increased about 20 per cent.

Detroit. Transit fares for school children were raised from 5 to 10 cents, and express bus fares from 15 to 20 cents, no other rate lifts. Transit and water are municipally owned. The water department is working on a development project of $20,000,000 scheduled for completion in 1955.

Houston. The water supply program that has been long in the planning stage has been brought to the actual starting point—construction of the San Jacinto Dam, creating a 13,000-acre lake extending 20 miles upstream, and a filter plant that will handle 50 million gallons of water daily. The cost of the entire project is estimated at $21,500,000. Completion will require at least two years. Needed steel supply has been assured by the NPA. No rate increases, but applications for telephone and gas increases were pending at the close of the year.

Jacksonville (Florida). The municipal electric department actually reduced rates; for example, the monthly residential bill for 100 kilowatt hours was cut from $4.60 to $4.22. The department has practically completed a $ 15,000,000 expansion program including a new 60,000 kilowatt plant. The city council removed the 10 per cent utility tax on electricity, water, gas and telephones.

Kansas City (Missouri). An increase of about 10 per cent in electric rates and 20 per cent in water rates, but a reduction of 10 per cent in gas rates in the northern portion annexed to the city on January 1, 1950. Rate cases pending involve 25 per cent increases in telephone and transit rates.

Knoxville. The city owns the electric, gas, and water systems, and has put through an extensive expansion program. In 1950 the gas system was converted from manufactured to natural gas; rates were then reduced about one-third; and consumption has since increased about five times.

Memphis. The city owns the electric, gas, and water systems for which there were no rate changes. It started construction of the Thomas H. Allen pumping station which will cost about $6,000,000. Telephone rates were increased and transit fares were advanced from an average of 8.5 to 9.7 cents.

Milwaukee. The city owns only the water system, which initiated a fluoridation program, with equipment costing $50,000, and operation $25,000 per year. Fluorine salt will be mixed with water at the rate of one part fluorine to one million parts water. There were two increases in transit fares: in March the weekly pass was advanced from $1.60 to $2.00, and the cash fare from 13 to 15 cents; in October a further 40-cent increase was allowed in the weekly pass, and the sale of tickets (7 for 90 cents) was discontinued. There were pending natural gas, electric, and telephone rate cases before the state public service commission.

Minneapolis. A 23-year franchise extension was granted to the local, privately owned gas company. The city will receive 1.6 per cent of the gross revenues for the use of the streets. The basic allowable return was reduced by $50,000. Rates were lowered approximately 4 per cent for the typical domestic consumers.

Newark. The city owns the water system and spent nearly $1,000,000 for extensions. It increased rates between 16 per cent and 20 per cent. Transit fares were advanced first from 5 to 7 cents, then to 8 cents, and there is pending a petition for a 10-cent fare.

Oklahoma City. The city owns the water system and has been engaged in a large expansion program; no water rate increase. There has been a 10 per cent increase in local telephone rates; transit fares were not changed, but in 1950 cash fares were advanced from 10 to 15 cents, and token fares from two for 15 cents to two for 25 cents; a zone system of fares is under consideration. Both the telephone and gas companies are seeking further rate advances.

Pasadena. The municipal light department's report for the fiscal year ended June 30, 1951, gives impressive results for the inflationary year. Its gross electric revenues totalled $3,478,000, an average of 1.79 cents per kilowatt hour. After all operating costs and income charges, including $ 440,000 contributed to the city, it had a surplus of $564,000 for the year. Not bad!

Philadelphia. The city completed about 50 per cent of its $32,000,000 water works improvements, and started a $36,000,000 program for improved gas works. Trackless trolleys have replaced buses and street cars on some of the surface lines. Work continued on the extension of the Market Street subway in West Philadelphia, involving $30,000,000.

Portland (Oregon). It was confronted for a time with an electric power shortage because of protracted drought, with the prospect of rate increases due to necessary steam generation. This situation, however, was relieved by rains and restored water supply for hydro-electric generation. A telephone rate case has been pending, without decision at the end of the year. Gas rates are pegged to the price of Diesel oil and so are variable. The transit company, losing patronage, has requested a fare increase from 15 to 16 cents.

Providence. Its only municipally owned utility is water, which serves also nearby communities; its chief development has been a 23,000 foot 30-inch truck line to reinforce the supply system. Plans have been completed for fluoridation. The rates established in 1923 are still in effect.

Richmond (Virginia). The city owns the water and gas systems and has been engaged in an active expansion program.

St. Louis. The city completed plans for modernizing its primary water pumping system. There were no rate increases, but a petition for a 27 per cent increase in natural gas rates is pending before the Federal Power Commission, also one before the Missouri Public Service Commission for an advance of about 20 per cent in telephone rates.

St. Paul. It has had normal growth in utility demands and facilities. Transit has suffered decline in patronage, but the company was denied an increase in fares. Water rates were raised about 5 per cent.

San Diego. The municipal water department spent $2,000,000 for distribution system and general improvements. In addition it completed a new filtration plant at a total cost of $3,700,000. No rate increases for electricity, gas, and water; approximately a 5 per cent increase in telephone rates and 24 per cent in transit fares. The city is advertising for a transit franchise.

San Francisco. Progress on construction of the San Joaquin pipe line No. 2 has been continued. This is to supplement the existing line in the San Joaquin division of the Hetch Hetchy Aqueduct, and will increase available capacity from 62 to 135 million gallons daily. The city is proceeding also with the Cherry Valley dam project. The city's transit modernization program, for which $20,000,000 bonds were approved in 1947, is nearing completion; some street car lines were converted to trolley coach operation. Gas rates were increased 11.5 per cent in February and 8.4 per cent in October.

Syracuse. No change in water, electric, and gas rates; but gas rates were reduced 7 per cent in 1950. Telephone rates were increased about 11 per cent. Transit token rates at 9 cents were replaced by a straight 10-cent fare.

Worcester. The municipally owned water system installed a 10,000-foot 16-inch water main to connect new housing projects; it raised the rates to domestic consumers about 16-2/3 per cent and about 55.6 per cent to manufacturing concerns. There were also electric, gas, and telephone rate advances.

Nebraska. The voters of York gave overwhelming approval for the city to purchase the water system of the York Water Company, which is reputed to be the only private water corporation serving municipalities in the state. Lincoln, the state capital, has a serious controversy with the local transit company, which has been granted a 10-cent fare, but still claims an operating loss and is confronted with a strike; it has given notice of its intention to cease operation, so the city is confronted with the problem of what course to adopt. Five Nebraska cities are planning for municipal gas distribution: Hastings, Nebraska City, Punca, Alma, and Pender.

Colorado. The home-rule cities, most of the larger municipalities, have had local control over public utility rates. A constitutional amendment will be voted on in November, 1952, which, if approved, would transfer utility regulation to the state public utilities commission. The Colorado Municipal League adopted a resolution at its 1951 convention in opposition to the amendment. Meanwhile, Pueblo has had a study made of the local electric and gas rates and is considering a program of systematic-home-rule regulation.

Iowa. The cities have been active in making improvements in water works, sewage disposal, and municipally owned electric systems. Cedar Rapids, Burlington, and several others voted bond issues to enlarge or improve their municipal water works. Des Moines voters approved placing the management of the municipal water works in the hands of a board of trustees. Cedar Falls improved its municipal power plant by the purchase of a $450,000 steam generating unit. Keosaqua added a Diesel generating unit at a cost of $70,000 to its municipal plant.

Michigan. Lansing voters approved a charter amendment creating a transit commission of three members, whose duty will be to establish reasonable rates for all public carriers not subject solely to the jurisdiction of the state public service commission. Water service expansion and improvements have been reported by Blissfield, Big Rapids, Grand Rapids, Concord, Flat Rock, Grand Haven, and Plainwell. Substantial electric improvements have been installed in Allegan and Grand Haven. Harbor Springs adopted an ordinance creating a "lien" as security for collection of any public utility (1) rate, (2) assessment, (3) charge, or (4) rental.

Ohio. The general assembly enacted a water pollution control act, applying comprehensively to state agencies, municipalities, and other political subdivisions, as well as to persons and corporations. A board is established with power, after hearings, to issue orders prohibiting the discharge of sewage and requiring the construction or modification of disposal facilities.

Oregon. Because of the unusually dry summer cities have been confronted with water shortages and needs of additional water supplies. Portland has initiated construction of a new 25-mile line to bring water from its Bull Run source of supply. The cities of Medford, Bend, Silverton, Grant's Pass, Reedsport, Coquille, Eugene, Cottage Grove, Astoria, Redmond, Sweet Home, North Bend-Coos Bay, Medras, Joseph, Tualatin, and Pilot Rock have reported plans for additional supplies and improvements.

South Dakota. Legislation has authorized municipalities to purchase electricity from outside their limits, to sell electricity to the outside, to maintain transmission outside, and to enter into contracts with the federal government for the purchase of electric energy, including energy for resale.

Texas. The legislature authorized 10 cities in North Texas to form a water control and water improvement district for the purpose of developing water supply for those 10 cities. A similar district previously authorized is getting under way in West Texas.

Wisconsin. Following an informal postcard referendum conducted by the city council, the voters of Fort Atkinson rejected a proposal to have the city purchase the bus system.

The Tennessee Valley Authority. Not even the low-cost power agency has been able to "duck" the impact of inflation. TVA has been conducting a series of conferences with a committee appointed by the TVA Power Association—distributors of TVA power—for the consideration of adjusting rates to increasing costs, especially in view of extensive new construction of steam generating capacity to supplement the hydro-electric power. Moderate increases have been agreed to as affecting industrial power consumers, for whose benefit the steam-generating capacity is deemed to be particularly needed.

The foregoing survey indicates how municipalities have been hit by inflation in regard to utility rates. This experience has further accentuated the need of modernizing the standards and procedures of regulation, so that rates can be promptly adjusted according to exact showing of facts, without protracted hearings and inconclusive or dubious decisions. The need applies not only to regulation by state commissions, but also and particularly to home-rule cities, which are mostly stymied in exercising their local power to fix rates.

Some cities, however, are striving to make home-rule regulation effective. For example: Pueblo, Colorado, is considering a precise regulatory program for electric and gas rates. Jackson, Mississippi, is likewise working on systematic control of transit fares and service. New Orleans is striving similarly for definite regulation of all utilities under local jurisdiction.

All home-rule cities can establish exact and systematic manageable regulation at very moderate cost if they adopt appropriate programs. Cities subject to state regulation can also get modernized effective systems through cooperation and pressures exerted on the commissions and legislatures, if they concentrate on exact program; nothing radical is involved. Rates in general are based on cost of service as shown by the accounts and records of the companies. This principle applied throughout, except that one factor—return to investors—is left in the vague-obscure state of undefined fairness.

The companies are held to be entitled to a "fair return" or to a "fair rate of return" on the "fair value" or "rate base," without precise definition and measurement of what is fair; hence there are the inevitable conflicts between private and public interest, the unwieldiness of regulation, and extensively the sacrifice of public interest. Regulation as constituted remains in the horse-and-buggy stage of dealing with modern economic interests in the vastly important local-monopoly industries—and the public mostly gets the rough part of the ride.

The problem of modernizing regulation consists chiefly of converting the indefinite-return provisions into exact-cost categories. This can be done without economic subversion or confiscation. It is intrinsically a simple matter, but even an outline of the necessary procedure is beyond the space limits here. To get effective regulation is one of the prime policy and public-administration jobs awaiting municipal attention.

City-Owned Electric Utility Data

A TOTAL of 402 cities or 83 per cent, of the 487 cities over 5,000 population which have municipally-owned electric utilities, provided information for the 1952 Year Book on their electric plant. Not included in the total of 487 electric utilities are 12 utilities which are owned or operated by counties, special districts, or other units of government, or serve less than 10 per cent of the customers in their area. Information on the salary and selection of utility superintendents and contributions to city government was obtained from city officials early in 1952 while other data were taken from Federal Power Commission reports. Table XII lists all 402 reporting cities and specific data on salary and selection of utility superintendents; type, capacity, and value of electric plant; annual operating revenues and income; gross long-term debt; contributions to the city government; and electric utility rates. This article summarizes the individual city data in Table XII.

Utility Organization. Electric utilities are managed by public utility boards in 134 cities. Over one-half of these boards (68) are appointed by the city council, an additional 49 by the mayor, and four by the city manager. Board members are elected in 10 cities, and in three cities the board is self-perpetuating.

The city council appoints the utility superintendent in one-third of the cities reporting and the utility board appoints him in an additional one-third. The city manager appoints the superintendent in 20 per cent of the cities, and the mayor in the remainder. In larger cities, the superintendent is more often appointed by a board, while in the smaller cities he is more often appointed by the city council. Salaries of electric utility superintendents are summarized in Table 1. The median salary is consistently above that for city engineers and directors of public works in comparable population groups (see Table VI).

Operating Data. A total of 181 cities (45 per cent of those reporting) have no electric generating plant and purchase all electricity distributed. An additional 72 cities purchase part of their electricity. Of these 72 cities, seven purchase from 75 to 99 per cent of their distributed power, 12 buy from 50 to 74 per cent, 14 buy from 25 to 49 per cent, and 39 buy from 1 to 24 per cent.

TABLE 1

SALARIES OF ELECTRIC UTILITY SUPERINTENDENTS: 1952

Population Group	No. of Cities Reporting	Mean Average Salary	Distribution of Salaries				
			Lowest	Lower Quartile	Median	Upper Quartile	Highest
Over 100,000......	6	$16,207	$9,000	....	$13,568	....	$28,829
50,000 to 100,000 ...	7	10,439	6,866	....	8,441	....	21,243
25,000 to 50,000....	29	7,586	5,000	$5,726	7,200	$9,900	12,000
10,000 to 25,000....	100	6,607	3,600	5,370	6,314	7,500	12,500
5,000 to 10,000.....	158	5,493	2,921	4,440	5,200	6,225	13,800

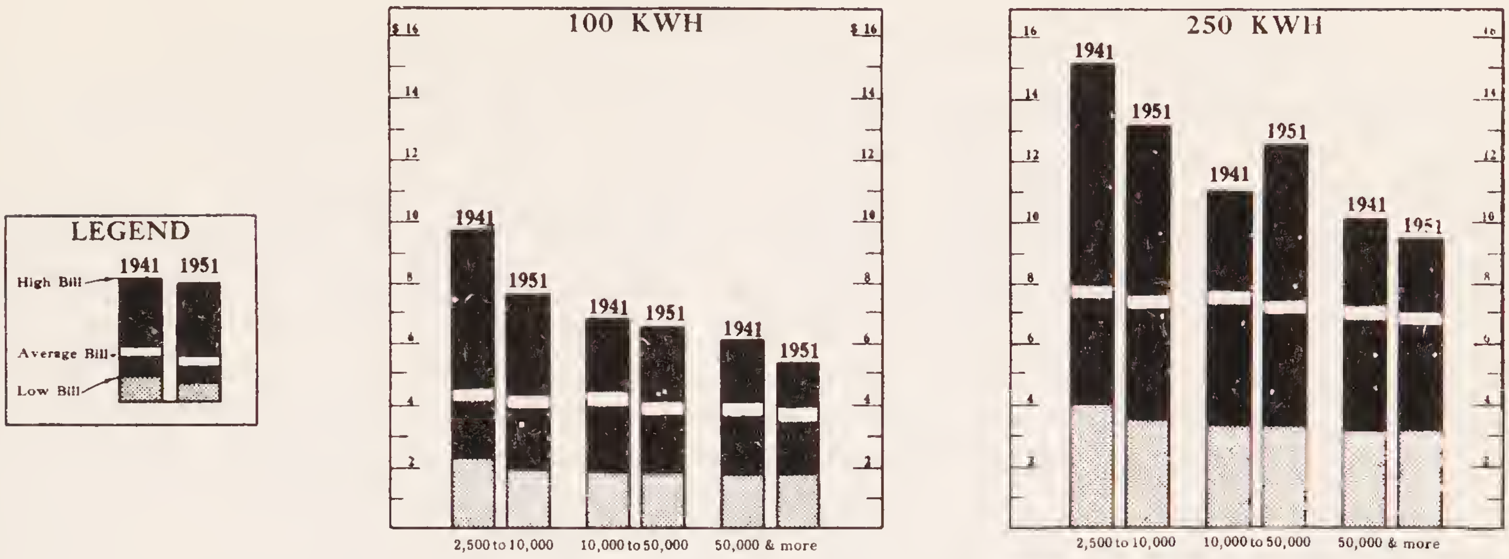
A total of 138 cities (36 per cent of those reporting) have no electric utility debt. In the other 242 reporting cities, debt ranges from $500 to over one million dollars in many of the larger cities.

Payments in lieu of taxes and other contributions to city government were reported by 232 cities and range from $2,100 to over one million dollars. Nineteen of these cities reported that all profits of the utility are transferred to the general fund. In 77 cities the utility makes no cash contribution to the city government. Contributions consist of cash payments only and, where possible, exclude contributions of service (street lighting, electricity for municipal purposes, etc.).

Electric Utility Rates. Monthly rates of electric utilities for typical usages are presented for individual cities in Table XII. The Federal Power Commission report, "Typical Residential Electric Bills: 1951," gives the following average monthly bills for electrical service in all cities in the United States over 2,500 population:

	100 kwh	250 kwh
Over 50,000 population	$3.62	$6.76
10,000 to 50,000 population	3.86	7.15
2,500 to 10,000 population	4.04	7.32
All cities over 2,500............	3.74	6.95

These figures can be used in comparison with the individual city rates in Table XII. They indicate that rates generally are higher for comparable service in the smaller cities. Sales taxes are not included in the rate data shown in Table XII.



Source: Federal Power Commission

LOWEST AND HIGHEST TYPICAL MONTHLY BILLS FOR RESIDENTIAL ELECTRIC SERVICE, 1941 AND 1951

EXPLANATION OF COLUMN HEADS IN TABLE XII

Superintendent—Salary;—How Appointed—Annual salary as of January 1, 1952; for appointment, see code in table headnote.

Plant—Capacity (KW); Type—Total kilowatt-per-hour capacity of all plants owned by the city; for type of plant, see code in table headnote.

Value of Plant—Includes original cost of land, structures, generating equipment, accessory electrical equipment, reservoirs, dams, waterways, rights-of-way, towers, poles, overhead conductors, underground conductors, and roads and trails for the electric plant. Depreciation and amortization reserves have been deducted.

Total Annual Operating Revenues—Includes income from residential, commercial, and industrial sales; public streets and highway lighting; sales to other utilities, public authorities, and railroads; interdepartmental sales; rent, forfeitures, and penalties; servicing of customer installations; and miscellaneous electric revenues.

Annual Electric Operating Income—Includes total annual operating revenues plus net income from utility plants leased to others less operating expenses, depreciation, and taxes, including in-lieu payments. Operating expenses include production, transmission, and distribution expense, customer accounting and collections, sales promotion, and administrative and general expenses.

Gross Long-term Debt—Includes the face value of all bonds outstanding which the utility has issued and for which the utility has assumed payment, the face value of all receivers' certificates of indebtedness, real estate mortgages, notes and unsecured certificates of indebtedness, receipts outstanding for long-term debt, and other obligations maturing more than one year from date of issue or assumption.

Contributions to City Government—Includes gross payments in 1951 in lieu of taxes and other contributions. Where possible, contributions of service (street lighting, electricity for municipal purposes, etc.) are excluded.

Electric Rates—100 KWH—Average usage is for lighting, small appliances, and refrigeration; 250 KWH—Average usage is for lighting, small appliances, refrigeration, and cooking; 500 KWH—Average usage is for lighting, small appliances, refrigeration, cooking, and water heating.

Note: Definitions of accounting classifications are taken from the Federal Power Commission's "Uniform System of Accounts Prescribed for Public Utilities and Licensees" (1937).

TABLE XII

CITY-OWNED ELECTRIC UTILITY DATA FOR CITIES OVER 5,000

This table includes data for 402 cities out of 487 with city-owned electric utilities among cities over 5,000 population. Utilities have been excluded which serve less than 10 per cent of the customers in their area, or are owned or operated by counties, special districts, and other units of government. Information on salary and selection of utility superintendents and contributions to city government was obtained from city officials in early 1952. Electric rates were taken from the Federal Power Commission Report, "Typical Residential Electric Bills: 1951" and are as of January 1, 1951. All other information was taken from the Federal Power Commission Report, "Statistics of Publicly Owned Electric Utilities: 1950" and is for calendar year 1950 or the fiscal year ending in 1950. See preceding page for explanation of column heads. A single dagger (†) following the name of the city indicates that the city is also served by a privately owned utility. An asterisk (*) indicates that information was not reported in the FPC Report "Statistics of Publicly Owned Utilities: 1950" and was obtained directly from city officials. Leaders (. . .) denote information not reported; superscript numerals (1) refer to notes at end of table.

Fire Administration

Developments in 1951

By Percy Bugbee

General Manager, National Fire Protection Association, Boston

THE Committee on Fire Casualty Statistics and the fire record department of NFPA have been working on the obtaining of more accurate statistics on deaths and injuries from fires and are working toward the universal acceptance of a model reporting form for fire casualties. The best estimates from these sources for the fire fatalities during 1951 in the United States and Canada stand at 12,518. In the light of present knowledge of fire hazards and how to eliminate them, this is certainly a disgraceful record.

The preliminary estimates of property losses for 1951 are $823,500,000, of which $742,000,000 is in buildings and contents and $81,500,000 in outdoor fires such as fires in aircraft, motor vehicles, and forest and brush fires. These figures compare with a building and contents loss in 1950 of $699,600,000 and an outdoor fire loss of $76,840,000. The total dollar value of loss in 1951 was greater than any previous year in history, but of course such figures must be used with a full understanding of the effects of inflation. The actual amount of property destroyed probably was not any larger than the 1950 loss.

The fire record department of NFPA estimates that there were approximately 290 fires during 1951 with a loss of one-fourth million dollars or more. This compares with 243 such fires in 1950.

There were a number of individual fires that attracted widespread interest and attention during the year. The first of these occurred in Lansing, Michigan, on February 8 when the state office building was seriously damaged with a large loss of state records. While this fire was set by one of the employees, the construction and protection of the building were such that large damage ensued, this in spite of the fact that some years previously the state fire marshal had made recommendations pointing out the hazard of the building.

The second of these fires occurred in Montreal on June 15 in a Catholic hospice. This fire took the lives of 35 people and again was an example of poor construction and inadequate built-in protection.

The Newark, New Jersey, propane terminal fire of July 7 involved some 70 large tanks, each 70 feet long and 105 inches in diameter, and was perhaps the most spectacular fire of the year.

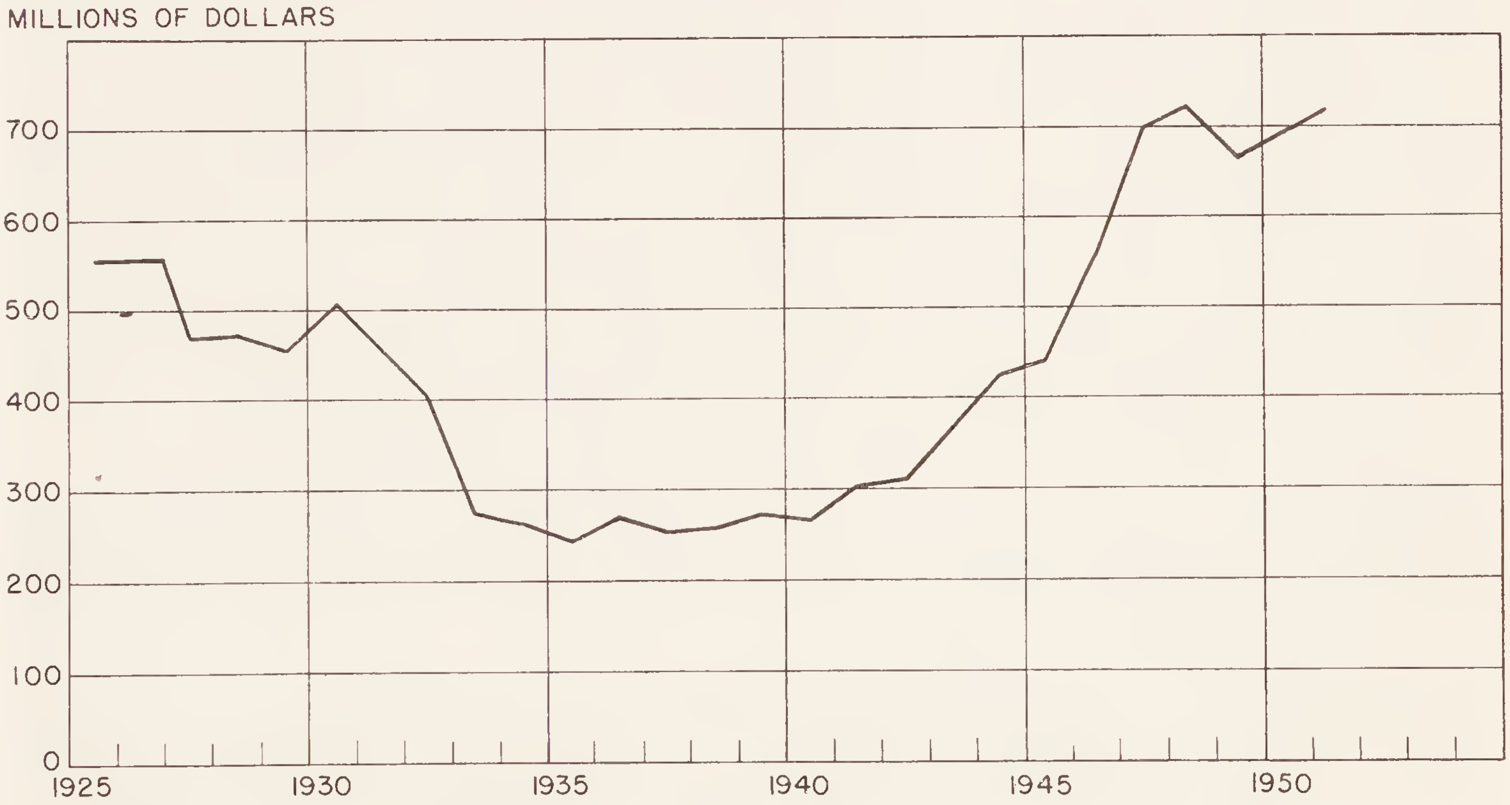
The series of gas explosions in Brighton, New York, a suburb of Rochester, on September 21 caused some death and injury and considerable destruction of a group of substantial dwellings and offered numerous interesting lessons to students of fire protection.

Fire Departments. So far as municipal fire departments are concerned, the number of changes in working hours and pay did not appear to be nearly as evident or pronounced as during the previous year. With the advent of the NPA and material controls, there arose considerable confusion and difficulty with respect to the purchase of municipal fire apparatus, and many cities found it difficult to place orders and to forecast when orders, if placed, would be filled. There are indications that this situation may be improved early in 1952.

The trend to more extensive and effective fire prevention work in fire departments mentioned in recent surveys has continued during the past year and was greatly stimulated by a special campaign for reduction of deaths to children in fires which was instituted by the International Association of Fire Chiefs. This campaign was specifically pointed at the inspection of dwellings by fire departments, a procedure that has proved highly effective in a good number of cities and one that can be carried on with no extra expense to the taxpayers. This movement should expand rapidly and become universally accepted by fire departments everywhere, because most deaths and injuries from fire and the greatest proportion of all fires occur in private dwellings.

Some fruitful conferences were held in 1951 between representatives of the building officials of the country and the city fire marshals and fire prevention bureau chiefs to iron out conflicts of jurisdiction which often exist between those two agencies.

Standards. A substantial body of new standards of particular interest to the states and cities were developed by various NFPA committees during the past year. The 1951 edition of the National Electrical Code made its appearance and was very widely adopted throughout the country. The new



Total Annual Fire Losses in the United States: 1925 to 1951

The annual losses are shown in millions of dollars. The loss figure for 1951 is provisional.

National Fire Codes issued by the NFPA on extinguishing and alarm equipment, building construction and equipment, and flammable liquids, gases, chemicals and explosives, embody all of the standards in these important three fields and are widely used as reference material for legislation. New standards on motor fire apparatus, on liquefied petroleum gases, and on oil burning equipments were developed and a new edition of the model flammable liquids ordinance made its appearance.

Interest in legislation controlling fireworks continued with new state laws adopted during the year in Oregon and Colorado. The city of Los Angeles adopted a comprehensive "dangerous chemical code" covering some 2,000 chemicals.

Fire Prevention. Great advances were made during 1951 in the field of public education in fire waste control. A very important development has been the issuance of the National Education Association or four manuals on fire safety prepared by teachers for teachers and covering primary grades, intermediate grades, junior high school, and senior high school teachers. The widespread acceptance of this material by teachers is bound to have a long-range effect upon the habits of people.

The acceptance by the Advertising Council of a campaign on home fire prevention with the NFPA as the sponsor secured during the past year valuable radio and television time and magazine and newspaper space for fire prevention on a scale never previously attained. This campaign is on a year-round basis and it is expected to gain increasing momentum during 1952.

Awards for excellence among cities for year-round fire prevention activity are made by the National Fire Waste Council in April of each year. The awards for 1950 for the various classes of population were to Houston, Texas; Atlanta, Georgia; Hartford, Connecticut; Bethlehem, Pennsylvania; Parkersburg, West Virginia; and Fort Collins, Colorado; with the city of Detroit, Michigan, emerging as the grand winner.

Fire Prevention Week in October was more widely observed throughout the United States and Canada than any year in its long history and thousands of communities filed entries with the NFPA in the contest. The grand winners in the United States and Canada were, respectively, Fort Wayne, Indiana and Ottawa, Ontario, and the winning cities by classes in their population groups were: Chicago, Louisville, Fort Wayne, Alameda (California); Tuscaloosa (Alabama), and Atlantic (Iowa). For Canada: Ottawa, Hull, Arvid (Quebec), Kenora (Ontario), Kentville (Nova Scotia).

A unique development in the field of publicity during the year was the conducting of a joint contest for fire photographs by the NFPA and the National Press Photographers' Association. This contest aroused great interest and resulted in a large and valuable collection of spectacular and educational fire photographs.

Civil Defense. The situation with respect to civil defense is of special interest to fire authorities because of the great importance of the fire aspects of modern warfare. Civil defense developments of 1951 were extremely spotty with rather spectacular strides being made in individual states and cities but with an over-all lag and apathy that was evident throughout the year. It is safe to say broadly that the civil defense authorities, particularly on the federal and state levels, have not for the most part created public awareness and enthusiasm for a real civil defense effort in this country. It is to be hoped that during the coming year the public can be made to realize that cities are subject to a devastating attack because of new developments in weapons which radically change the whole concept of war. Should this country ever be subjected to such an attack, numerous and large-scale fires would be inevitable. Fortunately the training of the population in simple fire fighting measures is sound and constructive whether or not there should be an attack.

Other Developments. Special new developments of the year initiated by the National Fire Protection Association included the program in the field of control of the fire hazards of flammable liquids instituted in the late fall of 1950 and carried through in 1951 with conspicuous success.

The new Society of Fire Protection Engineers launched by the Association in the early spring of 1951 has aroused widespread interest among fire protection engineers. This society is intended to bring recognition of the importance of this special branch of engineering and its recognition by the state licensing boards and by others concerned with fire protection problems.

Perhaps the most useful and practical of all special publications for fire inspectors of all kinds is the NFPA Fire Inspection Manual which made its appearance during the year and which is widely used.

Fire Department Statistics

THE chief municipal activity measured by general fund expenditures and payroll is public safety—the work of the city's police and fire departments. Detailed statistics on police and fire departments in cities over 10,000 population have been compiled to assist city officials in analyzing administrative problems. Table XIII shows individual city data for cities over 25,000 population on the number of fire department employees, hours of work and overtime policy, salaries of fire fighters and fire chiefs, vacation and sick leave policies, expenditures, fire losses and insurance classifications. The same data, except for fire losses, are shown in Table XIV for cities between 10,000 and 25,000 population.

These data are analyzed and summarized in this article to enable city officials to make comparisons as to costs, performance, and accomplishments of municipal fire departments. The fire insurance classifications give an indication of the fire hazard, while the classification of the fire department measures the adequacy of equipment and manpower by the standards of the National Board of Fire Underwriters. Fire loss comparisons may be indicative of the general effectiveness of the fire department's activity.

Number of Fire Department Employees. The average (median) city over 10,000 population employs 1.17 full-time fire department employees for every 1,000 inhabitants. Cities in the 100,000 to 250,000 population group have the highest average with 1.52 employees per 1,000 population;

cities between 10,000 and 25,000 have the lowest average with 1.00 fire employee per 1,000 population (see Table 1). These data are not directly comparable with data reported in the 1951 Municipal Year Book because preliminary census figures were used to derive the number of fire fighters per 1,000 population for 1951, while final census figures are used in the 1952 Year Book.

The number of full-time paid firemen, officer, and civilian employees are shown for each city over 10,000 in Tables XIII and XIV; the number of volunteers and call men is also shown for each reporting city between 10,000 and 25,000 in Table XIV. Volunteers and call men, however, are not included in the derivation of fire department employees per 1,000 population.

Table 1 shows the medians and statistical distribution of fire department employees per 1,000 population. In most cases data reported for the 1952 Year Book are somewhat higher than those reported for the 1951 Year Book. The wide variation in the number of fire department employees per 1,000 population is attributable in part to variations in manpower in different cities of approximately the same size which, in turn, is based on the amount of property to be protected and the areas and kinds of fire risk.

Method of Appointment of Fire Chiefs. Table XIII shows for each city over 25,000 population, the authority making the original appointment of the fire chief. The fire chief is appointed by the city manager in 132 cities, by the mayor in 86 cities, by the city council in 84 cities, by a fire or safety board in 46 cities, and by a fire or safety commissioner in 38 cities.

Fire Department Salaries. The salaries paid to uniformed fire department employees and fire chiefs are shown for individual cities in Tables XIII and XIV and the statistical distributions for city population groups for 1952 are summarized in Table 1. The median annual entrance salary for firemen ranges from a high of $3,500 in cities over 500,000 to $2,911 for cities of 10,000 to 25,000 population. Maximum salaries are also high in the larger cities; the median maximum salary ranges from $4,178 in cities over 500,000 to $3,168 in cities between 10,000 and 25,000. These figures indicate an increase in both entrance and maximum salaries of $300 to $400 per year in all population groups. The median annual salary for fire chiefs ranges from $9,666 in cities over 500,000 to $4,068 in cities of 10,000 to 25,000.

Hours of Work. Information on hours of work per week and hours of work on the day shift, as shown in Table 2, were obtained from city officials late in 1951 and are shown for cities over 10,000 in Tables XIII and XIV. The average work hours per week for municipal fire departments have remained unchanged at 72 hours since 1947. Table 2 shows that 72 hours per week is the average in all cities under 100,000 population. Reductions in the work week by a number of cities over 100,000 have resulted in a lower average work week for these cities; cities between 250,000 and 500,000 now work 67 hours compared with 72 last year, and cities between 100,000 and 250,000 now work 71 hours compared to 72 last year. The number of hours worked per week is determined by the number of hours

TABLE 1

FIRE LOSS, FIRE DEPARTMENT EMPLOYEES, AND SALARIES IN CITIES OVER 10,000 BY POPULATION GROUPS

Population Group	No. of Cities Reporting	Lowest	Lower Quartile	Median	Upper Quartile	Highest
FIRE LOSS PER CAPITA (1951)						
Cities Over 500,000	14	$1.35	$1.85	$2.58	$3.04	$9.39
250,000 to 500,000	21	1.19	2.02	4.04	5.68	9.27
100,000 to 250,000	58	0.51	2.13	3.09	4.46	9.24
50,000 to 100,000	112	0.30	1.60	2.38	4.03	25.50
25,000 to 50,000	233	0.08	1.19	2.22	3.83	48.74
FIRE LOSS PER BUILDING FIRE (1951)						
Cities Over 500,000	14	$ 202	$525	$850	$1,680	$1,959
250,000 to 500,000	20	162	408	854	1,872	2,752
100,000 to 250,000	57	137	524	699	1,112	4,228
50,000 to 100,000	112	83	401	674	1,018	5,153
25,000 to 50,000	220	35	262	520	927	8,061
NO. OF BUILDING FIRES PER 1,000 POP. (1951)						
Cities Over 500,000	17	2.1	2.8	3.7	4.8	6.7
250,000 to 500,000	20	1.6	2.4	4.2	5.3	8.2
100,000 to 250,000	60	1.1	2.8	3.9	5.6	9.0
50,000 to 100,000	115	1.1	2.8	3.9	5.3	11.3
25,000 to 50,000	224	0.9	3.0	4.4	6.4	16.0
NO. OF FIRE DEPARTMENT EMPLOYEES[1] PER 1,000 POP. (1952)						
Cities Over 500,000	18	0.92	1.24	1.37	1.57	3.06
250,000 to 500,000	23	0.84	1.19	1.32	1.79	2.13
100,000 to 250,000	62	0.99	1.33	1.52	1.86	2.89
50,000 to 100,000	121	0.24	1.14	1.37	1.76	3.74
25,000 to 50,000	240	0.03	1.05	1.31	1.70	3.54
10,000 to 25,000	591	0.04	0.67	1.00	1.30	3.46
ENTRANCE SALARY OF FIREMEN (1952)						
Cities Over 500,000	14	$3,240	$3,408	$3,500	$3,817	$3,955
250,000 to 500,000	22	2,520	2,985	3,120	3,495	3,925
100,000 to 250,000	49	2,362	2,675	3,066	3,290	3,852
50,000 to 100,000	107	2,286	2,730	3,036	3,432	4,136
25,000 to 50,000	215	1,970	2,700	3,025	3,300	4,089
10,000 to 25,000	446	1,800	2,553	2,911	3,240	4,208
MAXIMUM SALARY OF FIREMEN (1952)						
Cities Over 500,000	14	$3,800	$3,927	$4,178	$4,404	$4,500
250,000 to 500,000	22	3,000	3,557	3,800	3,970	4,295

50,000 to 100,000	108	2,568	3,171	3,395	3,846	4,700
25,000 to 50,000	213	2,160	3,028	3,323	3,695	4,644
10,000 to 25,000	439	1,800	2,760	3,168	3,600	4,524
SALARY OF FIRE CHIEF (1952)						
Cities Over 500,000	14	$8,208	$8,772	$9,666	$11,598	$15,000
250,000 to 500,000	23	5,520	6,900	7,800	8,520	10,000
100,000 to 250,000	48	3,856	5,500	6,119	7,323	9,432
50,000 to 100,000	107	4,100	5,000	5,500	6,350	8,640
25,000 to 50,000	210	2,820	4,200	4,800	5,480	8,100
10,000 to 25,000	418	2,190	3,600	4,068	4,800	7,905

[1] Excludes volunteers and call men.

worked per shift and the number of shifts worked during the week. Fire departments operate on a number of combinations of shifts with varying hours for day and night duty in order to man fire equipment at all times and secure relief for firemen on duty.

A total of 82 cities reported that they reduced the work week for firemen during 1951. This compares with 112 cities over 10,000 which reported such reductions in 1950. Fourteen cities reduced the work week from 84 to 72 hours while nine reduced the work week from 72 to 56 hours. Twenty-four cities reduced the work week to 56 hours, 19 to 72 hours, 9 to 60 hours, 5 each to 67 and 48 hours, 4 to 63 hours, 3 each to 69 and 76 and 65 hours, 2 to 70 hours, and one each to 68, 66, 64, 62, and 49 hours. Twenty-seven of the cities reporting a reduction in the firemen's work week are over 50,000 population.[1]

TABLE 2

HOURS PER WORK WEEK PLATOON SYSTEM, AND HOURS ON DAY SHIFT FOR FIREMEN IN CITIES OVER 10,000: 1951

Population Groups	Work Week		PLATOON SYSTEM				
					Two Platoon by No. Hours on Day Shift		
	Range	Median	Single Platoon	Three Platoon	10	12	24
Cities over 500,000. . .	46-72	60	0	1	6	1	9
250,000 to 500,000 . . .	48-78	67	0	0	4	1	18

---

[1] The 82 cities over 10,000 population reducing firemen's work week in 1951 are: 250,000 to 500,000: Atlanta, Georgia; Louisville, Kentucky; Oakland, California; Rochester, New York; and San Diego, California. 100,000 to 250,000: Cambridge, Massachusetts; Camden, New Jersey; Knoxville, Tennessee; Scranton, Pennsylvania; Somerville, Massachusetts; Tampa, Florida; Trenton, New Jersey; Waterbury, Connecticut; and Wilmington, Delaware. 50,000 to 100,000: Bethlehem, Pennsylvania; East St. Louis, Illinois; Lancaster, Pennsylvania; Lorain, Ohio; Madison, Wisconsin; Manchester, New Hampshire; Mount Vernon, New York; Pittsfield, Massachusetts; Portsmouth, Virginia; Rockford, Illinois; Sioux Falls, South Dakota; Woonsocket, Rhode Island; and York, Pennsylvania. 25,000 to 50,000: Alliance, Ohio; Amsterdam, New York; Belleville, New Jersey; Danville, Illinois; Dubuque, Iowa; Easton, Pennsylvania; Eau Claire, Wisconsin; Ferndale, Michigan; Fitchburg, Massachusetts; Great Falls, Montana; Haverhill, Massachusetts; Jackson, Tennessee; Massillon, Ohio; Melrose, Massachusetts; Meriden, Connecticut; Owensboro, Kentucky; Plainfield, New Jersey; Royal Oak, Michigan; Waukegan, Illinois; and West New York, New Jersey. 10,000 to 25,000: Boulder, Colorado; Bozeman, Montana; Corona, California; East Detroit, Michigan; Englewood, New Jersey; Garden City, New York; Gardner, Massachusetts; Gloversville, New York; Guthrie, Oklahoma; Harrison, New Jersey; Hollywood, Florida; Hornell, New York; Huron, South Dakota; Jennings, Missouri; Leominster, Massachusetts; Maplewood, Missouri; Marietta, Ohio; Monterey Park, California; Morristown, New Jersey; New Iberia, Louisiana; North Tonawanda, New York; Port Chester, New York; Rahway, New Jersey; Renton, Washington; St. Augustine, Florida; St. Clair Shores, Michigan; Salinas, California; San Carlos, California; Skokie, Illinois; Talladega, Alabama; Visalia, California; Wallingford, Connecticut; Watsonville, California; Willimantic, Connecticut; and Winfield, Kansas.

Platoon System. The two-platoon system continues to be the most popular shift arrangement; 959 of 1,031 cities reporting use the two-platoon system. Sixty cities use the three-platoon system (compared with 47 last year). Twelve use the single-platoon system. Table 2 shows that of the 959 cities using the two-platoon system, 764 work the 24-hour-on, 24-hour-off shift and 161 use the 10-hour day and 14-hour night shift. Twenty-six cities use the 12-hour day and eight cities use shifts of 9 and 11 hours.

Overtime Pay. For the first time the 1951 Municipal Year Book shows in both Tables XIII and XIV the policy of individual cities on payment of overtime for firemen. Over 70 per cent (761 out of 1,043 reporting) do not pay overtime; 122 cities pay straight time for overtime; 112 give time off; and 28 pay time and one-half. An additional 17 cities pay an hourly wage which is not related to the base pay. Two cities report that they pay double for actual hours on overtime, and one city adds overtime to the annual paid vacation allowance

Paid Vacation and Sick Leave. The median annual paid vacation is 15 days for all cities over 10,000 population. In all but the largest size cities, the median allowance is representative of most of the leaves given firemen. The 15-day annual vacation allowance often is figured on a calendar day basis and thus represents two weeks vacation which is comparable with the annual vacation given most city employees (see Personnel section).

Tables XIII and XIV show the number of days paid annual sick leave for all cities over 10,000 population. The amount of sick leave actually allowed ranges from five days per year to a full year with pay. The median number of days reported by all cities is 14. A total of 681 cities report that they make a policy of granting paid sick leave; 193 additional cities do not have a formal policy but usually pay firemen for such time off. Ninety-three cities do not allow sick leave with pay. Some cities reported that they pay one-half or more of the salary when a fireman is ill.

Pay for Holidays. Cities were asked to report their practice in paying firemen for work on Christmas, Labor Day, and other regular holidays. Nearly 85 per cent of the cities reporting (925 out of 1,087 cities) do not pay firemen for holiday work. Of the 162 cities which do pay firemen for holidays, 98 give extra time off and 27 add legal holidays to the vacation allowance. Thirty-four cities report that they give an extra day's pay for holiday work, while three pay time and one-half.

Regular Physical Examinations. Information was obtained from fire chiefs on the policy of cities requiring periodic physical examinations for firemen and policemen to ascertain physical fitness for duty. Over 85 per cent of the reporting cities have no plan for regular physical examinations for firemen. Of the 130 cities requiring regular physical examinations, 109 examine all men annually, four give examinations semi-annually, and eight cities provide examinations every two years. Nine other cities require physical examinations on promotion only. A number of cities report that they require physical examinations only on entrance into fire service or after extended sick leave or injury.

Work Clothes, Uniforms, or Clothing Allowances. The 1951 Year Book reported the policy of cities in furnishing work clothes (helmets, boots, and rubber coats or dress uniforms) or annual cash allowances for firemen. The information showed that 65 per cent of the reporting cities make some provision for furnishing clothes or uniforms; 345 cities furnish work clothes, 60 cities furnish dress uniforms, 174 cities provide both work clothes and dress uniforms, and 135 cities make annual cash payments to firemen for work clothes and uniforms. Annual cash payments range from $15 to a high of $200 per year with the median at $60 per year.

Fire Department Expenditures. Tables XIII and XIV show for each city over 10,000 the expenditures for salaries and wages, including payments to volunteers and paid call men, and the total expenditures for the municipal fire department. Table XIII also includes expenditures for hydrant rental. Table 3 shows 1951 expenditures for salaries and wages and total 1951 expenditures (excluding hydrant rental) on a total and per capita basis for population groups. Total per capita expenditures range from $6.11 in cities over 500,000 population to $3.63 in cities of 10,000 to 25,000 population. The per capita expenditures for salaries and wages show the same pattern with the highest amount in the cities over 500,000 and the lowest amount in cities of 10,000 to 25,000. Salary and wage expenditures represent over 90 per cent of total departmental expenditures for all cities over 10,000. While not directly comparable with last year's figures, both per capita expenditures and per capita salaries and wages show an increase for all population groups over last year, and salary and wage expenditures represent a larger percentage of total departmental expenditure.

TABLE 3

FIRE DEPARTMENT EXPENDITURES IN 1951

Population Group	No. Cities Reporting	Population of Cities Reporting (000 omitted)	Fire Department Expenditures: 1951				Per Cent Salaries and Wages to Total
			Salaries and Wages		Total		
			Amount (in thousands)	Per Capita	Amount (in thousands)	Per Capita	
Cities over 500,000. . .	13	18,356	$106,038	$5.78	$112,152	$6.11	94.5
250,000 to 500,000 . . .	22	7,834	39,790	5.08	44,293	5.65	89.8

Fire Losses. Summary data on 1951 fire loss per capita, as shown in Table 1, and individual city and summary data on fire loss per building fire and number of building fires per 1,000 population, as shown in Table 1 and Table XIII, indicate roughly the effectiveness of fire prevention activities. In addition, the loss per building fire may give some indication of the fire department's effectiveness in fighting fires.

All fire loss data were obtained from fire chiefs early in 1952 by the National Fire Protection Association and supplied to the Year Book. The

1950 census was used in reducing these figures to a per capita basis or a per-1,000-population basis.

The statistical distribution of fire loss per capita as shown in Table 1 is useful for city officials in making comparisons of any city's performance against the average for cities in various population groups. City officials in making fire loss comparisons must give due regard to other factors affecting first risks which include climatic conditions, exposure hazards, building construction, contents and type of occupancy, and other conditions which vary considerably from one city to another. Nevertheless the fire loss figures in Table 1 do indicate where any city stands in relation to other cities in its population group. Such comparisons are useful in drawing attention to the fire loss problem, in stimulating the investigation of causes of fires, and in developing a collective interest in improved fire defenses. Officials in any given city can tell readily whether or not the loss record of that city is generally high, average, or low in comparison with other cities.

The loss per building fire is obtained by dividing the total dollar amount of fire losses by the number of fires in buildings. This is believed to give a more useful index than if the total losses were divided by the total of all fires or alarms. Every fire department answers many calls other than fires including trivial calls for dump fires, automobiles, grass, rubbish and the like. On the other hand, almost all fire losses occur in buildings. Therefore, the loss per building fire as shown for individual cities in Table XIII is a figure which when taken with other information may help to appraise the general fire situation in a given city.

Fire Insurance Classification. Fire insurance rates on property in a city depend in part upon the fire insurance class of the municipality. The classification of a city is determined by rating engineers through the use of the Grading Schedule of the National Board of Fire Underwriters in making an engineering appraisal of fire protection facilities. For the cities of more than 25,000 population the classification is determined by engineers of the National Board of Fire Underwriters, while the classification for the smaller cities is determined by engineers of the state rating organizations, which are private agencies.

The classification of a city is determined by the number of points of deficiency assessed because conditions are below the standards prescribed in the Schedule. Points of deficiency are charged for each defect and the city with the highest number of deficiency points has the lowest grading. The city in which fire protection facilities are considered most able to cope with fire and in which the fire hazard is the least is the one receiving the lowest number of deficiency points. The total possible number of points of deficiency is 5,000 distributed over nine major items: water supply, fire department, fire alarm, police, building laws, hazards, structural conditions, climatic conditions and divergence in grading of water supply and fire department. A city is then placed in one of 10 classes according to the total points of deficiency charged against its fire defenses. For example, if the total number of points of deficiency falls between 0 and 500 points the city is in class 1, between 501 and 1,000 points in class 2, between 1,001 and 1,500 points in class 3, et cetera.

Tables XIII and XIV present for cities over 10,000 population the total fire insurance class, total number of points of deficiency charged against the nine factors listed above, the number of points of deficiency charged against the fire department, and the year in which the city was last graded. The distribution of cities according to the total classification and the classification of the fire department is summarized in Table 4 for all cities for which information was available. Seventy-eight per cent of the cities over 25,000 by total classification are in class 3, 4 or 5, while only 42 per cent of the cities between 10,000 and 25,000 are in class 3, 4, or 5. There is no city in class 1, chiefly because of the deficiency points resulting from failure of the cities to provide specified restrictions on building construction. Another important reason in some cities is the number of deficiency points charged under "climatic conditions."[2]

The fire department, as indicated above, is one of the nine factors considered in grading a city's fire defenses and its relative value is 1,500, or 30 per cent, of the total possible number of points of deficiency. Therefore the range in the points of deficiency that may be charged against a

---

[2] For detailed information on how insurance rates are established, an explanation of the procedure in determining a city's classification, and the relation of the classification to insurance rates, see Chapter 2 of Municipal Fire Administration (International City Managers' Association, 1950). This volume also contains a list of rating bureaus and the complete Grading Schedule of the National Board of Fire Underwriters as revised in 1942.

Table 4

Distribution of Cities Over 10,000 According to Total Fire Insurance Classification and to Classification of Fire Department

Fire Insurance Class	Total Fire Insurance Classification								Classification of Fire Department	
	All Cities Over 25,000: Number in Each Class	All Cities Over 25,000: Per Cent in Each Class	Cities over 500,000	250,000 to 500,000	100,000 to 250,000	50,000 to 100,000	25,000 to 50,000	Total Class—Cities 10,000 to 25,000[1]	Cities Over 25,000	Cities 10,000 to 25,000[1]

[1] These columns include all cities for which data are available, including cities omitted from Table XIV.

[2] Includes cities in Texas, New Jersey, and New Hampshire for which a different grading schedule is used (see footnotes to Tables XIII and XIV).

[3] Includes cities in New England states, Missouri, and Pennsylvania for which only total fire insurance class is available; also includes cities in Texas, New Jersey and New Hampshire for which a different grading schedule is used (see footnotes to Tables XIII and XIV).

fire department is 0 to 1,500. If the fire department of a city has a deficiency falling between 0 and 150, the city is in class 1 so far as the fire department is concerned, which is the highest or best rating. The fire department may be in class 1, but the total fire insurance class for a city may be 2, 3, or 4 because of greater deficiency charges against other items in the Grading Schedule. The class for any fire department can be determined from the following: class 1—0 to 150 deficiency points; class 2—151 to 300; class 3—301 to 450; class 4—451 to 600; class 5—601 to 750; class 6—751 to 900; class 7--901 to 1,050; class 8—1,051 to 1,200; class 9--1,201 to 1,350; and class 10—1,351 to 1,500 points of deficiency.

The distribution of cities over 25,000, according to class of fire department (Table 4), shows 55 per cent falling in classes 3, 4, and 5, with only the fire departments of Detroit, Los Angeles, Milwaukee, and Washington in class 1 and of 28 other cities in class 2. For cities between 10,000 and 25,000, only 22 per cent of the fire departments are in classes 3, 4, and 5, and no departments are in class 1 or 2.

Changes in the total fire insurance classification of cities and in the class of the fire department which resulted from regradings made during 1951 are discussed below.

1. Cities over 25,000. The fire defenses of 43 cities of 25,000 or more population were regraded during 1951 by the National Board of Fire Underwriters, which compares with 39 cities in 1950 and an annual average of 24 cities that were regraded by the National Board during the 20-year period from 1930 to 1950, inclusive. Sixteen of the cities regraded in 1951 had been previously graded sometime during the 10 years from 1941-1950. The average number of years since the previous grading was 10.5 years with a range of 3 to 22, as compared with 11.1 years in 1950. (Several of the 43 cities were regraded in 1950 but the data were not available until 1951.)

As the result of the new grading in 1951, 34 of the 43 cities received a reduction in the total number of points of deficiency, and in 18 of these cities the reduction was sufficiently large to place the city's fire defenses in a better class: from class 3 to class 2--San Francisco, California; from class 4 to class 3—Oakland and Berkeley, California; Miami, Florida; Greensboro, North Carolina; Columbia, South Carolina; and Lansing, Michigan; from class 5 to class 4—Miami Beach, Florida; Council Bluffs, Iowa; Fargo, North Dakota; Youngstown, Ohio; Salem, Oregon; and Beloit, Wisconsin; from class 6 to class 4—Parma, Ohio; from class 7 to class 4—Pensacola, Florida; from class 6 to class 5—Ottumwa, Iowa; from class 7 to class 5—Galveston, Texas; and from class 7 to class 6—Danville, Illinois. The reduction in the number of points of deficiency in the 16 other cities was not sufficient to put them into a better class: Tuscaloosa, Alabama; West Palm Beach, Florida; Savannah, Georgia; Alexandria, Charlottesville, and Danville, Virginia; Davenport and Burlington, Iowa; Sioux Falls, South Dakota; Oklahoma City and Muskogee, Oklahoma; Laredo, Texas; Yakima, Washington; Covington and Lexington, Kentucky; and Odessa, Texas.

Nine of the 43 cities over 25,000 that were regraded in 1951 received a greater number of points of deficiency, sufficient in three cities to put them into a poorer class: from class 3 to class 4—Jacksonville, Florida, and St. Paul, Minnesota; and from class 2 to class 4—Philadelphia, Pennsylvania. Six cities received additional points of deficiency but not enough to put them into a poorer class: Hot Springs, Arkansas; Alhambra, California; Fort Lauderdale, Florida; Rocky Mount, North Carolina; Reading, Pennsylvania; and East Orange, New Jersey.

The fire departments in 24 of the 43 cities over 25,000 that were regraded in 1951 received a sufficient reduction in points of deficiency to put the fire department into a better class: from class 3 to class 2—San Francisco, California, and Miami, Florida; from class 4 to class 2—Berkeley, California; from class 5 to class 2—Oakland, California; from class 4 to class 3—Lansing, Michigan; from class 5 to class 3—Oklahoma City, Oklahoma; Salem, Oregon; and Covington, Kentucky; from class 5 to class 4—Columbia, South Carolina; from class 6 to class 4—Fort Lauderdale, Florida; Greensboro, North Carolina; and Burlington, Iowa; from class 8 to class 4—Miami Beach and Pensacola, Florida; from class 6 to class 5—Council Bluffs, Iowa; Sioux Falls, South Dakota; and Laredo, Texas; from class 7 to class 5—Fargo, North Dakota, and Beloit, Wisconsin; from class 8 to class 5—Galveston, Texas, and Parma, Ohio; from class 7 to class 6—Tuscaloose, Alabama; from class 8 to class 6—Danville, Illinois; and from class 8 to class 7—Ottumwa, Iowa. In six other cities the points of deficiency were increased enough to put the fire department into a poorer class: from class 2 to class 5—Philadelphia, Pennsylvania; from class 3 to class 4—Jacksonville, Florida, and St. Paul, Minnesota; from class 4 to class 5—Alexandria, Virginia; and from class 5 to class 6—Hot Springs, Arkansas and Reading, Pennsylvania. The changes in points of deficiency for the fire departments of the remaining 13 cities were not sufficient to change the classification of the department.

2. Cities of 10,000 to 25,000. Seventy cities with populations of 10,000 to 25,000 were regraded in 1951, which compares with 67 in 1950. Since data for previous gradings were not available for four cities this discussion is limited to 66 cities. The regrading was done by the rating organizations (not the National Board of Fire Underwriters) operating in the several states.

Forty-seven of the 66 cities received a reduction in the total number of points of deficiency, but in only 28 cities was this reduction sufficient to put the city into a better class: from class 4 to class 3—Burlingame, California; from class 5 to class 4—Chico, California; from class 6 to class 4—Westchester, Pennsylvania and University Heights, Ohio; from class 6 to class 5—Twin Falls, Idaho; Elmwood Park, Illinois; Dodge City, Kansas; Greenwood, Massachusetts; and Watertown, Wisconsin; from class 7 to class 5—Oxnard, California; from class 7 to class 6—Decatur, Alabama; Calumet City and Mattoon, Illinois; Bedford, Indiana; Sault St. Marie, Michigan; and Bucyrus, Ohio; from class 8 to class 6—Corona, California, and Bismarck, North Dakota; from class 8 to class 7—Seminole, Oklahoma, and Hobbs, New Mexico. This list of cities going into a better class does not include one New Jersey city and seven Texas cities where different grading schedules are used. These cities are: Lodi, New Jersey; and Bellaire, Bryon, Cleburne, Grand Prairie, Mercedes, Orange, and San Benito, Texas.

The remaining 19 cities received a reduction in deficiency points but not sufficient to put them into a better class: Brawley, Eureka, and Santa Paula, California; Greeley, Colorado; Laramie, Wyoming; Opelika and Phenix City, Alabama; Hialeah, Florida; Dublin and La Grange, Georgia; Hickory, Sanford, and Shelby, North Carolina; Hopewell, Virginia; Park Ridge, Illinois; Marshalltown, Iowa; Monroe, Michigan; Athens, Ohio; and Wisconsin Rapids, Wisconsin.

Nineteen cities between 10,000 and 25,000 received an increase in the total number of points of deficiency as a result of the new grading in 1951, and in six the increase was sufficient to put the city into a poorer class: from class 3 to class 4—Walla Walla, Washington; from class 5 to class 6—Greenville, North Carolina, and Chicago Heights, Illinois; from class 6 to class 7—Camden, Arkansas; and from class 7 to class 8—Clovis, New Mexico, and Sheridan, Wyoming. The 13 cities that received an increase in total points of deficiency but not enough to put their fire defenses in a poorer class were Anaheim, California; Sheffield, Alabama; Bradenton, Florida; Thomasville, Georgia; Reedsville, North Carolina; La Grange and Melrose Park, Illinois; Manhattan, Kansas; Grosse Pointe Woods, Michigan; Mankato and Winona, Minnesota; Murfreesboro, Tennessee; and Kennewick, Washington.

Thirty-five of the 66 cities regraded in 1951 had been graded previously during the 10 years 1941 to 1950, and the average number of years since the previous grading was 9.1 years, as compared with 9.2 years for the cities regraded in 1950 and 8.5 years in 1949.

Of the 58 cities of 10,000 to 25,000 population for which comparative data are available, the number of points of deficiency for the fire department was decreased in 39 cities, and this was sufficient in 28 of these cities to put the department into a better class: Camden, Arkansas; Brawley, Burlingame, Chico, Oxnard, and Santa Paula, California; Hobbs, New Mexico; Decatur and Phenix City, Alabama; Dublin and La Grange, Georgia; Sanford and Shelby, North Carolina; Hopewell, Virginia; Westchester, Pennsylvania; Twin Falls, Idaho; Calumet City and Mattoon, Illinois; Bedford, Indiana; Marshalltown, Iowa; Dodge City, Kansas; Sault St. Marie, Michigan; Mankato, Minnesota; Bismarck, North Dakota; Greenwood, Mississippi; Bucyrus and University Heights, Ohio; and Watertown, Wisconsin.

In 19 of the 58 cities the fire department received a greater number of points of deficiency, sufficient in 11 cities to put the department into a poorer class: Clovis, New Mexico; Sheridan, Wyoming; Bradenton, Florida; Greenville, North Carolina; Chicago Heights, La Grange, and Melrose Park, Illinois; Grosse Point Woods, Michigan; Murfreesboro, Tennessee; and Kennewick and Walla Walla, Washington.

TABLE XIII

FIRE DEPARTMENT DATA FOR CITIES OVER 25,000: 1952

This table includes the 509 municipalities over 25,000. All these data were reported to the Year Book late in 1951 and early in 1952 by city officials, except the data on fire loss which were obtained from city officials in March, 1952, by the National Fire Protection Association, and the insurance grading data which were supplied by the several rating agencies or by state officials in February, 1952. Under "Number of Employees," the figure is the number of full-time paid firemen, officers, and civilian employees. Under "Fire Chief—How Appointed," "A" indicates by city manager, "B" by fire or safety board, "C" by council, "M" by mayor, "S" by fire or safety commissioner. Under "Work Hours Per Week" are shown the average hours in the regular work week for full-time firemen; under "Hours on Day Shift," "SP" indicates single platoon; "3P" indicates three-platoon system; all others have two-platoon system using either 24-hours-on-24-hours-off plan or some other plan shown by hours on the day shift. Under "Overtime pay," an "N" indicates no overtime pay, "S" pay at straight time, "H" pay at time and one half, and "T" equal time off. "No. Days Vacation; Sick Leave" shows the annual allowance for vacation (before the dash) and sick leave (after the dash); "N" in the sick leave column means the city has no formal policy governing sick leave. "Fire Department Expenditures" are for calendar year 1951 or last fiscal year, whichever was reported. "Salaries and Wages" is followed by "v" when the figure reported includes payments made to volunteers and part-time firemen. "Total Expenditures" include equipment and all other payments except payments into retirement fund or those made directly by city to retired employees. Under "Total Fire Insurance Class" the four figures in order are the total or final fire insurance class, the total points of deficiency for the city, the number of points of deficiency for the fire department only, and the year last grading was made. See Table IV for population figures. A single dagger (†) indicates 1950 figures; superscript numerals (2) refer to notes at end of table; leaders (. . .) indicate data not reported.

City	Number of Full-time Paid Employees	Salary of Full-time Firemen—Entrance, Maximum	Fire Chief —Salary, How Appointed	Work Hours Per Week, Hours on Day Shift	Over-time Pay	No. Days Vacation, Sick Leave	Fire Dept. ---

[1] Odessa and San Angelo, Texas, are graded by the engineers of the state Board of Insurance Commissioners. The figure given is the key rate, represents the city's classification. The basis rate is a measure of the city's ability to cope with the fire problem.

[2] For a few cities over 25,000, the Schedule Rating Office of New Jersey uses letters instead of figures and provides for only nine classes. The letter "A" indicates that the city has less than 1,000 points of deficiency under the National Board Grading Schedule, a Class "B" town 1,001 to 1,500 points of deficiency, and 500 additional points (up to a total of 5,000) for each class. A Class B city in New Jersey would therefore be the same as a Class 3 city elsewhere. The letter "S" after the class indicates that the municipality or a part thereof has a seasonal population and/or serious frame structural conditions.

[3] The New England Fire Insurance Rating Association supplied only the total or final classification for most cities as determined by the National Board of Fire Underwriters and also the minimum rate dwelling grade indicated by a capital letter following the National Board class. There are six grades of protection with respect to minimum rates on dwelling-house property, "A" being the best and "F" the poorest. The rating bureau in Missouri supplied only the total or final class for Columbia, Independence, and University City; these cities are not graded under the deficiency point system used by the National Board of Fire Underwriters.

[4] Overtime paid at fixed hourly rate not related to base pay.

[5] Pay double time for overtime.

TABLE XIV

FIRE DEPARTMENT DATA FOR CITIES OF 10,000 TO 25,000; 1952

This table includes 750 of the 837 cities between 10,000 and 25,000 population. All data were reported to the Year Book late in 1951 and early in 1952 by city officials, except the insurance grading data which were supplied by the several rating agencies or by state officials in February, 1952. Under "Employees" the first figure is the number of full-time paid employees including civilians, but not including part-time employees or "sleepers"; the second is the number of volunteer firemen. Total fire department expenditures include equipment and all other payments, except hydrant rental and payments into retirement fund or those made directly by city to retired employees. See headnote to Table XIII for explanation of all other column heads. See Table IV for population figures. A single dagger (†) indicates 1950 figures; superscript numerals (^{2}) refer to notes at end of table; leaders (. . .) indicate data not reported.

[1]The fire defenses of Texas cities are graded by the engineers of the Board of Insurance Commissioners of the state of Texas. The figure given is the key rate which, in addition to being a city's basis rate, represents the city's classification. The basis rate is a measure of the city's ability to cope with the fire problem. The method of grading the factors considered is published for each city, and municipal officials in that state thus know how the basis rate is determined. National Board data are available for most Texas cities over 25,000 because these figures are compiled by the Board for the use of company members doing business in Texas.

[2]In classifying the fire defenses of cities under 25,000 the Schedule Rating Office of New Jersey uses letters instead of figures and provides for only nine classes. The letter "A" indicates that the city has less than 1,000 points of deficiency under the National Board Grading Schedule, a Class "B" town 1,001 to 1,500 points of deficiency, and 500 additional points (up to a total of 5,000) for each class. A class B city in New Jersey would therefore be the same as a Class 3 city elsewhere. The letter "S" after the class indicates that the municipality or a part thereof has a seasonal population and/or serious frame structural conditions.

[3]The New England Fire Insurance Rating Association supplied only the total or final classification for most cities as determined by the National Board of Fire Underwriters and also the minimum rate dwelling grade indicated by a capital letter following the National Board class. There are six grades of protection with respect to minimum rates on dwelling-house property, "A" being the best and "F" the poorest. The rating organizations in Pennsylvania and Missouri supplied only the total or final class for most cities.

[4]The rating organization in New Hampshire uses letters in designating the classification for some cities. Standards for the A1 class require an adequate water supply, a standard fire and police department, an approved fire alarm system, and building codes and other regulatory ordinances.

[5]Overtime paid at fixed hourly rate not related to base pay.

[6]One day added to vacation for four hours overtime.

Police Administration

Developments in 1951

By O. W. Wilson

Dean, School of Criminology, University of California, Berkeley

THE year 1951 saw a resurgence of interest in two broad fields of police activity which, while never completely abandoned since the 1930's, have nevertheless been the objects of varying degrees of attention over the years. The fight against organized crime and the need for civil defense planning have again come to the fore, and the new approach seems to be one of attempting to meet these major issues with a program worked out on a large and nationally coordinated basis.

Organized Crime. Many cities have organized their own crime commissions and most seem to follow the pattern set up by the Special Senate Committee to Investigate Organized Crime—the Kefauver Committee. Several were privately organized and financed by citizens who had the zeal and interest to initiate investigations in local communities once the need had been brought to their attention through the dramatic presentation of the Kefauver Committee findings.

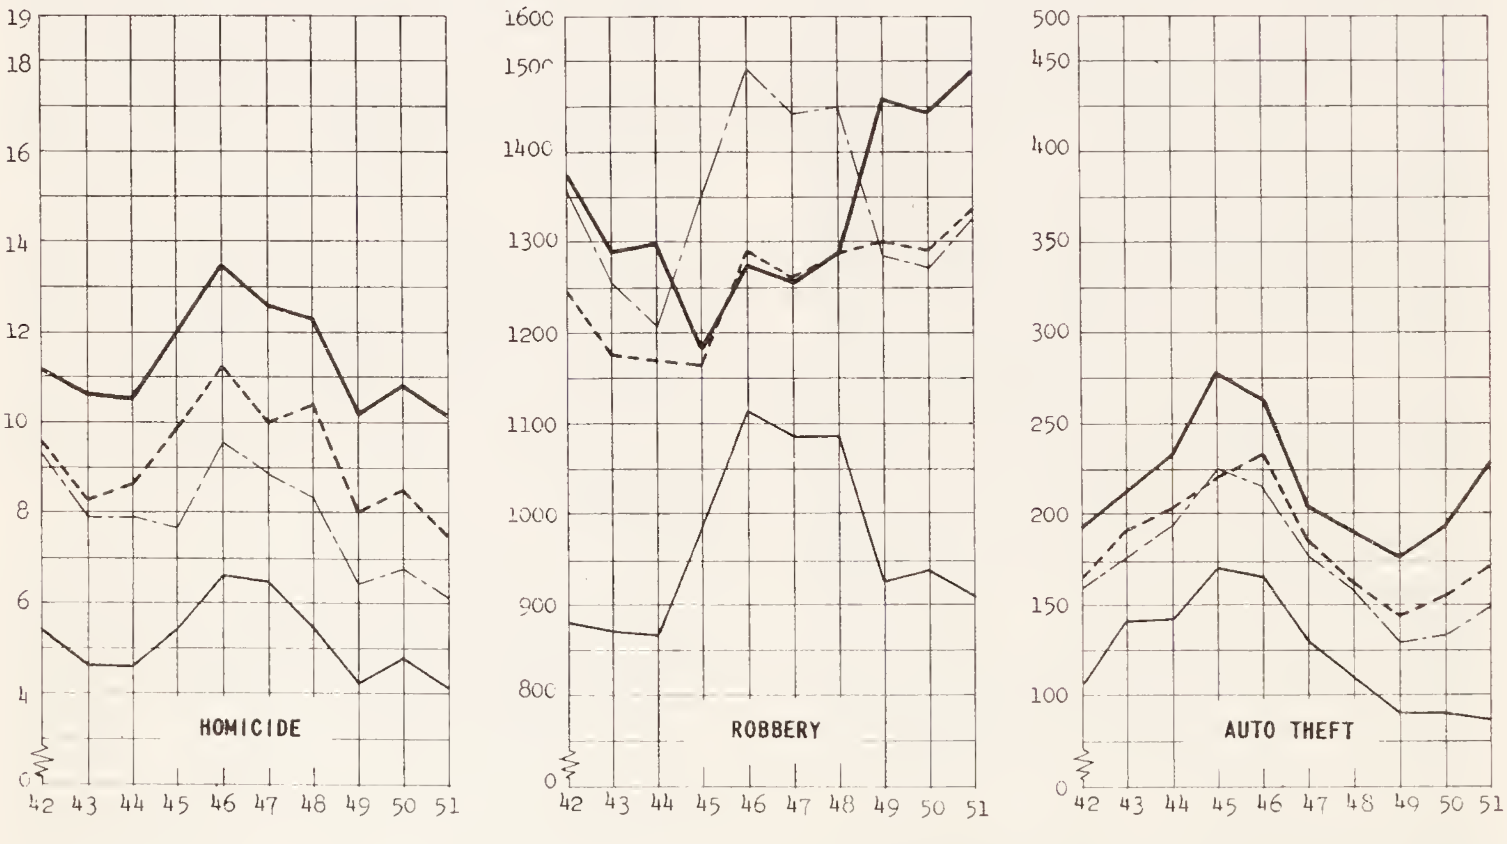
Among these local crime commissions are those in New York City, Tampa, Miami, Chicago, St. Louis, Dallas, and Pueblo (Colorado). In five states, Alabama, Arkansas, California, Missouri, and Texas, commissions were set up by the legislatures. The governors of Colorado, Maine, and New York appointed their investigating committees, and five New England states have created a joint crime commission.

The activities of crime commissions have pointed up the need for improved law-enforcement standards, but it is too early to predict whether this renewed awareness will be reflected in constructive citizen interest in promoting reorganization and training programs for police departments. Also, it is difficult to determine whether the popularly expressed fear and alarm occasioned by the disclosure of the extent of the narcotics traffic and of gambling is more than a passing interest or will lead to definite long-term programs designed to coordinate national, state, and local efforts to control these adjuncts to modern organized crime.

Civil Defense. In the planning for civil defense more positive results are evident. An international agreement on coordination of civil defense was concluded with Canada, providing that the federal authorities in each country will keep the other informed regarding: (a) organization, legislation, and regulations; (b) material, equipment, supplies, and facilities; (c) arrangements with state, provincial, and municipal authorities and agencies; (d) training facilities and methods; and (e) public information and education. It also provides for the exchange of training facilities and personnel.

The aid and advice of police administrators in this country were requested by the Federal Civil Defense Administration, and a committee was appointed by the International Association of Chiefs of Police to serve the director of the Police Services Division of FCDA. This police advisory committee assisted in the preparation of "Police Services," a handbook and guide for police administrators and civil-defense planners. Plans for other publications for police use are under way. Northwestern University and the representatives of the IACP entered into a contract with the FCDA in May, 1951, to develop courses of instruction, training manuals, and visual aids intended for local and state officials charged with highway traffic regulations and controls.

Training schools and classes for civil-defense leadership are coming to be regarded as of first importance, and most police departments recognized the need by setting up new, or reviving the old, civil-defense bureaus and including in their training programs civil-defense and disaster-preparedness courses. The first regional training school under the auspices of the Federal Civil Defense Administration opened July 30 at Oklahoma Agricultural and Mechanical College at Stillwater. It presented a series of two-week courses to trainees from 20 midwestern and midsouthern states,



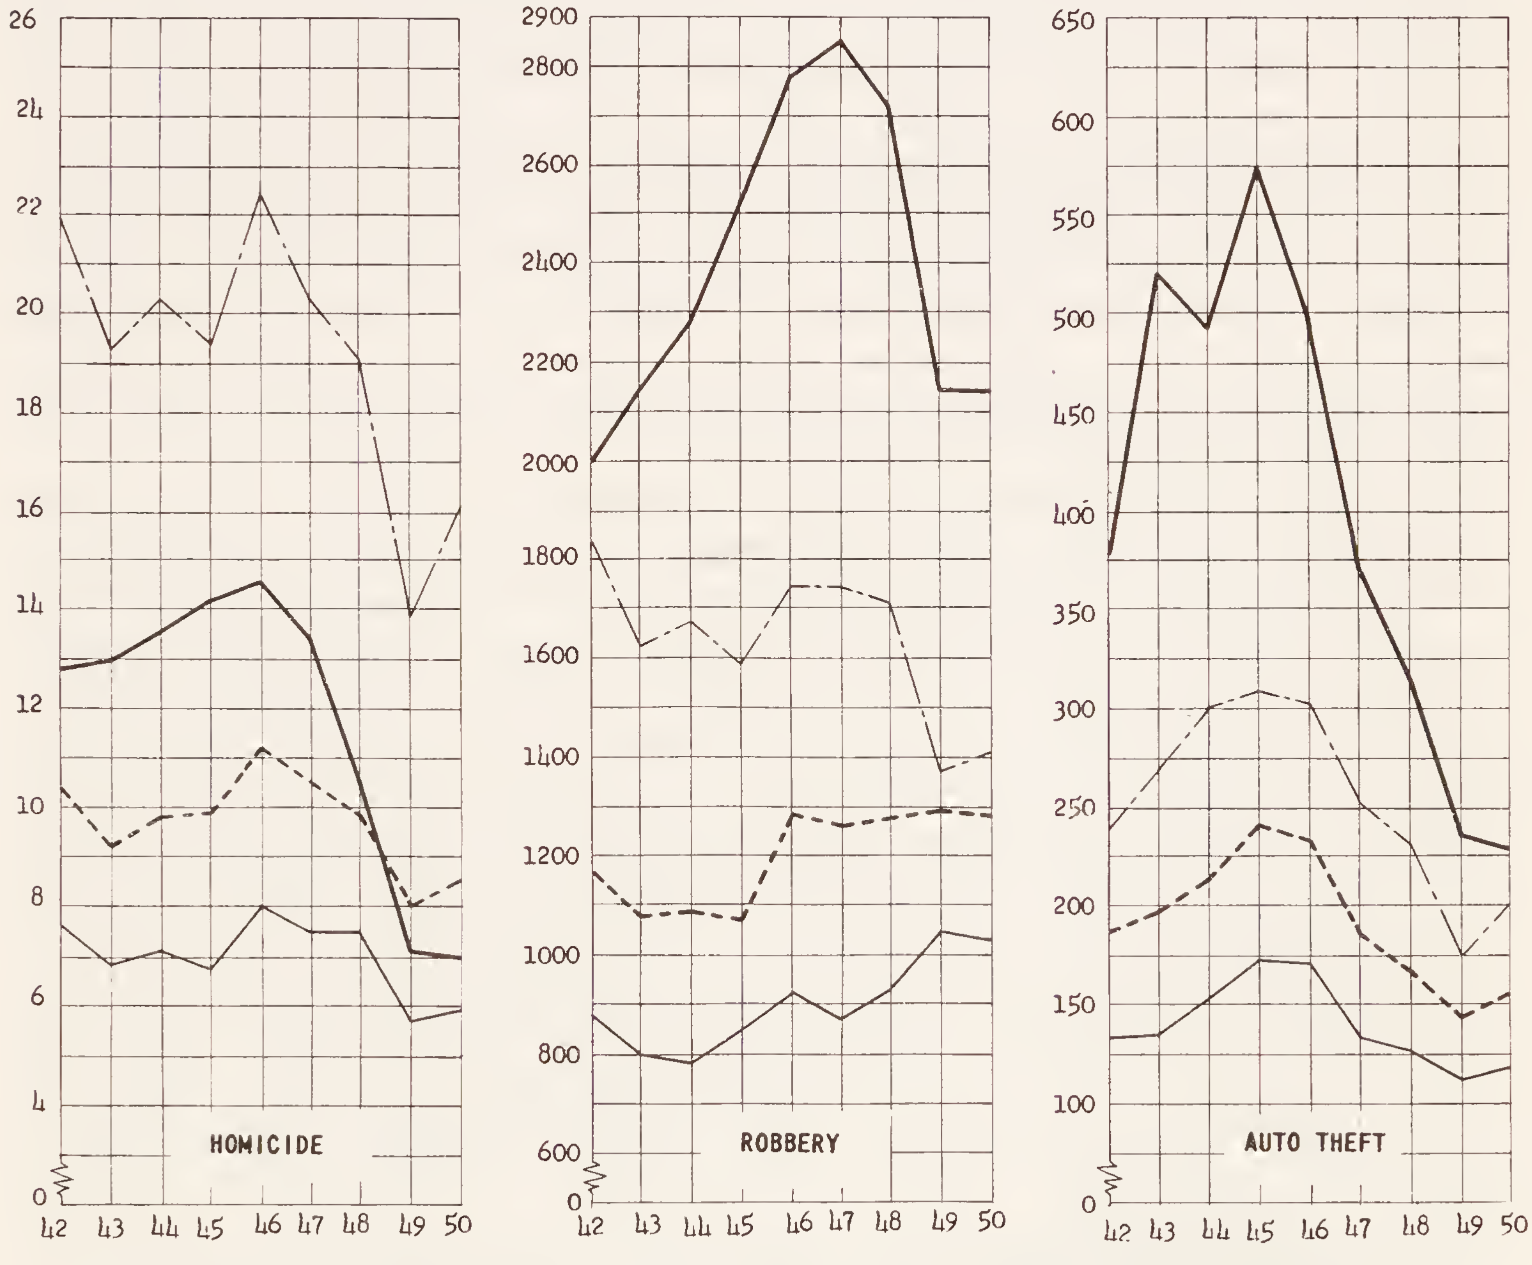
Source: Federal Bureau of Investigation, Uniform Crime Reports

Urban Crime Rates per 100,000 Population in the United States by Population Groups: 1942-1951

Crimes shown in charts on this and the facing page are defined by the FBI as follows: Homicide includes both murders and nonnegligent manslaughters; it does not include attempts to kill, suicide, accidental deaths, or justifiable homicides. Robbery includes robbery, burglary, breaking or entering, and larceny-theft; it does not include auto theft, embezzlement, "con" games, forgery, and passing worthless checks. Auto Theft includes all cases where a motor vehicle is stolen or driven away and abandoned, including joy-riding thefts. For more detailed definitions see Uniform Crime Reports issued by the FBI.

with instruction covering atomic, chemical, and biological warfare and methods of defense against these. A western training center of the FCDA was located at St. Mary's College near San Francisco for candidates from the 11 western states, and plans for a third such school at Ogontz, Pennsylvania, were completed. All courses were open to police officers and administrators, as well as to trainees selected by state civil defense directors.

In spite of national planning there remained some confusion in the field of civil defense as to the responsibility for financial support of local programs. The League of California Cities put itself on record as believing that if the national program collapsed it would be due to the apathy and indifference of Congress in regard to appropriations for staffing, equipping, and training defense units. On the other hand, the National Civil Defense Advisory Council, though it recognized the need for Congressional sup-



Source: Federal Bureau of Investigation, Uniform Crime Reports

URBAN CRIME RATES PER 100,000 POPULATION IN THE UNITED STATES BY GEOGRAPHIC AREAS: 1942-1950

All 48 states are grouped in three regions: North includes New England, Middle Atlantic, East North Central and West North Central states; South includes South Atlantic, East South Central, and West South Central states; and West includes Mountain and Pacific states. For further explanation see FBI Uniform Crime Reports. See facing page for definitions of crimes shown in charts.

port, felt that a more important issue was that of convincing the public of the genuine need for its assistance and cooperation, and that only then would there be a strong motivation for sacrificing time and effort. This re-education, it was felt, must come from Congress and the Department of Defense through clear statements of facts regarding the seriousness of the need.

Crime Rates. According to figures published in Uniform Crime Reports, there was an increase in Part I crimes of 5.1 per cent in cities, and 4.0 per cent in rural communities during the first six months of 1951. However, in both rural and urban communities four major crimes (murder, robbery, aggravated assaults, and burglaries), showed a decrease as compared to the same period in 1950. A decrease of 6.1 per cent in murders in cities, however, was balanced by a 6.0 per cent increase in rapes. In rural localities manslaughter by negligence increased by 21.3 per cent and robberies decreased by 21.8 per cent. In both areas auto theft and larcenies increased markedly, the former by 18.6 per cent in cities and 20.0 per cent in rural areas, and the latter by 7.9 and 12.9 per cent.

During the first six months of 1951, the FBI received 419,451 fingerprint cards recording arrests for violations of state laws and municipal ordinances. The total arrests increased 4.2 per cent, female arrests increased 10.8 per cent, and male arrests 3.6 per cent over the same period of 1950. Previous fingerprint records were on file in 46.0 per cent of the females and 62.1 per cent of the males. Approximately one-half of those arrested for crimes against property during the first half of the year were under 25 years of age.

Training. Police training, both departmental and academic, continued to show an increase, and continuing sponsorship and interest on the part of colleges and universities was evidenced. In East Lansing, Michigan, an in-service program of 192 hours in four weeks was offered by the Michigan State College, sponsored by the training committee of the Michigan Association of Chiefs of Police. The department of police administration at Michigan State College also conducted a command officers training school. Classes in police science and administration were included in the program of the Southern Police Institute, University of Louisville, which opened on January 3, 1951, under a grant from the Rockefeller Foundation and the Carnegie Corporation of New York. Louisiana State University announced the opening of a four-year course in police training, made possible by the active interest of police administrators throughout the state. Amarillo, Texas, made an arrangement with its Junior College to enroll police trainees in a 14-week course, with trainees meeting regular college-entrance requirements.

Numerous institutes offering brief, intensive training in specialized subjects were held. The five-day court conferences given at the University of California at Berkeley and the University of Southern California in Los Angeles, Emory University in Georgia, and the Northwestern University Law School are examples. A five-day course on chemical tests for intoxication was offered at Northwestern and the University of California at Berkeley.

The Virginia State Police completed a training school near Richmond, at a cost of $200,000, to be used for in-service training of their own recruits and by members of other law enforcement agencies on a cost basis. Numerous police forces report in-service programs and continuation training for older members. Miami, Florida, took overt cognizance of its "good neighbor" obligations by requiring its policemen in training to study the Spanish language.

Procedures. Police departments in cities over 10,000 population seem to be increasingly aware of the value of adequate records and efficient communications. Most of these cities reported improvements made or planned for the near future in these services. Among twelve cities reporting new centralized records systems were Baltimore, Minneapolis, Pittsburgh, Des Moines, and Durham (North Carolina). Sixteen cities revised their existing records systems and several plan still further modification. Microfilming of records is now a standard procedure in scores of departments, as is the use of telephone-dictating equipment. Many departments have placed in use a specially built cash register which provides on the receipt a record of all traffic-fine transactions and essential information for traffic offenders.

Several cities, including Pittsburgh, San Antonio, and Des Moines, reported reorganization surveys conducted by competent authorities in the field of police administration, and several others completed the task of putting into effect the recommendations resulting from surveys made the previous year.

Patrol methods in several cities have been modified, and the increased use of one-man patrol cars is reported by Denver, San Francisco, Des Moines, Iowa City (Iowa), Durham (North Carolina), Pontiac (Michigan), Napa (California), and several others. Berkeley, California; Hartford, Connecticut; and San Antonio, Texas (all cities above 100,000 population), report continuing success in the exclusive use of one-man patrol cars.

The integration of police and fire services is receiving more and more attention and serious study. One city, Sunnyvale, California, was able to report the successful operation, over a period of a year and a half, of its integrated services. The merging of these two services has resulted in a saving to this city of 11,000 population of more than $20,000 annually on its operating budget, and a saving of $30,000 a year in reduced fire insurance premiums. An excellent review and clarification of the issues involved in creating an integrated public safety department appears in the May, 1951, issue of Public Management.

Professional Organization. The International Association of Chiefs of Police held its 58th annual conference in October at Miami, Florida, and reported a number of resolutions including one urging Congress to view civil defense needs more realistically and to appropriate sufficient funds for police equipment and indemnification of civil defense personnel against injuries received either in actual wartime disaster or in training. It urged federal, state, and local governments to strengthen the enforcement of narcotic laws and to provide constitutional means of introducing narcotics evidence otherwise inadmissible. It urged Congress to eliminate interstate transmission of race-track information and to prohibit the interstate shipment of obscene and pornographic material.

Police Department Statistics

DETAILED data on police administration in 1951 are presented in Table XV for cities over 10,000 population. This table reports the number of police employees, salaries of patrolmen and police chiefs, the work week, overtime pay, vacation and sick leave policy, patrol cars and motorcycles, and annual departmental expenditures.

For comparison of police and fire data, see the fire department section elsewhere in this book. This article summarizes and analyzes the detailed statistics in Table XV to enable city officials to make comparisons as to cost, performance, and accomplishments of municipal police departments.

Comparisons of individual cities with these averages must be made with caution. Reserve officers may or may not be used to replace absentees; some departments use two shifts; some cities use special school crossing guards, others use regular police for this purpose; police departments may or may not operate their own alarm and radio systems; some departments use uniformed personnel for routine office work; or a heavy volume of traffic in a city may require a larger-than-average proportion of the force on traffic duty.

Number of Police Employees. Table XV shows for cities over 10,000 population the total number of full-time paid police employees, and Table 1 summarizes this information. This includes both uniformed and civilian employees. The median number of policemen for 1,000 population is 1.29 for all cities over 10,000 and ranges from 1.20 in cities of 10,000 to 25,000 to 2.23 policemen in cities over 500,000 population. These data show little change from last year.

Method of Appointment of Police Chief. Table XV shows the authority making the original appointment of the police chief for cities over 25,000 population. The chief is appointed by the city manager in 127 cities, by the mayor in 126 cities, by the city council in 81 cities, by the police or safety board in 70 cities, and by a safety or service director in 38 cities. In two cities the police chief is appointed by the governor, and in five cities the police chief is elected directly by the people.

Police Salaries. Table XV shows the data on entrance and maximum salaries of police patrolmen and salaries of police chiefs, as reported by city officials late in 1951 and early in 1952. These data are summarized in Table 1. The entrance salary shown is the total amount paid a patrolman during his first year on the force, although the monthly rate may vary during the probationary period. Median entrance and maximum salaries of patrolmen are from $200 to $300 higher than those reported in the 1951 Year Book. Entrance salaries of patrolmen range from $2,880 for cities between 10,000 and 25,000 to a median of $3,500 for cities over one-half million. Maximum salaries of patrolmen at the median range from $3,125 in cities between 10,000 and 25,000 population to $4,080 for cities over 500,000.

Similarly, police chief's salaries at the median are higher this year in all population groups. Although data reported this year are not directly comparable with those reported last year, it is significant that general salary increases for policemen and for police chiefs prevail.

Hours of Work. Data for individual cities on hours of work are reported in Table XV. The median is 48 hours per week for all population groups except cities over 500,000 where the median is 44 hours. Policemen now work a 40 hour week in 218 cities over 10,000 population.

TABLE 1

POLICE EMPLOYEES AND POLICE SALARIES IN CITIES OVER 10,000 BY POPULATION GROUPS: 1952

Population Group	No. of Cities Reporting	Lowest	Lower Quartile	Median	Upper Quartile	Highest
NO. OF POLICE EMPLOYEES PER 1,000 POP. (1951)						
Over 500,000	17	1.19	1.88	2.23	2.57	3.75

10,000 to 25,000	530	2,190	3,720	4,200	4,925	9,000

A total of 123 cities over 10,000 reduced the work week for policemen in 1951 compared with 135 reporting such reductions in 1950. The greater number of reductions was from 48 to 40 hours per week. Seventy-four cities reduced their work week to 40 hours, 16 to 44, 15 to 48, six to 42, three to 45, three to 60, two to 52, and one each to 56, 47, 51, and 66 hours. Twenty-four of the cities reducing the work week are over 50,000 population.[1]

Overtime Pay. Cities were asked to report on their overtime pay policy for policemen. Of the 1,220 cities reporting, over one-half (612) reported that they have no plan for paying overtime. Allowing equal time off for overtime was reported by 293 cities, straight time pay by 258 cities, and time and one-half pay by 30 cities. Twenty-one cities pay hourly rates not related to base pay. Other methods of compensating for overtime include: double time off, three cities; double time off or straight time pay, one city; double time pay, one city; and additional retirement credit, one city.

Paid Vacation and Sick Leave. The median number of days annual paid vacation for policemen in all cities under 100,000 is 14 days. Cities over 100,000 allow 15 days. Annual vacation allowance often is figured on a calendar day basis and thus represents two weeks vacation which is comparable with the annual vacation given most municipal employees (see personnel section). A total of 774 cities over 10,000 population allow sick leave ranging from 5 to 365 days annually. The median ranges from 12 days in smaller cities to 15 days in cities over 100,000. An additional 190 cities have no definite policy on sick leave but usually pay employees for actual time off. Ninety-six cities report that they do not pay employees for such time off. This allowance is comparable with that for other city employees (see Personnel section).

---

[1] The 123 cities over 10,000 population reducing policemen's work week in 1951 are: over 500,000: Boston, Massachusetts; Cincinnati, Ohio; and Pittsburgh, Pennsylvania. 250,000 to 500,000: San Diego, California; and Seattle, Washington. 100,000 to 250,000: Bridgeport, Connecticut; Camden, New Jersey; Fall River, Massachusetts; Hartford, Connecticut; Springfield, Massachusetts; Tampa, Florida; and Wilmington, Delaware. 50,000 to 100,000: Chester, Pennsylvania; Joliet, Illinois; Lima, Ohio; New Britain, Connecticut; Passaic, New Jersey; Pittsfield, Massachusetts; Pontiac, Michigan; Pueblo, Colorado; Sioux Falls, South Dakota; Stamford, Connecticut; Troy, New York; and Union City, Pennsylvania. 25,000 to 50,000: Ann Arbor, Michigan; Belleville, New Jersey; Belmont, Massachusetts; Beverly Hills, California; Bristol, Connecticut; Chelsea, Massachusetts; Concord, New Hampshire; East Providence, Rhode Island; Fairfield, Connecticut; Ferndale, Michigan; Fitchburg, Massachusetts; Framingham, Massachusetts; Hamden, Connecticut; Hot Springs, Arkansas; Ithaca, New York; Johnson City, Tennessee; Manchester, Connecticut; Massillon, Ohio; Melrose, Massachusetts; Meriden, Connecticut; Milford, Connecticut; Mishawaka, Indiana; Montclair, New Jersey; Nashua, New Hampshire; Newport, Kentucky; Orange, New Jersey; Panama City, Florida; Perth Amboy; New Jersey; Pomona, California; Royal Oak, Michigan; San Mateo, California; Santa Barbara, California; Santa Fe, New Mexico; Teaneck, New Jersey, Warren, Ohio; and Weymouth, Massachusetts. 10,000 to 25,000: Adrian, Michigan; Andover, Massachusetts; Annapolis, Maryland; Asbury Park, New Jersey; Attleboro, Massachusetts; Batavia, New York; Bell, California; Bexley, Ohio; Borger, Texas; Boulder, Colorado; Bradford, Pennsylvania; Braintree, Massachusetts; Bristol, Pennsylvania; Carbondale, Pennsylvania; Carteret, New Jersey; Cohoes, New York; Corning, New York; Crowley, Louisiana; Danbury, Connecticut; Dover, New Jersey; Dunkirk, New York; Duquesne, Pennsylvania; East Detroit, Michigan; East Liverpool, Ohio; Escanaba, Michigan; Fayetteville, Arkansas; Hibbing, Minnesota; Hillsdale, New Jersey; Jonesboro, Arkansas; Kingsville, Texas; Leominster, Massachusetts; Martins Ferry, Ohio; Martinsburg, West Virginia; Maywood, California; Menlo Park, California; Middleborough, Massachusetts; Montebello, California; Mount Clemens, Michigan; Norwich, Connecticut; Neptune, New Jersey; Owatonna, Minnesota; Painesville, Ohio; Plymouth, Massachusetts; Redlands, California; Roselle, New Jersey; Roseville, Michigan; St. Clair Shores, Michigan; San Benito, Texas; San Bruno, California; San Marino, California; Sanford, North Carolina; Somerville, New Jersey; South Pasadena, California; Stevens Point, Wisconsin; Visalia, California; Wallingford, Connecticut; Waukesha, Wisconsin; Wellesley, Massachusetts, West Frankfort, Illinois; West Monroe, Louisiana; West Springfield, Massachusetts; Westport, Connecticut; and Whittier, California.

Extra Pay for Holidays. Nearly three-fourths of the cities (894 out of 1,197 reporting) do not make any allowance for policemen who work on holidays. Among the cities that do compensate for holiday work, 189 cities give equal time off; 78 cities give an extra day's pay; three cities pay time and one-half; one city gives double time off; and four cities pay hourly rates not related to base pay. Twenty-eight cities give policemen additional vacation time to compensate for holidays

TABLE 2

POLICE DEPARTMENT EXPENDITURES IN 1951

Population Group	Number of Cities Re-porting	Population of Cities Reporting (000 omitted)	Police Department Expenditures: 1951				
			Salaries and Wages		Total		Per Cent Salaries and Wages to Total
			Amount (in thousands)	Per Capita	Amount (in thousands)	Per Capita	
Cities over 500,000. . .	15	21,343	$199,816	$9.36	$212,277	$9.95	94.1
250,000 to 500,000 . . .	23	8,242	45,409	5.50	51,909	6.30	87.5
100,000 to 250,000 . . .	55	8,084	40,650	5.03	46,970	5.80	86.5
50,000 to 100,000	110	7,782	39,941	5.13	46,000	5.91	86.8
25,000 to 50,000	212	7,380	33,428	4.53	39,518	5.35	84.6
10,000 to 25,000	473	7,311	28,898	3.95	35,728	4.89	80.9
All cities over 10,000 .	888	60,142	$388,142	$6.45	$432,402	$7.19	89.8

Regular Physical Examinations. Periodic physical examinations for police employees are given in 128 of the 1,026 cities reporting. Of these, 98 give examinations annually, 5 semi-annually, and 13 give examinations every two years. Four other cities give examinations every three years or longer, and eight cities give examinations on promotion only. Many of the cities reporting that they do not have regular health examinations report that they give examinations for entrance into the police service or after extended sick leave or injury.

Police Department Expenditures. Table XV includes 1951 information on police salaries and wages and total police department expenditures for individual cities. Included in the figures are expenditures for new equipment but specifically excluded are pension payments to retirement funds and to former employees. These data are summarized in Table 2.

Police department expenditures were $7.19 per capita in 888 cities over 10,000 population. Expenditures per capita were generally higher in larger cities, ranging from $4.89 in cities under 25,000 to $9.95 per capita in cities over 500,000. Salaries and wages comprise about 90 per cent of total police expenditures for all cities over 10,000. The ratio varys from 81 per cent in cities under 25,000 to 94 per cent in cities over 500,000.

Number of Motor Vehicles. Late in 1951 a total of 1,064 cities over 10,000 reported 8,507 police patrol cars and 6,250 two- and three-wheel motorcycles. Table 3 summarizes the number of patrol cars, and motorcycles in terms of 100,000 population and 100 police employees. The number of patrol cars per 100,000 population does not vary greatly in cities over 10,000, but shows a gradual increase as the population of the city decreases. Cities between 10,000 and 25,000 have three times as many patrol cars per 100 employees as cities over 500,000. Cities under 500,000 population have consistently more motorcycles per 100,000 population and per 100 employees than do cities over 500,000.

TABLE 3

NUMBER OF POLICE MOTOR VEHICLES IN CITIES OVER 10,000: 1952

Population Group	Patrol Cars				Motorcycles			
	Number of Cities Reporting	Total Number	Total Number		Number of Cities Reporting	Total Number	Total Number	
			Per 100,000 Pop.	Per 100 Employees			Per 100,000 Pop.	Per 100 Employees
Cities over 500,000. . .	14	2,093	11.2	4.8	14	1,789	9.6	4.1
250,000 to 500,000 . . .	22	931	13.3	7.6	22	839	11.3	6.9
100,000 to 250,000 . . .	60	1,303	14.2	8.9	60	923	10.0	6.3
50,000 to 100,000	111	1,122	13.7	9.0	111	938	11.3	7.6
25,000 to 50,000	234	1,213	14.9	10.5	234	867	10.8	7.5
10,000 to 25,000	623	1,845	17.6	13.8	623	894	8.8	6.7
All cities over 10,000 .	1,064	8,507	13.8	7.9	1,064	6,250	10.1	5.8

Extent of One-Man Patrol Cars. A total of 204 of the 1,236 cities reporting use one-man patrol cars exclusively for police patrol. A combination of one- and two-man cars is used by 641 cities, and 391 use two-man cars exclusively. Of the 204 using one-man cars, 141 are in the 10,000 to 25,000 population group. As was the case last year, 68 per cent of the reporting cities use one-man patrol cars at least part of the time.

Shifts When One-Man Patrol Cars Are Used. Table XV shows for individual cities using one-man patrol cars, the shifts when such patrol cars are employed--day, evening, and night. Of the 845 cities using one-man patrol cars, 403 cities use them on day, evening, and night shifts, 152 use them on day and evening shifts, and 273 use them on the day shift only. The remaining 17 cities use one-man cars on other variations of patrol shifts.

TABLE 4

MANNING OF POLICE PATROL CARS IN CITIES OVER 10,000: 1952

Population Group	Number of Cities Reporting Motorized Patrol	Two-Man Patrol Cars Only		One-Man and Two-Man Patrol Cars		One-Man Patrol Cars Only	
		Number	Per Cent	Number	Per Cent	Number	Per Cent

TABLE XV

POLICE DEPARTMENT DATA FOR CITIES OVER 10,000: 1952

This table includes all of the 509 cities over 25,000 population and 787 of the 837 cities between 10,000 and 25,000, according to the 1950 census. All these data were reported to the Year Book late in 1951 and early in 1952 by city officials. "Work Hours Per Week" shows the average number of hours worked in seven days. Under "Overtime Pay," an "N" indicates no overtime pay, "S" pay at straight time, "H" pay at time and one-half, and "T" equal time off. Under "Salary of Patrolman—Entrance, Maximum," the figure to the left of the dash (-) is the total salary, including cost-of-living increases, paid to a full-time patrolman during his first 12 months on the force, and the figure to the right of the dash is the highest yearly salary, including cost-of-living increases, paid to a full-time patrolman not holding any promotional rank. Under "No. Days Vacation, Sick Leave" "N" indicates the city has no formal policy or rules governing vacation or sick leave. "Shifts with One-man Patrol Cars" indicates the shifts on which one-man patrol cars are used, "D" for day shift, "E" for evening shift, and "N" for night shift. A double dagger (‡) means the city uses only one-man patrol cars. The "Number of Patrol Cars" represents those used for regular police patrol service and excludes, as far as possible, cars used by detectives and officers, ambulances, and rescue trucks. Under "Numbers of Motorcycles, 2 and 3 Wheel," the number to the left of the dash is the number of two-wheel motorcycles, and the number to the right of the dash is the number of three-wheel motorcycles. "Total Expenditures for Department" includes new equipment and all other expenditures except payments by city into pension or retirement fund or payments to retired employees. A single dagger (†) indicates 1950 figures. Leaders (. . .) indicate data not reported. See preceding article for detailed explanation. Refer to Table IV for population figures for these cities.

POLICE CHIEF—HOW APPOINTED (shown only for cities over 25,000)

A—by city manager
B—by police or safety board
C—by city council
E—elected by the people
G—appointed by governor
M—by mayor
S—by police or safety commissioner or director

Traffic Administration

Developments in 1951

By Franklin M. Kreml

Director, Northwestern University Traffic Institute, and the Traffic Division, International Association of Chiefs of Police

CONVENING of a full-scale President's Highway Safety Conference in Washington, D.C., in June reflected growing public concern at the heavy increase in traffic fatalities since the end of 1949, following three years of consistent declines. At this conference more than 2,000 public officials, safety authorities, and civic and business leaders from all over the United States met to review preventive activities in states and cities and to inspire a general step-up in the action program all over the nation.

Exposure to accidents was mounting due to the biggest traffic volumes in history. At 52 million, 1951 motor vehicle registrations were more than 50 per cent higher than the prewar peak of 1941. Preliminary estimates of vehicle mileage indicate a total of nearly half a trillion miles—over a million miles a minute.

The rising curve of highway accidents in 1951 was climaxed at year's end by the nation's millionth traffic death, with the prospect that unless an accelerated safety effort could check the current rate of fatality increase, the 1952 toll would exceed 40,000 deaths, the highest since the advent of the automobile.

The year's traffic toll was approximately 37,500 deaths and 1,300,000 nonfatal injuries. A remarked increase is shown when these figures are compared with the 1950 figures of 35,000 deaths and 1,200,000 nonfatal injuries. The total economic losses resulting from traffic accidents in 1951 were estimated at $1,400,000,000. The 1951 record in traffic deaths is the highest in 10 years and the fourth highest in history.

The mileage death rate—deaths per 100,000,000 vehicle miles—was estimated at 7.7, compared with rates of 11.3 in 1945, 8.1 in 1948, 7.4 in 1949, and 7.5 in 1950.

The Bureau of Public Roads announced that in 1951 construction completed on federal-aid roads totaled 19,364 miles. This included 5,321 miles of primary highways, 13,863 miles of secondary routes, and 180 miles of urban routes. Total expenditures amounted to $722,502,763, of which $363,783,501 were federal funds. Commissioner Thomas H. MacDonald told the American Association of State Highway Officials at their Omaha meeting in October that accumulated deficiencies on principal state roads totaled 74,000 miles, and that the deficiency is growing by 5,000 to 6,000 miles a year.

Reflecting a great upsurge of interest in the highway problem, 35 national organizations, meeting in Washington at the call of the National Highway Users Conference, in November launched "Project Adequate Roads," with the objective of developing support for official road programs at the national, state, and local levels.

In October the Governors' Conference again urged a concerted attack on traffic accidents, continued review and study of laws, and special consideration to the enactment of the Uniform Vehicle Code. Legislatures of 27 of the 44 states meeting in regular session during the year enacted bills designed to bring their traffic laws into closer conformance with the code. Among cities, too, there was a noticeable increase in legislative activity aimed at closer approximation to recognized uniform standards.

Outstanding in this area of accomplishment were West Virginia's adoption of virtually all of Acts I, II, IV, and V of the Uniform Vehicle Code and Arizona's enactment of Acts II, and IV, following adoption of Act V in 1950. Fourteen states, including the two named, passed comprehensive financial responsibility bills. Statutory inspection of motor vehicles gained ground, after a decade of no progress, as Texas and West Virginia joined 12 states and the District of Columbia, which long since have provided for periodic vehicle inspection. Indications were that during the year an increasing number of states and cities were making comparative studies of their present traffic laws and the national uniform standards.

Following New Jersey's example of placing all traffic courts under statewide supervision and administration of the chief justice of the state supreme court, California by constitutional amendment adopted a somewhat similar plan. Under the new system, beginning January 1, 1952, all California trial courts of limited jurisdiction will be integrated under the jurisdiction of the state judicial council headed by the chief justice of the state supreme court.

One of the most significant events of recent years in relation to the traffic courts was the adoption by the 1951 conference of chief justices of state courts of a comprehensive set of resolutions directed toward the general improvement of traffic court administration. The resolutions were later endorsed in full by the Governors' Conference.

A record number of states took action during 1951 to help their cities ease downtown traffic congestion. The American Public Works Association reports that at least 17 state legislatures adopted laws designed to facilitate the establishment and financing of off-street parking facilities by some or all of their municipalities.

Arkansas cities are now permitted to use parking meter revenues for acquisition of parking lots and highway construction. California now permits cities to lease publicly owned property for periods up to 50 years for off-street parking. Connecticut permits municipalities to create parking authorities to finance off-street parking through bond issues without seeking special state legislative permission.

Delaware now permits cities to create parking authorities to acquire and operate parking projects and issue bonds for such purposes. Florida authorized all its municipalities to finance, construct, maintain, and operate parking facilities without special legislative permission. Idaho permits municipalities to issue revenue bonds for off-street parking facilities. Illinois authorized the Chicago Park District to operate underground parking lots.

In the future Indiana cities will be allowed to use parking meter revenue for retiring bonds issued for construction of parking facilities. Kansas now permits its first-class cities to acquire land for off-street parking facilities and to provide additional parking lots financed by issuance of revenue bonds to be amortized from parking lot and meter receipts. Massachusetts lawmakers approved installation of parking meters in city-owned parking lots and authorized investment by insurance companies in a proposed $12,000,000 parking garage under Boston Common.

Baltimore was authorized to incur indebtedness of $10,000,000 for parking purposes by the Maryland legislature. Montana authorized cities and towns to acquire land for parking lots and create commissions to establish off-street parking facilities. New Mexico authorized cities with populations of 4,000 or more to install parking meters, to acquire parking facilities, and to issue bonds against prospective meter revenue. North Carolina authorized municipalities to establish and operate parking facilities under supervision of a five-member municipal board.

Under a recently amended state constitution, Rhode Island cities are now permitted to condemn land for off-street parking facilities. In South Dakota new legislation requires that all cities with parking meters submit a proposal to their voters on whether half the meter revenue should be set aside for parking lots and areas. West Virginia authorized cities to establish and operate parking facilities under supervision of a five-member municipal board.

A considerable volume of research bearing on many phases of highway safety and efficiency was undertaken in 1951. The National Research Council, in cooperation with the Bureau of Public Roads, started a study of driver behavior in relation to accidents—one of the projects recommended by the Advisory Group on Highway Research of the President's Highway Safety Conference.

Through funds provided by the petroleum and automotive industries, the Highway Research Board is conducting a broad study of the parking problem in relation to the economic health of communities, retail business, and motor vehicle use.

A survey of parking financing methods, including case studies in some 25 cities, was conducted jointly by the National Retail Dry Goods Federation and the Automotive Safety Foundation.

Operating in cooperation with the Inter-Industry Highway Safety Committee, automobile dealers made a significant contribution to organized safety education. During the 1950-51 school year, dealers throughout the nation loaned approximately 5,700 cars for student practice driving instruction. Moreover, there was increasing evidence of active support among dealers of recommended highway safety programs, formation of local dealer safety committees, and hiring of paid staff personnel to activate programs on a state and local basis in cooperation with public officials and interested groups.

Accomplishments in the dispensing of public information on traffic safety were impressive. The volume of emphasis on traffic safety by all media, including newspapers, magazines, radio, television, and advertising, broke all records, in quantity and quality. For outstanding contributions to highway safety, Alfred P Sloan Radio-TV Awards were presented to two radio stations, a television station, a national network, a noncommercial educational station, and five advertisers.

The President's Highway Safety Conference in its 1951 session established a continuing Committee on Official Coordination, giving renewed emphasis to the importance of this basic element of the action program. Officials of most states and many communities made comprehensive studies and took action in various ways to strengthen official coordination among traffic safety organizations and in accident-prevention efforts.

To plan and direct a new integrated program, New Jersey, on November 30, by executive order, established a state coordinating council on traffic and safety, which includes representatives of municipal and other local officials. Also created was a new bureau of traffic safety, adequately staffed "to carry on continuous research and to make a scientific and technical approach to the intricacies of traffic operation and safety." Earlier, new official coordinating committees were formed in Louisiana, Maine, and Oklahoma, and state traffic safety agencies were reactivated in Georgia, Indiana, Maryland, and South Dakota. In Washington the state coordinating committee and a state safety council were given statutory authority. At the close of the year 42 states had formal agencies for coordination of official traffic safety responsibilities. There is ground for hope that this total, with the continuing assistance of the State and Local Officials' Street and Highway Safety Committee, will go higher in 1952.

During the year active statewide public support organizations, coordinating support with official programs and implementing the highway safety programs of parent national groups, continued to grow in number and effectiveness. The total number of states so organized reached 30, a new high record. There was a continued increase in the number of full-time staff personnel working on public support programs in the states.

Attempts were made during the year to unravel some of the complications of terminology, overlapping functions, and structural variations in the public support field. These attempts were concentrated in the National Committee for Traffic Safety and the Traffic and Transportation Conference of the National Safety Council.

Professional training of traffic safety personnel was given impetus in two specialized fields. Under a contractual arrangement with the American Association of Motor Vehicle Administrators, the Traffic Institute of Northwestern University conducted the first of four annual courses for chief driver license examiners, in March, 1951. Four regional courses for instructors of driver license examiners were conducted in the fall—at Northwestern University, Northeastern University at Boston, the University of Alabama, and the University of California. The AAMVA was given funds for this training program by the Farmers Insurance Group Safety Foundation, Los Angeles. This is the first professional in-service training in this important area of the traffic safety field. Thirty-five states and the District of Columbia are already participating in this new training program.

The other important area in which systematic, top-level training was inaugurated is civil defense. At the request of the Federal Civil Defense Administration, the Traffic Institute, with the assistance of a special committee of police executives and traffic specialists, laid plans for a training program in civil defense emergency highway traffic. The training program to be based upon these plans will be conducted regionally, with four to eight courses to be presented annually in different key areas of the United States.

Training operations for raising the general qualitative level of traffic safety efforts through professionalized training of personnel, continued to increase in quantity and quality in 1951. Major training institutions doing substantial work in this field are the Center for Safety Education at New York University, the Institute of Public Safety at Pennsylvania State College, and The Traffic Institute of Northwestern University. However, while the programs of these institutions continue to grow in scope and effectiveness, this growth has not been sufficient to place them on an expanding and self-sustaining basis commensurate with the growing problems in traffic which they are called upon to face.

The situation is at least partly due to the fact that each of these institutions relies to a considerable extent upon the continuing support of private groups interested increasingly in promoting traffic safety. As the traffic problem grows, and the need for such training along with it, the need for support grows. Up to the present time substantial financial support has been given to these training operations by the Association of Casualty and Surety Companies, the Kemper Foundation for Traffic Safety, the Automotive Safety Foundation, the Farmers Insurance Group Safety Foundation, and the National Association of Automotive Mutual Insurance Companies.

There is a clear need for a substantial broadening of the base of support for training operations in this field. The official agencies of governments, charged with responsibility for effective supervision of traffic, must give increasing support to the professional training of their own personnel working in this field. This must become part of the regular fiscal operations of state and municipal governments. At the same time this support must be increasingly supplemented by support from additional private groups. All this is required if the training operations of the institutions named above and others are to measure up to the rapidly growing demands for more traffic safety.

Important work was done in 1951 through field service provided by the Traffic Division of the International Association of Chiefs of Police. The purpose of this service is to give direct aid to official agencies responsible for traffic supervision in response to specific requests for such aid. Major work of this kind was done in Philadelphia, Pittsburgh, Chicago, and Palo Alto, California, and in the state of Alabama.

In the National Traffic Safety Contest, conducted by the National Safety Council, grand award winners for 1950 were Pennsylvania and Wichita. Cities winning first places in their respective population groups were: Los Angeles (over 1,000,000); San Francisco (750,000 to 1,000,000); Minneapolis (500,000 to 750,000); Denver (350,000 to 500,000); Syracuse (200,000 to 350,000); Wichita (100,000 to 200,000); San Jose, Cal. (50,000 to 100,000); Dubuque, Iowa (25,000 to 50,000); Stillwater, Oklahoma (10,000 to 25,000).

California was selected for special recognition among the states in the Annual Traffic Court Award Contest conducted by the American Bar Association. Top winners among the cities in their respective population groups were Detroit, San Francisco, Pittsburgh, Louisville, St. Paul, Phoenix, Fresno, Inglewood (California), and Summit (New Jersey). Seven hundred and five cities and all of the states participated in the award competition.

The grand award in the National Pedestrian Protective Contest, conducted by the American Automobile Association, went to the state of Kansas. Wichita and Belmont (Massachusetts), earned grand awards for best city performances in safeguarding pedestrians.

Ten states won awards in the National Driver Education Award Program, sponsored by the Association of Casualty and Surety Companies, for offering courses in driver education in at least 50 per cent of their secondary schools during the 1950-51 academic year. These states were Arizona, California, Illinois, Massachusetts, Michigan, Minnesota, New Jersey, North Dakota, Oklahoma, and Wisconsin.

The number of high schools offering both classroom instruction and practice driving increased from 7,197 in the 1949-50 school year to 7,929 in 1950-51. This represents approximately 30 per cent of the nation's high schools.

Five states and 10 cities took the highest honors for exceptional achievement in the field of traffic engineering in the annual recognition program of the Institute of Traffic Engineers. The 1950 state winners were Arkansas, California, Connecticut, Minnesota, and Washington. The city winners were Los Angeles, Detroit, Washington, D.C., Milwaukee, Denver, Rochester, Sacramento, Fresno, Lafayette, Indiana, and Peru, Indiana.

In the annual recognition of states and cities by the International Association of Chiefs of Police, for outstanding work in traffic law enforcement in 1950, four states and 11 cities were given first place awards. The states were Rhode Island, Oklahoma, Washington, and California. The cities were Los Angeles, Washington, Minneapolis, Oakland, Dallas, Dayton, Pasadena, San Jose (California), Kalamazoo, Oak Ridge (Tennessee), and Richland (Washington).

Traffic Safety Yardsticks

By Harry Porter, Jr.

Senior Traffic Engineer, National Safety Council, Chicago

TRAVEL on streets and highways in the United States reached nearly 500,000,000,000 vehicle miles in 1951, an 8 per cent increase over 1950. Traffic deaths in 1951 approached 37,500—also an increase over 1950. One half of this travel occurred in urban areas on 10 per cent of the total street and highway mileage. This points out that safe and efficient movement of traffic is definitely an important municipal responsibility and must be accepted as such since it has a definite effect on municipal economy.

The effectiveness of transportation on city streets and the improvements required to reduce delay and accidents can only be determined by an Inventory of the city's transportation facilities. The Annual Inventory of Traffic Safety Activities and analysis service, a medium by which cities can "take stock" of their traffic control and accident prevention programs, grew out of the stimulus given traffic safety by the President's Highway Safety Conference. Its roots lie in the National Traffic Safety Contest which the National Safety Council has conducted since 1931. Table XVI shows selected items in traffic engineering, parking, and enforcement from the Annual Inventory for 477 cities over 10,000 population.

The Inventory is set up to provide the most possible help to city officials. Its policy-making body is the State and Local Officials National Highway Safety Committee. Officials are represented on the Inventory Advisory Committee made up principally of city and state "Inventory Representatives."

Organizations such as the American Association of Motor Vehicle Administrators, Institute of Traffic Engineers, International Association of Chiefs of Police, National Commission on Safety Education, National Education Association, and American Bar Association have taken an active part in the development of the Inventory questionnaire and appraisal measures for various phases of traffic control and safety. "Standards" have been established for some phases of traffic control and traffic safety, but in most cases the performance of the top 30 per cent of the cities of similar population is used as a guide for appraising a city's program.

The question may well be asked, "Specifically, what will the Annual Inventory do?" (1) It permits city officials to appraise the current status of their traffic control and accident prevention activities by comparing it in detail with nationally accepted measures and the performance of other cities of comparable size; (2) it permits officials to measure progress, or lack of it, from year to year; and (3) it calls the attention of officials to questions which possibly never have been considered or points out situations that city officials may not have known about.

Most of the cities under 100,000 population face similar problems, particularly in the engineering field, and have accepted certain types of regulations and controls as the solutions for reducing traffic delays and accidents. Inventory reports from many cities show that adoption or expanded use of the following traffic control measures have been given high priority:

1. One-way streets.
2. Prohibiting parking during rush hours or at all times.
3. Prohibiting turning movements at certain intersections.
4. Establishment of truck routes.
5. Modernization of traffic control signals to allow greater flexibility in timing.
6. Elimination of angle parking.

Parking, of course, is a serious problem in all cities. The 1951 Inventory reports from nearly 700 cities show that more than 40 per cent added off-street parking facilities during 1951.

Table XVI shows data reported by 477 selected cities in the 1951 Annual Inventory of Traffic Safety Activities. Individual city comparisons on an actual or quantity basis can easily be made, but it must be made clear that the table shows only a few of the items reported for the Annual Inventory. Appraisal measures (standards and 30 per cent performance levels) are not shown, but this information is available from the National Safety Council.

All cities in the United States over 10,000 population are eligible to participate in the Inventory of Traffic Safety Activities without cost. Any city executive, upon submitting completed Inventory forms may avail himself of an analysis of his city's traffic control and safety program. This analysis report contains a summary of conclusions for continued progress and improvement in the various phases of traffic control and safety. The National Safety Council will gladly furnish additional information upon request.

Explanation of Column Heads in Table XVI

"No. Emps. on Traffic Eng'rng."—Full-time equivalent of employees on traffic engineering from all city departments working on administration, surveys, and investigations; does not include stenographic and clerical employees, etc.

"No. Off-Street Parking Spaces: Total; Per 1,000 Vehicles"—Shows the number of off-street parking spaces in business areas available for public use and includes spaces in both publicly- and privately-owned lots and garages; does not include lots "for employees only" or parking lots in park areas.

"Miles of Streets: Paved"—Includes concrete, brick, asphalt, and bituminous concrete; does not include oiled surface and gravel streets.

"Miles of Streets: One-Way"—Includes street mileage that is one-way during rush hours only.

"Miles of Streets: Centerlines Maintained"—Includes all street mileage where center or lane lines are regularly maintained.

"Miles of Streets: Parking Prohibited—All Times; Parking Prohibited—Rush Hours"—Limited to miles of streets in business areas and on through streets; does not include parking prohibitions for bus stops, loading zones, theatre exits.

"Miles of Streets: Angle Parking Allowed"—Refers only to miles of arterial and business area streets where angle parking is allowed.

"No. Police on Traffic"—Full-time equivalent of police officers assigned to traffic law enforcement (See Table XV for police officers in each city.)

"Chemical Tests Used"—All types of chemical tests and analyses including blood, urine, breath, and saliva.

TABLE XVI

TRAFFIC INVENTORY DATA FOR SELECTED CITIES OVER 10,000: 1951

This table includes 477 cities over 10,000 population. These data were reported by city officials to the National Safety Council early in 1952 as part of the Annual Inventory of Traffic Safety Activities. The city employee primarily responsible for traffic engineering is shown in the column "Traffic Engineer" (see code). Explanation of other column heads is shown on preceding page. Leaders (. . .) indicates data not available.

TRAFFIC ENGINEER

T—Full-time Traffic Engineer

A—City Manager

E—City Engineer

P—Police Chief

PD—Planning Director

PW—Public Works or Public Safety Director

X—Other City Employee (police sergeant or lieutenant; planning technician, etc.)

City	Traffic Eng.	No. Emps. on Traffic Eng'rng.	No. Off-Street Parking Spaces		Miles of Streets						No. Police on Traffic	Chemical Tests Used

Municipal Parking Lots

FORTY-THREE per cent of the cities with populations over 10,000 operate one or more off-street parking lots—484 out of 1,137 cities reporting. The city government owns and operates the lots in 465 cities and leases the land for operation in 19 cities. A total of 96 cities established lots for the first time in 1951, and 155 other cities placed additional parking lots in service during the year. The 484 cities over 10,000 operate a total of 1,163 parking lots. Sixty per cent of the cities operating parking lots are in the 10,000-to-25,000 population group.

Table 1 shows the number of cities with parking lots and the number of lots by population groups. In the group over 500,000 population Detroit and Cincinnati established additional parking lots during the year while Houston and Milwaukee established parking lots for the first time. Columbus, Ohio, in the 250,000-to-500,000 group, also established a parking lot for the first time. Other cities over 100,000 population establishing lots for the first time during 1951 are: Allentown, Pennsylvania; Knoxville, Tennessee; Phoenix, Arizona; Providence, Rhode Island; Sacramento, California; and Springfield, Massachusetts. The 251 cities establishing lots in 1951 opened a total of 387 lots.

Methods of Financing. Of the 251 cities establishing new lots in 1951, 225 reported on the methods used in financing the land and improvements. Parking meter receipts were used in 129 cities, general tax revenue in 48 cities, general obligation bonds in 14 cities, revenue bonds in 7 cities, special assessments against the benefited property owners in 6 cities, a combination of general taxation and parking meter receipts in 8 cities, and other combinations of these sources of revenue in 5 cities. Four cities used land already owned by the city, while Wichita, Kansas, used street right-of-way condemnation to acquire land. The cities of Barberton, Ohio, Ft. Collins, Colorado, and Woburn, Massachusetts, received gifts of land from local merchants, businessmen's associations, or the chamber of commerce. The cities using the special assessment method of financing were Garden City, New York; Grand Forks, North Dakota; Cambridge, Massachusetts; Ocala and West Palm Beach, Florida; and Pomona, California. The cities that used revenue bonds were Elmhurst, Illinois; Fairmont, West Virginia; Fort Wayne, Indiana; Highland Park and Royal Oak, Michigan; Miami Beach, Florida; and Pasadena, Texas.

TABLE 1

NUMBER OF CITIES OVER 10,000 POPULATION HAVING PARKING LOTS IN 1951, AND NUMBER OF PARKING LOTS, BY POPULATION GROUPS

Population Group	No. of Cities Reporting	No. of Cities		No. of Cities Establishing Lots in 1951		No. of Parking Lots	
		With Parking Lots in 1951	With Parking Meters on One or More Lots	For the First Time in 1951	Additional Lots in 1951	Total	New Lots in 1951
Cities over 500,000	17	6	1	2	2	11	6
250,000 to 500,000	21	5	1	1	2	28	7
100,000 to 250,000	63	26	11	7	5	61	27
50,000 to 100,000	117	62	38	12	26	71	77
25,000 to 50,000	236	97	51	22	43	298	96
10,000 to 25,000	683	288	64	52	77	694	174
All cities over 10,000 . . .	1,137	484	166	96	155	1,163	387

Vehicle Capacity of Lots. City officials were asked to report the total vehicle capacity of all of their municipal off-street parking lots. The capacities reported by 474 cities were: 50 or less cars in 49 cities, from 51 to 100 cars in 96 cities, from 101 to 250 cars in 153 cities, from 251 to 500 cars in 109 cities, from 501 to 1,000 cars in 43 cities, and 1,001 or more cars in 24 cities.

Parking Lot Charges. Table 2 shows the charges applicable in 1951 for parking in city-owned lots in 192 reporting cities. This is an increase of 76 cities over the 116 cities that had parking lot charges in 1950. The most common charge is five cents per hour in 87 cities. The highest charge reported was 25 cents per hour in Madison, Wisconsin, while the lowest was 5 cents for six hours in York, Pennsylvania. Thirty-nine cities report a daily charge either singly or in combination with other charges. Daily charges range from 10 cents to 50 cents, and 19 cities reported a charge of 25 cents per day. Of the 13 cities using monthly rates four reported a charge of $4.00 per month with such charges ranging from $2.50 to $6.00. A total of 166 of the 192 cities making charges reported that they have placed parking meters in some or all city-owned lots.

Parking Garages. Six cities reported ownership and operation of public parking garages: Detroit and Grand Rapids, Michigan; Bridgeport, Connecticut; Cleveland, Ohio; Rochester, Minnesota; and Bluefield, West Virginia. Public parking garages are owned by the city but leased for private operation in San Francisco, California; Des Moines, Iowa; and Boston, Massachusetts. Another six cities are in various stages of planning, land acquisition, and construction of garages: Fresno and Los Angeles, California; Denver, Colorado; Kansas City, Missouri; Pittsburgh, Pennsylvania; and Memphis Tennessee.

Baltimore has helped finance several downtown garages built by private interests by advancing long-term loans for most of the construction cost. Retail merchants in Philadelphia have set up a revolving credit fund for loans to the city parking authority for the construction of public parking garages.

Ann Arbor, Michigan: 10 cents for first two hours, 5 cents for each additional two hours.

Asbury Park, New Jersey: City has six lots. Charges on four lots are 10 cents for the first hour and 5 cents per hour thereafter; one lot, 50 cents all day; one lot, free parking.

Aurora, Illinois: City has four lots; three are free.

Battle Creek, Michigan: City has six parking lots. Three lots are equipped with one hour meters at 5 cents per hour; on two lots the charges are 20 cents per car for each time it is in the lot. On the other lot, charges are 15 cents for three hours and 5 cents for each additional hour.

Benton Harbor, Michigan: City has two lots. One lot has parking meters where parking is allowed each night at 50 cents per night. The second lot rents parking space at $4 per month.

Binghamton, New York: Three hour limit on parking.

Burbank, California: City has two lots, charge shown applies only to one lot. The charges on the second lot are 5 cents for three hours with a maximum of nine hours.

Burlington, Vermont: Five hour limit on parking.

Council Bluffs, Iowa: City has three parking lots. Charges shown apply to one lot. One lot charges 5 cents per hour and one lot is free.

Davenport, Iowa: City has three lots. Charges shown apply only to the metered lot. One lot is free and one lot charges 25 cents for three hours or 40 cents for eight hours.

Detroit, Michigan: 15 cents for the first hour, 10 cents for each additional hour with a 50 cent maximum charge.

Fargo, North Dakota: 25 cents for the first two hours, 5 cents for each additional hour.

Flint, Michigan: Charges shown apply to metered lots. On attendant-operated lots, charges are 5 cents for two hours and 5 cents for each additional hour.

Gloversville, New York: City has four parking lots; three are free.

Hempstead, New York: City has ten parking lots; eight are free.

Highland Park, Michigan: City has a total of 288 parking places with charges as follows: for 80 meters, 5 cents per hour with a two hour limit; for 104 meters, 5 cents per hour with a 5 hour limit; for 104 meters, 5 cents for two hours with a 10 hour limit.

Idaho Falls, Idaho: City has two parking lots; one is free.

Kankakee, Illinois: City has three lots. The charges shown apply to two lots, the other lot charges 5 cents for two hours.

Kenosha, Wisconsin: The city has two parking lots; one is free.

LaCrosse, Wisconsin: City has six lots. Two lots rent spaces for $2.50 per month; the other four lots are metered, some at 5 cents per hour, some at 5 cents for two hours.

LaGrange, Illinois: City has three parking lots; one is free.

Leavenworth, Kansas: City has two lots; one is free.

Madison, Wisconsin: Stalls are also rented at $4 and $2.50 per month.

Miami Beach, Florida: On some city lots charges are 5 cents for one and one-half hours.

Modesto, California: City has five lots; two are free.

Monessen, Pennsylvania: City has two lots; one is free.

Montclair, New Jersey: City has 9 lots; four are free.

Mount Pleasant, Michigan: City has two lots with a total of 70 spaces. Fifty spaces are metered.

New Rochelle, New York: Three hour limit on parking.

Norwich, Connecticut: Special rate for weekly parking.

Oil City, Pennsylvania: City has two lots; one is free.

Plainfield, New Jersey: City has three lots; one is free.

Rahway, New Jersey: City has three lots; two are free.

Riverside, California: Parking lot charges vary depending on location of lot: 5 cents for one hour, 5 cents for two hours, 5 cents for two and one-half hours, and 5 cents for five hours.

Rochester, Minnesota: For some spaces, charges are 5 cents for two hours.

Royal Oak, Michigan: Two lots are metered, some places in each at 5 cents for one hour and the rest at 5 cents for two hours.

St. Joseph, Michigan: City has two lots; one is free.

St. Petersburg, Florida: Two hour limit on parking.

Saginaw, Michigan: City has two lots; one is free.

Sioux Falls, South Dakota: City has five lots; four are free.

Stamford, Connecticut: City has 3 lots; one is free.

Trenton, New Jersey: Parking lot charges 15 cents per night and $4 per month in addition to charges shown.

Parks and Recreation

Developments in 1951

By Arthur Williams

National Recreation Association, New York

THE outstanding event of 1951 in the field of recreation was the impact of the national defense program. National Production Authority controls tightened and brought recreation construction practically to a standstill. On the other hand the armed forces gave increased attention to the recreation needs of their personnel on-post and in "leave" communities. The United States Air Force established an Office of Community Services and the Army a Community Services Branch of its Special Services Division to provide channels for liaison and cooperative planning between the military the community and the military and such national voluntary agencies as the USO and the National Recreation Association.

Public recreation and park facilities and services are playing an important part in meeting the recreation needs of service personnel and also defense industrial workers and the families of both groups. Local recreation groups developed increased cooperation with local civil defense authorities. The NRA Midcentury Recreation and Park Year Book records (for the first time in one place) the 1950 work of 2,277 municipal and county recreation and park agencies serving 2,175 communities. The Year Book reports 17,142 parks and recreation areas with a total acreage of 644,067. Expenditures reached $268,911,957. There was continued action in the areas of consolidation of parks and recreation, county organization for recreation, and close cooperation between recreation and school authorities.

Legislation. Congress passed the "Maybank-Spence" Bill now known as Public Law 139 which authorized the appropriation of federal funds for housing and community facilities and services in areas officially designated by the federal government as "critical defense areas." Community recreation facilities and services are included in those authorized by the law. Although Congress made no appropriation for recreation during its first session, requests will be presented to it in 1952 for funds for the most needy areas.

North Carolina amended its recreation enabling act to authorize municipal governing bodies to appoint without restrictions recreation commissions with five or more members, and to eliminate the requirement for a special registration in referendums on recreation tax levies and bond issues. Illinois consolidated its three park district laws into one and authorized Chicago on a favorable referendum vote to raise up to two mills for school recreation. Wyoming passed an act permitting cities, towns, villages, counties, and school districts to levy one mill for recreation; this mill however would not be exempt from the over-all constitutional tax limit. Kansas amended its recreation law to include all cities and towns and Nebraska clarified the process for discontinuing a special recreation tax by providing that it can be discontinued only by the vote process by which it was established. Missouri authorized first- and second-class counties to vote levies for park purposes. Iowa established a new functional budget system for municipalities with recreation one of the specified functions. Under recreation are parks, public recreation, bands, museums, and art galleries. California amended its education code to raise the maximum tax rate of school districts, to permit the operation of school camps outside school district limits, and to permit free or paid use of schools as civic centers at the discretion of school districts. Ohio passed House Bill 480 permitting until December, 1952, a majority of 55 per cent for the passage of recreation referendum tax votes.

Organization and Reorganization. The 1950 Park and Recreation Year Book published in June, 1951, shows that public year-round recreation programs are still administered largely by recreation boards or departments operating as a separate function. Of 680 such programs reported, 420 are by separate boards or departments of which 280 have official policy-making boards; 187 are by park or park and recreations agencies of which 110 have official policy-making boards; 32 by school authorities; and 41 by other municipal agencies.

The interest in consolidation of park and recreation agencies continues with a number of cities where action is "pending" but relatively few where such reorganization actually took place. Closer cooperation is evident also between city and school authorities and between cities and counties. Some of the park and recreation consolidations reported are Metuchen, New Jersey; Allen Park and Hazel Park, Michigan; Akron and Boardman, Ohio; Denver, Colorado; Columbia and Marshall, Missouri; Arcadia, Oceanside, and Palo Alto, California; Revere, Massachusetts; and Dover and Keene, New Hampshire. A number of Iowa cities are interested in consolidation, but state legislation may be necessary to remove some present legal difficulties.

Personnel. The growing acceptance of leadership as the most important element in a successful recreation program is reflected in the Park and Recreation Year Book. A total of 58,029 professional leaders were reported by 1,710 cities, of which 6,784 were employed full-time the year-round. These figures represent all-time highs, the total being nearly 20 per cent greater than in 1948. New executive positions are still largely in smaller cities. Only 4 per cent of top executive positions filled in 1951 were in communities over 50,000 population; 76 per cent were in places under 15,000; 53 per cent in communities under 10,000. The armed forces and voluntary agencies servicing them employed a large number of recreation leaders.

In general executives and top year-round supervisors fared better in salary increases than other personnel, particularly seasonal and part time-workers. The range of executive salaries for positions filled during the year was $3,000 to $6,000. The median salary was $4,200, which is $200 more than in 1950.

The rapid development of college training programs in recent years is beginning to show results in a generally higher caliber of professional leadership. The National Roster of Recreation and Park Personnel, undertaken in 1951 by the National Recreation Association as one of its defense service projects, is in a unique development in the field. The roster is an actual inventory of manpower available for use in the most effective way. It helps to insure complete mobilization of recreation and park workers in the event of any national disaster. More than 11,000 registration cards were sent out on request, some 5,000 of which have already been returned and processed. The Association also is appointing a national advisory committee on personnel to assist with the increasing number and complexity of problems related to recruiting, training, and placing recreation leaders.

Activities. Recreation for older adults continued to challenge the interest of state and local groups. Several statewide studies of needs were made, and 392 cities reported special recreation activities for this group. The teen-ager also continued to receive special attention. The presence of younger servicemen in communities highlighted this problem. Camping, particularly day camping, expanded substantially. Many communities are increasing their services in music, drama, art, crafts, and hobbies. Square dancing lost none of its popularity. The presence of servicemen in communities has resulted in the opening of special centers and the organization of special programs by public recreation departments. A majority of cities, however, are trying to make the servicemen and women feel at home by stimulating participation in their regular activities and centers.

Revenues and Expenditures. Local tax support for recreation continued to be spotty in 1951. Some regions showed stronger support, and others smaller appropriations; within this range there were many variations. Although a majority of cities and counties showed budget increases they generally were sufficient only to meet increased salaries and operational costs. They did not permit significant increases in services. Recreation encountered greater financial difficulties in the larger metropolitan centers than in the smaller cities of the country. Some of the communities which reported substantial budget increases are Baltimore, Maryland, $ 81,000; Baltimore County, Maryland, from $59,000 to $127,000; Des Moines, Iowa, $54,000 to $72,000; Long Beach, California, $588,000 to $702,000; Merced County, California, $72,000 to $136,000; San Diego, California, $454,000 to $531,000; Caldwell and Burlington, New Jersey, 50 per cent each; Waterford, South Dakota, 40 per cent.

There were fewer referendums for bond issues and tax levies than during 1950, partly because of government restrictions on new construction. Relatively fewer such votes were favorable due to increased public sentiment against more taxes. However Union and Hudson counties, New Jersey, voted to increase the county park and recreation tax from three-fourths of one mill to one mill. Favorable recreation referendum votes also were given in Lake Charles and Shreveport, Louisiana; Lincoln, Oglesby, and Batavia, Illinois; Eugene, Oregon; Minden and Fremont, Nebraska; Fort Madison and Vinton, Iowa; Kingman and Osawatomie, Kansas, Massilon, Ohio.

Among the bond issues passed were Raleigh, North Carolina, $250,000;

Palo Alto, California, $150,000; Allentown, Pennsylvania, $500,000; Wichita, Kansas, $ 150,000; Hutchinson, Kansas, $1,000,000; Waterloo, Iowa, $350,000; Kennewick, Washington, $100,000; University City, Missouri, $300,000; Sanger, California, $120,000; Fort Worth, Texas, $500,000; Corpus Christi, Texas, $150,000; and Arlington County, Virginia, $882,000.

Federal Activities. The Federal Inter-Agency Committee on Recreation completed its work on a federal recreation policy after consulting with the governors of the states and the national nongovernmental organizations. The statement has been transmitted to the Bureau of the Budget for its consideration. The 1951 tax law exempts from federal admission taxes "swimming pools, bathing beaches, skating rinks, or other places providing for physical exercise, operated by any state or political sub-division thereof if the proceeds therefrom inure exclusively to the benefit of the state, political subdivision."

In an amendment to General Regulation 14 on September 19, 1951, the Office of Price Stabilization exempted from price ceiling any services supplied directly by the United States, states, and municipalities. At the request of the National Park Service a clarification of this ruling was issued by OPS. The regulation provides that such services as admission, parking and service fees, lodges, cabins, group camps and tent and trailer campsites, fees for picknicking, swimming, summer and winter sports, horseback riding, and boating are no longer under price regulation. It is important to note that this exemption does not extend to the rates, fees, or charges for services which are connected with the sale of any commodity or to the rates, fees, or charges of concessionaries or lessees.

Activities by States. The Texas State Youth Development Council is studying the possibilities of meeting the recreation needs of small communities through county recreation programs. The Michigan Inter-Agency Council for Recreation published "Meeting Recreational Needs with Resources," an inventory of the functional and related services of state government agencies and other selected state wide organizations. A conference on community recreation was sponsored by the director of community services and institutes of the University of Nebraska Extension Division out of which came a "Nebraska Recreation Directory—1951." Maryland's Department of Forests was reorganized as a Department of Forests and Parks. Maryland is making a state wide study of park and recreation areas.

New York, Wisconsin, Florida, California, and other states were active in the area of recreation needs of older people. Minnesota organized a new State Interagency Recreation Council with representation from such state agencies as youth conservation commission, state parks, mental health, highways, business research and development, civilian defense, and the University of Minnesota. Tennessee completed a preliminary survey of community supported recreation programs. Several states were active in assisting local communities with their community recreation planning.

Planning. Recreation planning on a community-wide basis continued to be wide spread. State agencies such as recreation commissions, planning boards, youth commissions, and universities were particularly active. Among these states were California, Minnesota, North Carolina, Tennessee, and Wisconsin. Cities that made local community recreation surveys included Albany, Georgia; Ogden, Utah; Utica, New York; Akron, Ohio; Amsterdam, New York; Lima, Ohio; and Waterford township, Michigan. Innumerable other cities were active in individual area planning and development, but building planning and construction were at a minimum, due to federal restrictions and materials shortages.

Professional Organization. The National Recreation Association (315 Fourth Avenue, New York 10) served on request nearly 1,000 communities throughout the country through its district and special field workers. More than 6,000 communities were helped through correspondence and consultation at headquarters. More than one hundred training institutes were conducted by Association workers to assist communities in the training of their employed and volunteer workers. State government agencies were assisted by field workers with their state recreation problems. Special field, correspondence, and bulletin services were given to business and industrial organizations on recreation programs for workers. The Thirty-third National Recreation Congress was held at Boston and attended by recreation leaders from practically every state and several foreign countries. The American Recreation Society (1420 New York Avenue, N.W., Washington 5, D.C.) in 1951 made surveys of state recreation service, standards for hospital recreation workers, and the supply and placement of college graduates. The Society established a new section on industrial recreation and one on state recreation. Attention also was focused on certification of recreation personnel. The American Institute of Park Executives (30 N. LaSalle Street, Chicago 2) in 1951 developed a long-term program which was set forth in a pamphlet entitled "A Prospectus for Improving Administration of Public Parks and Recreation Systems."

Schools and Education

Developments in 1951

By J. B. Edmonson

Dean, School of Education, University of Michigan

During 1951 the public schools were much in the limelight because of the stream of criticisms voiced by individuals and organizations. Many articles for and against certain practices in education were published in magazines and newspapers and many speeches were made. In some communities the critics of public schools were able to elect their candidates to boards of education and in some instances the tenure of school officials was threatened. While public education has developed as a result of continuous struggles between conflicting forces, the current criticisms have been more disturbing than those in recent decades and there are some observers who believe that these attacks should stimulate the advocates of free public education to organize for all-out defense of the aims, the scope, and the basic policies of the American educational system. As the year closed the number of citizen committees studying local and state educational problems was increasing and much constructive leadership was being supplied by the National Citizens Committee on Education.

Schools also were faced with continuing problems of finance, teacher shortages, lack of building materials, and related problems. Among brighter items of news was the Internal Revenue Bureau's decision allowing teachers to deduct expenses for attendance at summer sessions of colleges provided such work was required by school authorities. The decision of Congress to end the admissions tax on school events was helpful. On the national front efforts to get more steel for school construction received much attention as well as efforts to secure a fair share of the TV spectrum for school and college stations. More federal money for school districts was also sought. School administrators continued their concern about self-appraisal and self-improvement—with help from the W. K. Kellogg Foundation and from professional organizations.

An outstanding event of 1951 was the activation of seven major pilot centers for the training of school administrators at the universities of Chicago, Ohio, Oregon, and Texas, and at Harvard, Columbia, and Peabody. In the area of the college and research librarianship, the outstanding event was the completion of the facilities housing the midwest interlibrary center in Chicago. Television became a force in education as evidenced by the allocation by the FCC of 209 TV frequencies to education and by a grant from the Ford Foundation of $2,000,000 to promote station development and programing of educational material in both the radio and television fields.

School District Reorganization. The number of school districts in United States was reduced 33.8 per cent from 1932 to 1950. The states effecting the largest reductions were West Virginia 88 per cent, Arkansas 87 per cent, Idaho 69 per cent, Washington 67 per cent, Illinois 62 per cent, and Oklahoma 56 per cent. Consolidation of attendance units rather than reorganization of administrative units appears to have been the general practice. In states which have achieved a sound school reorganization a large portion of the school support comes directly from the state. The extent and method of accomplishing school district reorganization in each state was set forth in a report published late in 1951 entitled "Reorganization of School Districts" by Dorothy C. Tompkins (Bureau of Public Administration, University of California).

Legislation. In the October issue of the National Education Journal an extensive review was given of the 1951 achievements in state school legislation based on reports from 43 states. Much of the legislation related to funds for school support, teachers' salaries, retirement annuities for teachers, and the reorganization of school districts. Some of the more significant new laws were: making segregation in both elementary and high schools a matter of local discretion in Arizona; providing that the existing loyalty oath for all public employees including teachers will be written into the constitution if approved by voters at the next election in California; requiring liability insurance for schoolbus owners in Delaware; facilitating reorganization of school districts, automatically dissolving several hundred districts in Illinois; creating a school survey commission to determine the need for reorganization of districts in Indiana and raising local tax limits in Iowa.

Other laws passed in 1951 included: adopting recodification of the school laws, including amendments for school-district reorganization, in Kansas; providing state funds to raise teachers salaries an average of $310 for the 1951-52 school year in Kentucky; providing a teacher-certification law and fixing a minimum salary of $2,300 for teachers in Massachusetts; approving social security coverage for noncertificated school employees in Missouri; taking steps toward establishing a state board of education in Nebraska; authorizing transportation of nonpublic-school pupils provided general county funds are used in New Mexico; fixing standards to guide the state department in approving plans for building construction in New York; providing a minimum-salary schedule of $2,400 and $2,600 starting salaries for teachers with bachelor's and master's degrees, respectively, in Ohio; supplying free textbooks beginning with the first grade and reaching as far as possible under an allotment of $2.50 per pupil per year in Tennessee; and authorizing a public recreation and playground program in Wyoming.

School Superintendents. A study made by the research division of the National Education Association on the legal status of school superintendents shows that certification requirements applicable to the position of superintendent are defined in all but five states. The dismissal of city superintendents is regulated by law in 19 states. The period for which a city board of education may employ a city superintendent is not usually fixed in law, although one-half of the states have established a maximum number of years for the contract period of superintendents.

In 1951 eight women were city superintendents in 1538 cities over 2,500, and only one of these cities was over 30,000. For cities over 30,000 women were elementary-school principals in 56 per cent of the cities, supervisors and directors in 48 per cent, junior high school principals in 9 per cent, and senior high school principals in 8 per cent.

School Construction. In 1951 many communities launched school building programs in spite of high costs. Cities were forced to provide new buildings because of the increase in birth rate several years ago, the deterioration of existing buildings, and because of insufficient construction in the past two decades. Few new schools were built during the thirties because of financial stringencies, and during the defense preparation period and World War II few new schools were constructed due to shortages and high costs of materials and labor. After the war the high cost of labor and materials and continued shortages caused many communities to postpone needed building programs.

The over-all cost of school construction more than doubled from 1939 to 1951. A classroom with related facilities which would have cost $13,000 in 1935-39 cost an average of $30,000 in 1951. The United States Office of Education's estimated minimum need of 600,000 new classrooms by 1957-58 will cost 18 billion dollars as against 7.8 billion dollars for equivalent construction in 1939.

Teachers' Salaries. Teachers continued to suffer from the inability or unwillingness of school districts to readjust salaries in terms of the decreased buying power of the dollar. The average salary for the public-school instructional staff in 1950-51 was $3,080. In 1939 the average teacher earned 12 per cent more than the average employed person but in 1951 the average salary was 4 per cent less than the average in all other fields. Had teachers wages remained in the same relative position to other employment, teachers would have been earning 12 per cent or $500 more than they received in 1951.

School Enrollment. In 1951-52 enrollments in elementary schools were 800,000 higher than the preceding year, largely because of the influx of "war-babies" and postwar babies. In 1952-53 an expected 1,600,000 more may be expected than for the 1950-51 academic year. By the end of the present decade seven million more children will be in school than there were enrolled in 1949-50.

The public schools devoted much time in 1951 to studies of pupils who drop out. But the percentage who complete high school has been increasing. A survey released by the Office of Education reveals that 333 out of every 1,000 pupils who were in the fifth grade in 1926-27 were graduated from high school in 1934. In 1948 high schools graduated 481 out of every 1,000 who were in the fifth grade in 1940-41.

Enrollments in institutions of higher education in the fall of 1951 totaled 2,116,000, or 7.7 per cent less than the fall enrollment of 1950. Men students totaled approximately 1,400,000, a drop of 10.9 per cent from 1950, women students 718,000, a drop of only 1.3 per cent. More significant was the fact that entering freshman students were 472,000, down 8.7 per cent. Incoming men students dropped 12.3 per cent, women students, 2.7 per cent. Enrollment of veterans decreased 32.1 per cent to a total of 389,000.

The decline in enrollment was not as large as was forecast in the summer of 1951 and was substantially less than the pessimistic forecasts of a year ago. But the enrollment outlook for the colleges and universities is not a bright one as the low birthrate of the thirties is now beginning to be felt by the colleges.

Rural School Survey. A nationwide survey of rural schools by the New York Times indicated that about half the nation's 26 million public-school children attended rural schools. Nearly three and one-half million children were being deprived of adequate education because of inadequate buildings, poorly-trained teachers, double sessions, and part-time instruction. The survey showed that the most promising developments in rural education were the reorganization of school districts and the consolidation of rural schools with single-room buildings disappearing at the rate of about 7,500 a year.

National Board of Education Proposed. The National Education Association in 1951 urged Congress to create a national board of education as an independent agency to administer the United States Office of Education. It recommended that the members of the board should be appointed for long overlapping terms by the President with the consent of the Senate and that the board should select a professionally qualified commissioner of education who would be responsible to the board.

Attacks on Textbooks. The textbooks adopted by the typical American school determine the aims, the scope, and the content of the instruction. In recent months there has been uneasiness in some quarters lest textbooks in the schools contain subversive material. The Board of Regents of New York moved to put such fears at rest by establishing a commission to examine specific complaints directed against specific books. The new commission will have a genuine opportunity for service—by providing a check against masked influences, and in a hardly less important way by clearing the air of suspicions found to be baseless.

Exchange Teachers. In September, 1951, 101 British teachers and seven teachers from France exchanged positions for one year with American teachers in 32 states. The 1951-52 interchange of teachers marked the sixth year of this international goodwill promotion program during which more than 1,200 teachers from abroad exchanged places for a year with American teachers. Other countries with which teacher exchanges have been effected are Canada, Belgium, Luxembourg, Norway, The Netherlands, Austria, Italy, Australia, and New Zealand.

Intercollegiate Athletics. Within the past year intercollegiate athletics came under attack, both from within and without the colleges. The scandals reported in the press extended from bad recruiting practices, deceptive subsidization, and from the falsification of academic records of college athletes to the actual bribing of college players to throw games. It has long been recognized that college football and basketball have become big business in many institutions. It appears, however, that college faculties and administrators sometimes have failed to consider implications of the increasing professionalization of their athletic programs. This past year college faculties, administrative officers, and boards of control were urged to review their intercollegiate athletic operations and to take such steps as would (1) eliminate the growing commercialization of intercollegiate athletics; (2) preserve the traditional amateur status of intercollegiate games; (3) strengthen the character-building objectives of well-conceived athletic programs; and (4) increase the confidence of faculties and citizens in the financial administration of athletic programs.

Industry and Education. In October, 1951, the National Association of Manufacturers approved a resolution on support of educational institutions, which declared that a system of education which includes both privately and publicly supported schools, colleges, and universities, is essential to the perpetuation of the American way of life. The resolution proposed that "business enterprises must find a way to support the whole educational program effectively, regularly and now." For higher education it urged its members to exert every effort to make available the "supplementary private financial support essential to meet the educational needs of our youth, American industry, and the nation."

Professional Organization. The American Association of School Administrators (1201 16th St., N.W., Washington 6, D.C.) in 1951 continued co-sponsorship of the expanded Cooperative Program in Educational Administration (initiated by AASA and financed by the W.K. Kellogg Foundation), a training program for superintendents of schools under way at eight selected schools of education; held four regional "drive-in" conferences for community school administrators; sponsored the fifth annual conference of presidents of state associations of school administrators, including a joint session with the Education Writers Institute; held its 77th annual convention in Atlantic City, attended by 15,000 persons, who heard distinguished lay and professional speakers, discussed current school problems, and viewed the comprehensive exhibits; made available in a 35 mm filmstrip the photographic record of the School Building Architectural Exhibit at the 1951 convention; published its 29th yearbook, "Conservation Education in American Schools," an administrator's guide in developing a functional program of education for the wise use of natural resources; sent to press its 1952 yearbook, "The American School Superintendency"; published "Lay Advisory Committees" and "The Superintendent, The Board, and The Press," two special pamphlets in the current series on issues confronting superintendents and boards of education; continued its research activities, including the Education Research Service which is operated jointly with the NEA Research Division.

National Education Association. The Research Division makes a biennial salary survey of salaries paid to school employees and salary schedules in city-school systems. The current survey is for the school year 1950-51 and data were summarized in Research Bulletins issued in the spring of 1951. In addition, detailed salary tabulations are issued at $5 per copy.

U. S. Office of Education, Federal Security Agency. This agency collects statistics from the states on the status of education and publishes a biennial survey of education. It releases in planographed form advance statistics on state systems. The Office also publishes numerous survey and research studies on local and state school systems.

Public Libraries

Developments in 1951

By S. Janice Kee

Executive Secretary, Public Libraries Division, American Library Association, Chicago

THE role of municipal as well as county and regional public libraries in adult education received special emphasis during 1951. This was largely due to the celebration of the American Library Association's 75th anniversary which centered around the theme, "The American Heritage in Times of Crises." National Library Day was proclaimed October 4, 1951, by many governors and scores of mayors. In addition to an historical celebration in Philadelphia commemorating the founding of the ALA, nationwide adult discussion of our American Heritage was initiated in public libraries as the best method of reaching a good cross section of voting Americans.

Financed by a grant of $150,000 from the Fund for Adult Education, established by the Ford Foundation, public libraries conducted discussion programs on the background of the American Heritage and its application to today's problems.

Six different types of public libraries in widely different communities were chosen for the original demonstration: New York Public Library for a large urban Eastern area; Denver Public Library for a medium-sized city in the Mountain-Plains region; Los Angeles County Public Library for a rural-urban county unit on the West Coast. In the midwest the LaCrosse, Wisconsin, public library was chosen for a small city library; Athens, Georgia, regional library for a multi-county public library unit; and in New England the Vermont Free Public Library Commission for statewide library service.

Trained discussion leaders assisted in establishing the program through neighborhood or functional groups, all stimulated by a common background of reading and or visual materials. By the close of 1951 approximately 70 discussion groups had been organized in public libraries to explore the American Heritage, and more were evolving.

In addition to the discussion groups, public libraries featured three books published in connection with the ALA 75th anniversary. They were "This American People" by Gerald W. Johnson, "Living Ideas in America" by Henry S. Commager, and "Birthdays of Freedom," a book for children, by Genevieve S. Foster.

National Library Day. Commemorating National Library Day, mayors, citizens and the press paid high tribute to their municipal public libraries. The New York Times devoted a special column to the occasion as did other papers in editorials and feature articles.

Guided tours and glimpses "back stage" for patrons marked the celebration in the Brooklyn Public Library. Boston's celebration extended through October and November with a series of lectures on "Our American Heritage in Music." In Minneapolis the Public Library Friends organized the National Library Day program. On Long Island 26 libraries jointly sponsored big display advertisements featuring library service.

The Library Club of Cleveland and vicinity made citizens library day conscious by a record of 23,300 bookmarks and 24,596 special booklists distributed; 900 show cards and posters displayed, 15 proclamations signed by 15 Cuyahoga County mayors; two 15-minute radio programs and spot announcements to eight stations; publicity, including the proclamations in three Cleveland dailies, 12 suburban papers, and civic club bulletins; open house in 12 branch libraries. In the Terminal Tower lobby an estimated 10,000 persons saw a color display prepared by the Cleveland Public Library. Hundreds of other public libraries joined in less elaborate celebrations.

Cooperative Activities. Benefits of cooperation and joint service programs are coming to be more widely recognized by municipal officials, library boards, and librarians. The Western Massachusetts Library Federation covering 12 towns centering around Conway, established for demonstration purposes on October 1, 1950, was assured of continuation by March, 1951. A meeting of citizens agreed that residents of the area had had no idea that library services such as offered by the federation existed The federation concentrates on professional services—working with groups, and making available to clubs and schools within the 12 towns the type of service that is offered by large urban libraries through staff specialists. Funds donated by Marshall Field will be available through 1952, but a citizens committee in each town has been established to assure continuation of federation services through local support.

New York State's regional library service center, having served 52 public libraries in three counties with books, films, other library materials and professional services, from its headquarters in Watertown, was continued by the New York State legislature as a permanent organization rather than an "experiment" as heretofore. Provision was further made for the continuance of the bi-county demonstration of public library service in Wisconsin (Door-Kewaunee counties).

Municipalities in various parts of the country, notably in Georgia and Mississippi, joined county governments in establishing multi-county or regional libraries. The organization of more regional libraries was hastened by the continuing influence of the Public Library Inquiry, a study conducted by the Social Science Research Council in 1949 through a grant provided by the Carnegie Corporation of New York. Several state and municipal library surveys were made and interpreted in the light of the facts revealed in the Inquiry. These included surveys of the public libraries in Kirwood, Missouri, and Alexandria, Virginia. The last two volumes of the 12-volume survey of the Los Angeles Public Library also were published. The Pennsylvania Library Association issued a preliminary report of its survey, entitled "How Good are Pennsylvania's Public Libraries?"

Legislation. During the first session of the 82nd Congress a new Library Services Bill to promote and improve public library service was introduced (S. 1452). This bill, designed to stimulate the states to further action by a demonstration of improved public library service that additional funds will give, provides a basic grant to each state of $40,000 a year for five years with more funds allowed, not to exceed a total of $ 7,500,000. The money would be available according to a variable matching formula based on rural population and per capita income, thus benefitting thousands of small municipalities in rural areas.

Active legislative programs were carried on by many states. Tennessee passed a law permitting the acceptance of federal aid for libraries. As a part of its "minimum foundation program for education," Georgia is the first state to use state-aid money for the salaries of public librarians, as is done for teachers with the same amount of training. State-aid appropriations showed some increases, particularly in Delaware, Georgia, and New York.

The Kansas legislature recodified the library laws of cities, counties, and townships. This law authorizes an increase in the tax levy of these political units for library purposes, sets up library bonds, and clearly defines the power and duties of library boards. The law authorizes the establishment of original libraries of two or more counties or two or more townships.

South Dakota authorized municipalities to tax in excess of the maximum levy allowed municipalities (but not in excess of two mills on the dollar) for the purpose of creating a municipal library fund. This money is to be used for the erection and remodeling of municipal library buildings.

Disasters. Fire and floods hampered public library service in Michigan and Kansas. In February, 1951, the Michigan State Library was gutted by fire and suffered a loss of over $4,000,000. This disaster directly affected the state's public library service as the state library loaned thousands of books annually to municipal and county public libraries. Reference and research service was resumed after a comparatively short interval through the cooperation of the Detroit Public and other libraries in the Michigan area. Teletypes were used to expedite the loaning of much needed books.

Kansas libraries suffered heavily during the July floods. Thanks to the Governor's Library Rehabilitation Committee, which publicized the loss of books and asked for donations, about 24,000 books, predominantly adult, were contributed to the four small Kansas libraries at Marion, Florence, Barnard, and Solomon by October. The libraries in Abilene, Manhattan, and Kansas City's Argentine branch were also affected but better able to absorb their losses.

Audio-Visual Materials. The four-year film project of the ALA, financed by grants from the Carnegie Corporation of New York, ended in July, 1951. In comparing the first and last reports of the project, a marked increase in the use of educational films by public libraries is shown. In 1947, 3,044 films were owned by 14 libraries. These were used 8,445 times and seen by 462,206 people. In March, 1951, 17,032 were owned by 87 municipal, county, and regional libraries, used 48,470 times, and seen by 3,738,446 people. The libraries reporting had an appropriation of $ 200,763 for the acquisition of films during the year. There is noticeable trend towards more cooperative film circuits among public libraries in all parts of the country.

The Louisville Free Public Library was the recipient of the George Foster Peabody award "for the best public service by a local station," its FM radio station WFPL. This station, which was opened in February, 1950, was the first to be operated by a library.

Librarians continue to be interested in the use of television in libraries and have worked towards securing channels for educational television broadcasting.

Reading Needs and Mechanization. Public libraries actively supported the work of the Committee on Reading Development of the American Book Publisher's Council in 1951. The committee is vitally interested in the development of book use in urban and rural areas, library-community relations, and censorship problems.

Public librarians were also turning their attention in 1951 to further mechanization of library processes, including electrical and photographic charging machines, use of punched cards in the technical and cataloging processes of the library, and teletype for inter-library communication.

Gifts, Grants, and Buildings. The Hutchinson, Kansas,public library received a $10,000 endowment from a local resident for film service. A bequest of $26,000 in securities was given to the Enoch Pratt Free Library by Gilbert Coblens, a Baltimore merchant, for extending book service to handicapped children. In Plainwell, Michigan, a modern reading room was added to the city owned library building, made possible by a money grant from a former civic-minded resident. The Racine, Wisconsin, public library was the recipient of a gift of about $ 30,000 left by Dr. Luther N. Schentz as a memorial to his wife, Julia Anderson Schentz.

A grant of significance to public libraries was presented to the ALA by the Field Foundation when it allocated $15,000 for the work of the Committee on Intellectual Freedom. With the aid of this grant the committee will continue for the next two years its work on censorship problems which have arisen in some municipalities.

Among the new buildings completed in 1951 are the libraries of Bellingham, Washington; Cudahy, Wisconsin; Hamden, Connecticut; Hampshire and Wilmette, Illinois; Scarsdale and Hempstead, New York; Hutchinson, Kansas; Laurel, Delaware; Hayward, Long Beach (branch library), and Oakland, California; Miami, Florida; and Mount Vernon, Ohio. A number of other branch libraries were erected and numerous additions to main library buildings completed. At the close of the year, new municipal library buildings were under construction in Cincinnati, Grosse Pointe (Michigan), Monterey and San Diego (California), and Tacoma (Washington), as well as branch libraries in Detroit and St. Paul.

Two municipalities passed bond issues and one was defeated. LaCrosse, Wisconsin, voted for the third time in less than 15 years to issue bonds for the purpose of building and equipping a new branch library and the sum of $120,000 was assured. Hartford, Connecticut, voters approved the construction of a new central library to cost $2,700,000. In Lima, Ohio, the first attempt to pass a library bond issue failed when voters turned down a request for $800,000 for a new library building.

Library Needs. The 1951 edition of the American Library Directory, published by the R. R. Bowker Company, revealed that 1950 book budgets were in excess of $50,000,000. Of this amount about $10,000,000 were spent by public libraries. Although not all libraries supplied budget figures, the directory indicates that 3,773 public libraries had more than $2,000 per year for books and periodicals, and 1,750 (most of them located in small municipalities) had less than $100.

The total inadequacy of such book budgets is more sharply focussed when placed beside the increases in book prices. Excluding the 25-cent reprint books, average book prices in 1951 were $4.25 or 32 per cent above the 1941 price of $3.26. Fiction books averaged $3.03 in 1951 as compared with $2.58 in 1941; history books $5.68 as compared with $3.89; and biography books $4.03 as compared with $3.30 in 1941. The average price of fiction best sellers in 1920 was $1.92 and in 1930 it was $2.35. Faced by such serious cost increases, as well as the continuing need to bring library salaries more in line with those of other municipal departments, the most pressing need for public libraries today are wider opportunities of cooperation. Examples of such cooperation may be seen in the Western Massachusetts Library Federation, the New York State Regional Service Center plan, the Erie County Public Library serving Buffalo and 25 other libraries, the Wisconsin bi-county library demonstration, the regional libraries of Georgia, Mississippi, Washington, and elsewhere.

Cooperation in eliminating a duplication of activities, such as the technical processes in buying, cataloging, and the mechanics of book preparation, as well as use of professionally trained librarians over a wider area will help to bring library service of high quality to other municipalities.

Professional Organization. An outstanding tribute paid public libraries as reflecting the American way of life was the choice of an American public library as a gift from the United States government to the people of Berlin. Five million German marks ($1,200,000) have been given for the establishment of the American Memorial Library to honor flyers who lost their lives in the Berlin air lift. The library, to be built in 1952, will represent the best traditions of public librarianship in its collection of materials, selection of staff, and design of the building.

On September 4, David H. Clift became executive secretary of the American Library Association (50 East Huron Street, Chicago 11), succeeding John Mackenzie Cory. Mr. Clift brought a background of varied and successful experience to his new position, having been connected most recently with the Yale University and New York Public Libraries.

Sources of Information: Libraries

Sources of Statistics: Libraries

U. S. Office of Education, Federal Security Agency. Once in four years this Office collects and publishes annual statistics on all types of public libraries, including county and regional libraries. The last such publication contains statistics for 1944-45. The next general collection was made in 1950 for the fiscal year which ended during the period July 1, 1949 to July 30, 1950. The Office also collects and publishes annually much more selected statistical information from libraries in cities with 100,000 population or over.

State Library Agencies. Many state library agencies compile annual statistics for the public libraries of the state.

Municipal Law and Courts

City Legal Problems in 1951

By Charles S. Rhyne

General Counsel, National Institute of Municipal Law Officers, Washington, D.C.

THE matters of municipal trade barriers, taxation and revenue, measures designed to eliminate subversive persons in public employment, civil liberties problems, and zoning and planning powers were among the most important municipal problems confronting the courts during the past year. This review will consider some of the leading cases interpreting municipal powers in these important fields.

Municipal "Trade Barriers." The state courts and especially the United States Supreme Court had a very heavy calendar in the field of municipal trade regulation during 1951. The resulting decisions do much to clarify the permissible limits of local control over business.

One of the first cases to be decided by the Supreme Court in 1951 involved an ordinance of Madison, Wisconsin, which required milk to be pasteurized within five miles of the central square of the city, and prohibited the importation of milk from a radius of more than 25 miles distance from the city. The majority of the court, while recognizing that local sanitary regulations were within the sphere of municipal police power even though interstate commerce may be affected, held that the ordinance was invalid as a trade barrier as applied to an Illinois corporation producing and processing milk and milk products in Illinois under similar sanitary regulations and inspections by the city of Chicago.[1] A similar result was reached by the Texas Court of Civil Appeals, where milk was delivered from within the state and inspected by another Texas city.[2]

The so-called "Green River" type of ordinance came directly before the Supreme Court for the first time and was upheld against the appellant's contention that it violated the due process clause of the 14th Amendment, the commerce clause, and the guarantees of the First Amendment of freedom of speech and press made applicable to the states and their political subdivisions by the 14th Amendment. The appellant, a resident of Texas, was in charge of a crew of solicitors who went from house to house soliciting subscriptions to nationally known magazines in violation of the ordinance of Alexandria, Louisiana. The majority of the court, in holding that there had been no abridgement of freedom of speech or press, stated at 71 S. Ct. 934: ". . . It would be, it seems to us, a misuse of the great guarantees of free speech and free press to use that guarantee to force a community to admit the solicitors of publications to the home premises of its residents. . ."[3]

[1] Dean Milk Co. v. City of Madison, 340 U.S. 349, 71 S. Ct. 294. See generally NIMLO Report 37, "Municipal Legislative Barriers to a Free Market."

[2] City of Port Arthur v. Carnation Co., 238 S.W. (2d) 599, 10 Municipal Law Court Decisions 62 (1951).

The Supreme Court of Oregon upheld a similar Green River ordinance prohibiting doorbell ringing by uninvited salesmen, as against similar constitutional arguments relying upon this United States Supreme Court decision. The plaintiff in the Oregon case was a vacuum cleaner salesman making sales himself and through salesmen who purchased from him for resale to occupants of private homes.[4]

The Supreme Court of Michigan held an ordinance of the city of Pontiac which limited the size of gasoline price signs at filling stations was an unreasonable interference with private business in violation of the 14th Amendment.[5]

An ordinance of the city of Lincoln, Nebraska, which prohibited any business activity on Sunday by grocery stores, meat markets, etc., but exempted drug stores, restaurants, cigar stores, ice cream parlors, fruit stores and related businesses, was held by the Supreme Court of Nebraska to be invalid as unduly discriminatory.[6] But the Supreme Court of the United States upheld New York's statute which prohibited public selling on Sundays (with enumerated exceptions) as applied to an adherent of the Orthodox Jewish faith who observe Saturday as the Sabbath day.[7]

Religious Liberty. Three cases coming before state courts involving the denial of the use of public school buildings for meetings by Jehovah's Witnesses, a religious society, were decided favorably for the school or other regulatory authorities. Two of the cases in California involved the denial of permits by school authorities to conduct religious meetings in school auditoriums. The court held that the society did not come within the meaning of the Civil Center Act of California which limited use of such auditoriums to associations formed for recreational, educational, political, economic, artistic or moral activities. Petitioners alleged abridgement of freedoms of assembly, speech and worship and denial of equal protection of the laws.[8] The United States Supreme Court dismissed the appeals in both cases for want of a substantial federal question.[9]

A similar result was reached by the Supreme Court of Pennsylvania on similar facts. The court held that the board of school teachers possessed adequate authority to determine which groups could use its buildings, and that its discretion had not been abused through denial of such use for conducting religious activities.[10] The United States Supreme Court dismissed the appeal for want of a substantial question.[11]

The model ordinance regulating the use of sound trucks, drafted by

[11] 341 U.S. 913, 71 S. Ct. 737 (1951).

NIMLO,[12] was upheld by the Supreme Court of the United States on January 14, 1952. The ordinance had been adopted by Allentown, Pennsylvania, and the attack on the ordinance had been made by Jehovah's Witnesses.[13]

Three other decisions were handed down by the United States Supreme Court respecting the problem of local governments attempt by different methods to balance the rights of free speech as guaranteed by the First Amendment, with the interests which the community is charged with protecting. The first of these involved the arrest and conviction of two members of Jehovah's Witnesses for speaking in the public park of the City of Havre de Grace, Maryland. The park Commissioner and city council had denied the group a permit although there was no ordinance covering the subject. The court held that since the action by the commissioner and the city council lacked any standards to govern the permit issuing practice, denial of the permits was a violation of the Fourteenth Amendment.[14]

The second case involved the denial by the New York City police commissioner of a permit to a clergyman desiring to preach on the streets. The court relied on the same ground as in the Havre de Grace decision in reversing the conviction, holding that there were no appropriate standards to guide the commissioner's action. The court ignored the quality of his speech which had clearly caused disorders in the past and the "clear and present danger test" which according to the testimony had been violated by his insulting or fighting words in denouncing other religions.[15]

Freedom of Speech Limited. The Supreme Court upheld the conviction for disorderly conduct of a university student who delivered a speech to a mixed group of white and colored people through a loudspeaker system from a box on the sidewalk in Syracuse, New York. He made derogatory remarks concerning public officials and urged the Negroes to rise up in arms and fight for equal rights. The police, who had been present during the speech, requested him to stop when the crowd became restless and had reached the point of possible violence, but he ignored the requests. The court in holding that the "clear and present danger" test applied stated as follows: "It is one thing to say that the police cannot be used as an instrument for the suppression of unpopular views, and another to say that, when as here the speaker passes the bounds of argument or persuasion and undertakes incitement to riot, they are powerless to prevent a breach of the peace. . ."[16]

City Officers and Employees. The United States Supreme Court decided a case of great importance to the orderly conduct of government during the past year. The case is very important not only to local communities but to the national welfare as well. It involved an ordinance of Los Angeles, California, which required all officers and employees to take a loyalty oath and sign an affidavit stating whether within the five years prior to the adoption of the ordinance he or she had advocated or taught the overthrow of the government of the United States or of the state of California, or had been during the same period, or presently was, a member of the Communist Party of the United States. The majority felt that the city is not constitutionally precluded from inquiring of its employees as to matters that may prove relevant to their fitness and suitability for public service, and that past conduct may well relate to present fitness and past loyalty may have a reasonable relation to present and future trust.[17]

[14] Niemotkov v. State of Maryland, 340 U.S. 267, 71 S. Ct. 325, 95 L. Ed. 267.

[15] Kunz v. People of the State of New York, 340 U.S. 290, 314, 71 S. Ct. 312, 328, 95 L. ed. 280 (1951).

[16] Feiner v. People of the State of New York, 340 U.S. 315, 331, 71 S. Ct. 303, 328, 95 L. Ed. 267, 295 (1951).

Another decision of the United States Supreme Court upheld the right of the Baltimore city board of supervisors of elections to refuse to place the name of a person on the ballot as candidate for municipal office until the applicant had fully complied with the Maryland Subversive Activities Act, known as the "Ober Law." The court upheld the Act after receiving the assurance from the Maryland Attorney General that he would advise the proper authorities to accept an affidavit based on the following qualification stated by the Court". . . that to obtain a place on a Maryland ballot a candidate need only make oath that he is not a person who is engaged 'in one way or another in the attempt to overthrow the government by force and violence,' and that he is not knowingly a member of an organization engaged in such an attempt."[18]

Zoning. The continued growth in population of municipalities during the past ten years, as reflected in the 1950 federal census, brings into focus the tremendous importance of a re-examination by city planning and zoning officials of their present existing zoning conditions and provisions necessary to remedy the situation. The courts have handed down a large number of decisions and only a few noteworthy cases will be reviewed here as illustrative of some of the trends in this important field.

A New Jersey lower court held that a provision in the ordinance of Wayne Township which required a minimum size of 768 square feet for one-story residential dwellings invalid as not being reasonably related to health and welfare. The case is now before the Supreme Court of New Jersey.[19] A similar provision in a zoning ordinance of Oakland Township, Michigan, requiring a minimum area of 800 square feet for residences and a minimum site area of three acres with at least 264 feet of frontage was held invalid by the Supreme Court of Michigan.[20] A similar result was reached by a Florida court invalidating a zoning ordinance provision requiring a minimum front footage for single family residences of 75 feet throughout the village as applied to an owner who acquired title to a 50 foot lot prior to the enactment of the ordinance.[21]

The Supreme Court of North Carolina held that acquiescence in and issuance of occupational license by city officials for operation of a business in violating of zoning restrictions for nine years prior to attempt to enforce said provisions did not stop the city from enforcement of the zoning ordinance.[22]

[20] Hitchman v. Oakland Township, 329 Mich. 331, 45 N.W. (2d) 306 (1951).

[21] Miami Shores Village v. Ellis, 53 So. (2d) 324 (Fla., 1951).

The Supreme Court of Mississippi recently upheld a provision in the zoning ordinance of the city of Gulfport prohibiting the restoration of nonconforming buildings damaged more than 50 per cent of its fair value, and held that such a provision was applicable to a building destroyed by a hurricane.[23]

The Supreme Court of New York rendered a very narrow and disappointing decision recently in which it held that the city of Buffalo could not, under its zoning ordinance, enjoin the operation of freight and truck terminals in business districts. The court held that the ordinance being in derogation of the common law must be strictly construed and that the city council in 1926 when the ordinance was adopted could have had in mind prohibiting only "railroad freight terminals" within business districts.[24]

The Court of Appeals of New York upheld an amendment to the Tarrytown zoning ordinance providing for "floating districts," in which it gave a very clear-cut definition and distinction of "spot zoning" in relation to the use of floating district provisions in zoning regulations.[25]

Taxation and Revenues. The best summary of activity in this field is reflected in the court decisions involving not necessarily new fields of taxation but those decisions which offer important guideposts for the municipal attorneys in meeting attacks on revenue producing powers of their respective cities.[26]

One of the more interesting decisions involved the power of the city of Bessemer, Alabama, to combine its police power and taxing power to levy a license tax which would discourage, and to all practical purposes prohibit, persons from engaging in the occupation of fortune telling. The court held that fortune telling was a useless occupation and the city could either prohibit or regulate it by placing a license tax upon the occupation which would eliminate its profit potentialities.[27]

A decision involving unique subject matter was handed down by the Florida Supreme Court. The state of Florida statute establishing advertising tax districts and authorizing special taxes for the privilege of advertising advantages and facilities and products in these districts was upheld. The court held that the statute was a valid exercise of the state legislature's powers and that the advertising tax for state, county and municipal purposes could be lawfully imposed.[28]

The determination of the effective date of the federal statewide census led to a very substantial and surprisingly happy result for the city of Dearborn, Michigan. The city of Detroit brought an original mandamus proceeding to compel the state commissioner of revenue to make state 1950 and later distributions of sales tax and intangible tax collections to local governmental units on the basis of the 1940 federal decennial census. The city of Dearborn, due to its rapid growth over the past 10 years, took the same position as the state commissioner in contending that the 1950 census figures be given effect as of April 1, 1950, before the official promulgation of the results of the 1950 census figures by the director of census had been made. When the state supreme court decided in favor of the state commissioner and the city of Dearborn's contentions, that city received not the expected $65,000 but $324,000.[29]

The Supreme Court of Arkansas upheld a very unique ordinance of the city of Dierks which provided for the collection of an annual sanitation tax of $4 from each business house and dwelling in the city for the purpose of controlling disease through use of an insecticide fog throughout the city three times annually. The court held that revenue collected for this purpose was not actually a tax but was within the police power of the city just the same as a charge for the collection of garbage and rubbish.[30]

Professional Organization. The National Institute of Municipal Law Officers (730 Jackson Place, N.W., Washington 6, D.C.) serves as a nationwide clearinghouse for municipal legal information. Monthly publications entitled "Municipal Law Journal," "Municipal Law Court Decisions," and the "Municipal Legislative Bulletin," periodic research reports on current topics of municipal legal significance are prepared, and a yearly volume entitled "Municipalities and the Law in Action," summarizing each year's legal developments are the published material of the organization.

A new project initiated in 1951 was the compilation and publication of a loose-leaf service entitled "NIMLO Model Ordinances." This is the first such service ever undertaken and it is believed it will fill a long-felt need. Included in the initial volume will be the 33 model ordinances published by the Institute in the past, most of which were in the research report series. The service will include new model ordinances to cover all important subjects of municipal regulation. The prior models will be constantly kept up to date so as to meet modern trends and to comply with court decisions. The service will be released in cloth-bound looseleaf volume to all members of the Institute and to other organizations and persons on a yearly subscription basis.

Part Five

DIRECTORIES OF OFFICIALS

The City-Manager Profession and Directory

Directory of Officials in Cities Over 10,000

Mayors and Clerks in Cities 5,000 to 10,000

The City Manager Profession and Directory

A summary of the city manager profession for 1951 furnished further evidence in support of the trend toward a professional career in municipal service at the management level.

Appointments. More than one-half (55 per cent) of all city managers appointed in 1951 had been managers in other cities, administrative assistants to managers, or students in public administration serving as interns in manager cities. In 1939 less than one-fourth (23 per cent) of total manager appointments came from these sources. In the decade 1940 to 1949 this figure was 34 per cent and in 1950 it was 52 per cent.

In 1951 four out of every five managers appointed were city managers in other cities, assistant managers, or were holding some other governmental position—mainly engineers, finance officers, city clerks, and other city department heads. Thirty-two managers, or 14 per cent, came from nongovernmental positions as compared with 17 per cent in 1950 and 27 per cent in 1939.

It would appear that city councils tend to select as managers men who have had training in public administration, offered by a growing number of colleges and universities, and that fewer appointments are being made from nongovernmental fields. The 31 assistant city managers appointed in 1951 received their public administration training at 16 different universities. Of the 32 appointments made from nongovernmental positions in 1951, 25 came from business and industry.

Another recent trend worthy of note is that for the past two years approximately three-fourths (76 and 74 per cent, respectively) of all city manager appointments were from outside the city, as compared to 58 per cent for the decade 1940 to 1949 (see Table 1).

Separations. A total of 111 city managers were separated from the service in 1951, representing a turnover of 11.7 per cent as compared with 12.6 in 1950 and 13.9 per cent in 1949. Causes of separation were: 11 died, 31 were either dismissed or resigned (subsequent position unknown), 19 resigned to enter private industry, 10 retired, six went to other governmental positions, two went to quasi-public positions, six left because of ill health, nine entered military service, six left for miscellaneous reasons, and for 11 their reasons for leaving are unknown.

Tenure. With fewer separations from the service the tenure of managers is lengthening. The average tenure of managers leaving the service in 1951 (exclusive of those with less than two years service) was 9.7 years as compared with 8.9 years in 1950. The long tenure of the managers who either died in office or were retired during the year gives conclusive evidence of a developing professional group within the Association. The 21 managers who died or retired had a total of 357 years of managerial experience or an average of 17 years per manager. Two managers had more than 30 years tenure, three from 25 to 30 years, five from 20 to 25 years, and seven had less than 15 years.

Salaries. Salary data for city managers in cities over 10,000 population are shown in Table VI. For 185 reporting cities between 5,000 and 10,000 the average salary in March, 1952, was $6,273, an increase of 8 per cent over 1951. The lower quartile was $5,400, the upper quartile $7,100, and the median $ 6,000. For 172 reporting cities with population of less than 5,000 the average salary in March, 1952, was $4,802, an increase of 8 per cent over 1951. The lower quartile was $3,900, the upper quartile $5,400, and the median $4,800.

TABLE 1

COMPARISON OF CITY-MANAGER APPOINTMENTS

	Ten-Year Period 1940-49 Incl.		For 1950		For 1951	
	No.	%	No.	%	No.	%
GOVERNMENTAL:						
Manager promotions from other cities	277	18%	71	29%	56	25%

UNKNOWN:	186	12	24	10	15	7
Total appointments	1,564	100	247	100	220	100
Appointments from outside city	803		170		152	
Per cent of outside appointments	58%		76%		74%	

Management Information Service. In 1945 the International City Managers' Association set up Management Information Service to answer specific inquiries on management problems and to issue special information reports monthly on timely management topics. This Service is made available to all local governments at an annual subscription fee based on population. By the end of 1951 a total of 713 towns and cities, of which about 50 per cent were under 10,000 population, were subscribers to this Service.

Twelve special information reports were published during the year and furnished to subscribing cities: Short-Range Economic Forecasting for Cities; Issuing Administrative Regulations; Pay Rates for Selected City Jobs in January, 1951; Meeting Competition for Municipal Employees; When and How to Use Outside Consultants; Organization for City Planning; Summary of Replies to Recent Selected MIS Inquiries; Planning for Snow and Ice Removal; Special Information Centers in City Halls; Financing

Sidewalk Construction and Maintenance; Administration of Licenses and Permits; and Administration of Regulatory Inspectional Activities.

Another feature of this Service, the answering of special inquiries from subscribing cities, covers a wide range of topics and deals with the more urgent problems that arise in towns and cities throughout the year. The number and urgency of such inquiries determine to a large extent the subject matter of the monthly reports. The Association answered from 50 to 75 special inquiries per month during 1951.

In-Service Training. The Institute for Training in Municipal Administration, conducted since 1934 by the International City Managers' Association at management and departmental levels, had by far its biggest year in 1951. There were 292 enrollments, almost entirely from local government administrative officers, as compared to 231 the previous year. In addition, 6,030 copies of the training manuals were sold for reference purposes, training and group discussion sessions by municipal employees, and to colleges and universities.

The increase in enrollments reflects the added emphasis the Institute is now placing on the training aspects of its program. The increased sales reflect in part the growing use that colleges and universities are making of the training manuals and also the fact that new editions of four of the eight manuals were published late in 1950.

City manager institutes were held in several states, usually in cooperation with the state university in connection with statewide city manager meetings. These states included California, Colorado, Florida, Kansas, Maine, Michigan, North Carolina, Oregon, and Virginia.

Professional Organization. The International City Managers' Association (1313 East 60 Street, Chicago 37) was organized in 1914. The membership is composed of municipal managers who are "administrative heads of municipalities appointed by their governing bodies. Of the more than 1,000 communities operating under the council-manager plan, on December 31, 1951, 750 were members. In addition there was almost an equal number, 742 persons other than managers, holding membership in the Association. The Association held its 37th annual conference at Poland Spring, Maine, in September with a total registration of 647, including 323 city, county, and town managers.

The purpose of the Association is to improve local government administration by encouraging city managers to administer the affairs of their communities in accordance with the best methods developed through research, practical application, and actual experience. Toward this end, the Association, in addition to conducting Management Information Service and the Institute for Training, publishes "Public Management," a monthly journal devoted to local government administration; the "Municipal Year Book," the authoritative resume of activities and statistical data of American cities; and a biweekly "City Managers' News Letter."

TABLE XVII

DIRECTORY OF APPROVED COUNCIL-MANAGER CITIES, AND CITY MANAGERS

1066 CITIES AND 17 COUNTIES AS OF MARCH 1, 1952

This directory includes all cities, villages, boroughs, towns, townships, and counties in the United States and its possessions and in Canada that have the council-manager plan. The figure following the city indicates the number of city managers to date. In the column headed "Plan" the letter "E" indicates state optional enabling act adopted by vote of the people; "H" home rule charter drafted locally and adopted by the people; "O" ordinance adopted by the city council and not submitted to people; "Oh" ordinance (initiative or other) approved by voters in local referendum; "Oe" ordinance passed by council putting into effect the provisions of optional state law providing for council-manager plan without local referendum; "S" special charter passed by the legislature without local referendum; and "Sh" special charter passed by legislature and adopted by people in local referendum. After the manager's name (M) indicates Member and (AM) Associate Member of the International City Managers' Association; the figure indicates he has served more than one city. After name of city "pl" indicates plantation, "t" town, "tp" township, "vil" village.

Directories of City Officials

THE three separate directories in this Year Book contain the names of nearly 10,000 municipal officials as reported by local officials in January and February, 1952. Table XVII on the preceding pages gives the names of city and county managers for all municipalities operating with this form of government. This table also shows the year the council-manager plan was made effective, the legal authority for the plan, the number of managers each city has had, the population of each city, the number of municipalities each manager has served if more than one, and the year of appointment to his present position. Table XVIII contains all incorporated places over 10,000 population arranged alphabetically by state and giving 1950 populations. This table gives for each city the mayor, city clerk, chief finance officer, director of public works, fire chief, and police chief. Table XIX lists all of the cities between 5,000 and 10,000 population by state, giving the name of the mayor and city clerk of each city. In Tables XVIII and XIX the year of expiration of the mayor's term is indicated. All urban places of 5,000 or more population are listed alphabetically by population groups with 1950 census figures in Table IV elsewhere in this Year Book. Council-manager cities in all of the following tables are indicated by an asterisk after the name of the city.

In all columns of Table XVIII, if there is no letter following the name the title of the individual is the same as in the column heading. The month and year the mayor's term of office expires are shown after the name of nearly all mayors. Under "Chief Finance Officer," the name shown is that of the administrative officer indicated as being chief finance officer by the official filling out the questionnaire. In this column a letter indicating the title of the individual follows nearly every name. Under "Director of Public Works," if no director was reported the name of the city engineer is shown, and if no engineer was listed the name of the superintendent or commissioner of streets is given.

The names of municipal officials not reported in this Year Book are available in most states in the form of special directories published by a state league of municipalities or a department of the state government. New and revised editions of directories issued in 1951 are listed under the new books and pamphlets section beginning on page 263 of this Year Book. There are also several directories with nation-wide coverage for airport managers, health officers, housing officials, librarians, waterworks superintendents, and welfare officials. Such directories generally are published by federal agencies or by national organizations of public officials.

Table XVIII

DIRECTORY OF CITY OFFICIALS IN ALL CITIES OVER 10,000: JANUARY, 1952

Code for Mayor:
B—Burgess
C—Chairman of Council
P—President or President of Council

Code for City Clerk and Finance Officer:
A—Auditor
C—Controller
F—Fin. Dir. or Comr.
K—City Clerk
M—City Manager
N—Accountant
R—Recorder
S—Secretary
T—Treasurer

Code for Director of Public Works:
E—City Engineer
M—City Manager
S—Supt. of Streets

An asterisk (*) indicates council-manager city, a dagger (†) acting official, "t" town, "tp" township

Directory of Mayors and Clerks in Cities of 5,000 to 10,000 Population

The directory of mayors and city clerks in all cities of 5,000 to 10,000 population is shown in Table XIX beginning on the next page. All of the 1,180 cities in this population group are shown by states, including a few cities that did not report. Council-manager cities in Table XIX are indicated by an asterisk after the name of the city.

Table XIX includes 87 towns in the New England states and townships in Pennsylvania and New Jersey that were not included in the 1951 Municipal Year Book. These towns and townships are not classified as incorporated places by the United States Bureau of the Census, but special rules have been established for defining the more urban of these towns and townships to be included as "cities" for this Year Book. The standards of selection used for designating towns and townships as "cities" are described in the governmental data section elsewhere in this Year Book. Towns and townships are indicated by "t" or "tp" in Table XIX and in other tables.

Table XVIII on the preceding pages shows all cities over 10,000 population arranged alphabetically by state with final 1950 populations. This table gives for each city the mayor, city clerk, chief finance officer, director of public works, fire chief, and police chief. This table includes 113 New England towns and Pennsylvania and New Jersey townships shown with "t" or "tp" after the name of each place.

All cities of 5,000 or more population are listed alphabetically by population groups with final 1950 census figures in Table IV elsewhere in this Year Book.

The names of municipal officials not reported in this Year Book are available in most states in the form of special directories published by a state league of municipalities or a department of the state government. New and revised editions of directories issued in 1951 are listed under "Municipal Government" in the new books and pamphlets section on page 263. There are also several directories with nationwide coverage for airport managers, health officers, housing officials, librarians, waterworks superintendents, and welfare officials. Such directories generally are published by federal agencies or by national organizations of public officials.

TABLE XIX

DIRECTORY OF MAYORS AND CITY CLERKS IN ALL CITIES OF 5,000 TO 10,000 JANUARY, 1952

Code for Mayor:
B—Burgess
C—Chairman of Council or Board
P—President of Council or Village President

Code for Clerk:
A—Auditor
R—Recorder
S—Secretary
M—City Manager

An asterisk (*) indicates council-manager city.
A dagger (†) indicates acting official.
Letter "t" indicates town and "tp" township.
